SHEFFIELD — *One minute walk from Town Hall*

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CINEMATOGRAPH APPARATUS

MOVIES with Colour.—The Illustrachome Multi-Colour Wheel will enable you to give your movies in a fully professional manner by introducing delightful chromatic and atmospheric effects.

YOU can present your feature opening with a blaze of glorious multi-tinting and then throughout the subject create a sense of reality that you have never before enjoyed; then at the end pass from sunset to twilight in restful conclusion.

YOU will be more than satisfied with the knowledge that you have given a perfectly artistic presentation by employing this aid to better movies.

6/- To fit all Projectors, including the B-200; post free.

CAMERAS, Projectors, Screens, Films; your inspection invited.

ILLUSTRA ENTERPRISES, 159, Wardour St., London, W.1. Gerrard 6889. [4123

SIMPLEX

AUTOMATIC DAYLIGHT-LOADING DEVELOPING TANK

For roll films (2¼×3¼ inches)

Is the latest and definitely the simplest tank yet obtainable. There are absolutely no spare parts whatsoever. Convenient loading in broad daylight, thereafter developing, fixing, and washing are done without removing the film from the tank.

Entirely constructed of bakelite, therefore proof against acids and easy to clean. NO APRON.
Price, complete with wooden box for storage, **37/6**

Write for full particulars of other priced tanks for Leica and V.P. sizes to the sole importers:

DUNSCOMBE'S "PERSONAL" CAMERA COLUMN

'SERVICE SUPREME'

ABOUT LOVE

Love is said by some to be funny stuff, and we all know that there are all kinds of love as associated with purely "platonic" affairs, crooners, mothers-in-law, and the love of a male for a female in species of the human race, as also among the birds, beasts and fishes. This is altogether a natural state of our everyday life—in fact, love enters our lives to no small extent, and can be considered the high-spot of modern conversation.

● ● ●

Cassell's Celebrated Pocket English Dictionary defines love as "A strong feeling of affection," and further goes on to say, "Be very fond of." This puts the whole thing in a nutshell and allows us to introduce love in association with photography and say we can supply you with a lovely camera, lovely films, lovely service—in fact, promise everything except lovely weather.

● ● ●

The love of a camera can be aptly applied to any of the famous miniature models such as the Leica Model III with Summar f/2 lens, or the popular Zeiss Super Nettel, not only for appearances sake, but as delightful apparatus to use. We should love to supply you with either of these instruments of precision, or for that matter, any other type of camera you require. Furthermore, we will go so far as to say that as apart from taking your old camera in part exchange and allowing you to pay the balance by "easy payments," we shall make you a customer friend of ours for all time—and won't that also be lovely?

OUR CORRESPONDENTS

No, COLONEL GUMP, it would be well-nigh impossible to swop your old sword and pair of spurs for a Rolleiflex. Wait till the next war.

GLADYS RITE asks if she could dye her hair in stale developer if it's one of the fine-grain types. Yes, Gladys, you can always try.

JONES JUNIOR writes from college to know if we can give him a formula by which he can make a fast pan. emulsion, and could he coat sheets of paper torn from The History of England.

S. HOLMES tells us he has discovered how to separate two exposures taken on one negative, and asks what is the invention worth. We replied: "Dear Sidney (not being sure his Christian name is really Sherlock),—Why not try the film makers? They might pay you well to keep your secret off the market."

A gentleman from the East End wants to buy a Zeiss Contax with Zeiss lens in perfect condition for not more than £2 10s. We have written to say so do we.

FLIGHT
AIRCRAFT ENGINEER AND AIRSHIPS

The First Aero Weekly in the World

All the latest developments in connection with aviation are recorded in the pages of "Flight."

Illustrated descriptions of new aircraft, aero engines and equipment, British and Foreign, appear regularly, as well as practical articles giving the latest information for Club members and amateur pilots.

"Flight" is the leading authority on aviation. It contains Royal Air Force news, and deals with the work of R.A.F. Squadrons, with Private Flying, and with Commercial Aviation, Airlines, and Airports.

A special staff of highly competent aerial photographers ensures that "Flight" contains the finest photographs of aviation in all its aspects.

For pictures that are pictures

use one of these Kodak Panchromatic Films

For the majority of your outdoor shots you need Kodak **"PANATOMIC"** Film. It has exactly the right balance of qualities super-fine grain (which results in surpassingly fine enlargements): anti-halation backing: fully adequate speed: and, of course, complete panchromatic sensitivity.

For those occasions that demand a film of extremely high speed—quick-action shots on dull days and all photography by artificial light—Kodak **SUPER SENSITIVE PANCHROMATIC** Film becomes your first choice. This is the film of lightning speed. It too, is anti-halation backed, and like "Panatomic" gives negatives of true, rich, panchromatic quality.

Both these famous Kodak Panchromatic Films are made in Roll Films and Film Packs.

Kodak Limited, KODAK HOUSE · KINGSWAY · LONDON · W.C.2.

WALLACE HEATON COMPETITION

FOR USERS OF 35-mm. STILL CAMERAS

for the best photograph submitted during the run of the competition £25 will be awarded

USERS OF LEICA, CONTAX, CONTAFLEX, RETINA, ROLLEIFLEX, AND ROLLEICORD

(if used with ciné film) can all compete.

Here is a new Competition, open only to users of cameras taking 35-mm. film as its negative medium.

The Competition is open from July 1st until September 30th. Your photographs can be of any subject—but they must be taken on 35-mm. film. Prints should not be smaller than 6 × 4 inches.

Any number of prints can be sent in in any one week, but each photograph must have the coupon attached. In addition to the big prize, a weekly prize of £1 1s. will be awarded for the best photograph submitted in that week.

Each photograph must have on the back a coupon as below, and the name and address of the sender, the make of camera and material used, exposure, etc.

For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. *In addition we are offering a special prize of £1 1s. per month for the best photograph submitted depicting a person or persons using a camera purchased from Wallace Heaton Ltd. All prints will be judged at the end of the Competition for the final prize of £25 cash. Acceptance of these rules and conditions is a specific condition of entry.*

NO ENTRANCE FEE!

COUPON which must be attached to your entry.

LEICA MODEL III

With f/2 Summar Lens.

Automatic focussing, 3 shots in 10 secs., anything up to 36 pictures one loading, double exposures impossible. For holidays, travel, or for photographs at night or in any weather, Leica is the ideal camera.

£39 : 10 : 0

Nine monthly payments of 92/2.

NEW RANGE-FINDER 'BESSA'

With coupled range-finder and optical view-finder fitted next to the focussing control. The famous trigger release is fitted under the base-board. Yellow filter is incorporated for use when required. Compur Rapid shutter speeded to 1/400th sec. With 4-element Skopar f/3.5 lens .. **£18:15:0**

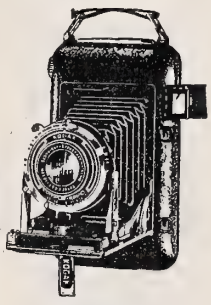
Nine monthly payments of 43/9.

NEW CONTAX II

Chromium-plated and black leather finish. Metal focal-plane shutter, delayed action, wind and release from top position, speeds from ½ to 1/1,250th sec., readily adjusted interchangeable lens mount. Combined distance and large view-finder.

With f/2.8 Tessar..... £43 5 0
With f/2 Sonnar £50 10 0
With f/1.5 Sonnar £65 15 0

Any model on easy terms.

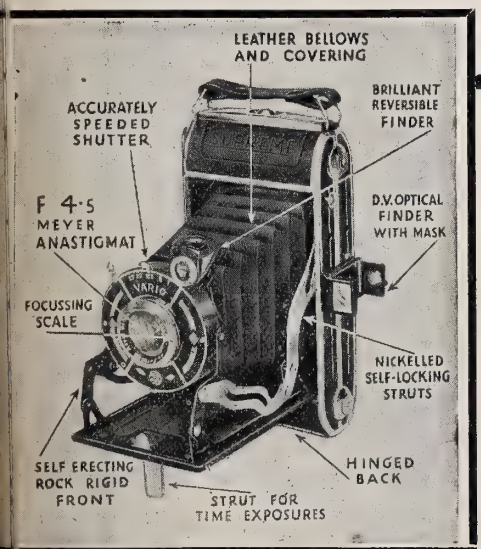


CINÉ-KODAK

You'll be sure of good results with this camera. Like every other 16-mm. camera, this model gives perfect results with the new Kodachrome colour film.

With f/3.5 lens **£13:13:0**

With f/1.9 lens **£18:18:0**



Nine monthly payments of 31/11 or 44/2.

KODAK "REGENT"

The latest model, taking 8 or 16 pictures on 3¼×2¼ roll film. Has coupled range-finder, optical eye-level finder, Zeiss Tessar f/4.5 lens, Compur shutter, speeded to 1/400th sec., complete with leather case.. **£20:0:0**

Nine monthly payments of 46/8.

The fast film with the fine grain

VOIGTLANDER

What it takes to make this BETTER "chrome" film

Voigtlander "Illustra" film is made to exacting standards. No fewer than six chemical layers are necessary to ensure that "Illustra" will remain highly sensitive, free from fog, anti-halo, scratch-proof and firm in processing. Then three outer protective wrappers are needed to make certain that "Illustra" is safe in your camera. Try this new and better film with its speed of 18°/10 DIN and its fine grain; the results will please you.

MINIATURE CAMERAS
A PART-EXCHANGE OFFER

The response to our previous advertisements in this connection has been almost more than we bargained for, and we may have to withdraw our offer in the near future. However, this week we again repeat it.

At this season of the year we find it sometimes difficult to obtain adequate stocks to cope with the great demand for guaranteed second-hand miniature apparatus. In an endeavour to cope with this seasonal shortage, we are prepared, in the case of customers considering the purchase of new miniature cameras such as the Leica, Contax, Exakta, Rolleiflex, etc., to quote really unprecedented part-exchange allowances on existing apparatus. We are particularly anxious, of course, to obtain the miniature cameras in which we specialise. However, in respect of any first-class apparatus not exceeding $3\frac{1}{2} \times 2\frac{1}{2}$ inches in negative size, our prices and allowances either for cash or for part-exchange will for a short period be higher than we have ever paid before. When replying, customers are requested to describe their apparatus as fully as possible, and to mark their letter or envelope, "Part-Exchange."

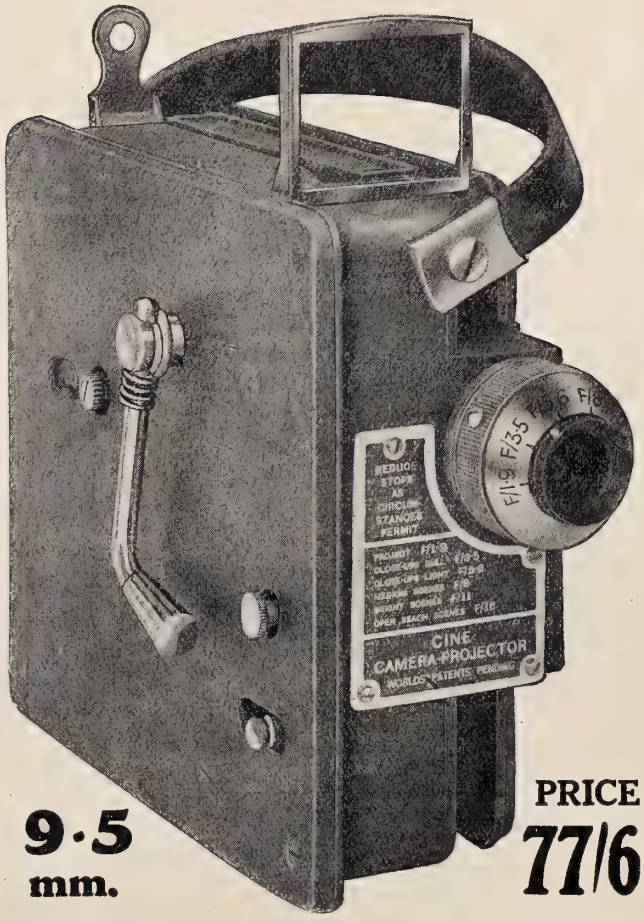
This anent LEICA—and the WESTMINSTER

● With just one and the same LEICA Camera you can do an infinite variety of work—covering virtually the whole range of photography. That, in itself, makes for much saving of time, trouble, space, labour in carrying, and cash. Thus, for the price of your LEICA you are gaining many advantages—advantages especially typical of LEICA.

● ● By a call at "the Westminster" you can learn with pleasure all that there is to know about LEICA. At the same time you can know how (readily and economically) you can Part-Exchange your present Camera for a LEICA, settling any balance Out-of-Income—or, of course, you can buy outright on that basis.



● ● ●

This is the LEICA Model IIIa, having shutter speeds up to 1/1,000th of a second, f/2 Summar lens, and, of course, completely automatic focussing. It costs £43, or can be acquired by 9 monthly payments of £5 0 4. There are other models from £16.

SELOchrome FILM PACK

Obtainable from photographic dealers in the following sizes: — $2\frac{3}{8}$ x $1\frac{3}{4}$, $3\frac{1}{4}$ x $2\frac{1}{4}$, $4\frac{1}{4}$ x $3\frac{1}{4}$, 9 x 12cm., 10 x 15cm.

Selo Hypersensitivé Panchromatic Film Packs are also available

and become as enthusiastic about this remarkable film pack as thousands of other keen amateurs. And no wonder for Selochrome has no equal for simplicity, certainty, and superlative results.

The tabs of Selochrome Film Pack are of varying length. It is almost impossible to pull the wrong tab, and each film is brought into position with ease and accuracy.

Selochrome Film Pack is completely light-tight and does not show trace of "fog," even on the edges of the films.

Films are kept ***absolutely flat*** and remain so when removed.

Films may be removed without opening the pack or taking it from the adapter.

WEDNESDAY, JULY 15TH, 1936.

Copyright—Registered as a Newspaper for transmission in the U.K.

VOL. LXXXII. No. 2488.

NEXT week's issue of *The Amateur Photographer* will be our Special Summer Number, and will deal, as its title indicates, with a great variety of those subjects and applications of the camera that appeal to the amateur during the summer months. It will be considerably enlarged, and in addition to a double number of Art plates will contain many extra pages of matter and illustrated topical articles. It is an issue in which every camera user will be interested, and we advise our readers to obtain their copies as early as possible. They will also be doing their photographic friends a good turn if they introduce it to their notice—especially to those about to take their holidays. An all-over cover in full colour will render "The A.P." Summer Number particularly attractive and difficult to miss on the bookstalls. Note the date of issue: Wednesday next, July 22nd.

"The A.P." Index.

Once more we have pleasure in informing our readers that the index is available for the last half-yearly volume—No. LXXXI, January to June, 1936. We have followed the usual practice of dividing it into three sections—Letterpress, Illustrations and Contributors. The first contains the titles of all articles, letters and replies to questions, with cross references where necessary; the second, the titles and authors of all illustrations appearing on the Art pages, including the beginners' prints selected for criticism; the third, the names of those who have contributed articles, letters or prints. The price of the index is 3d., by post 4d. The usual cloth binding covers are also available, and with a copy of the index included they cost 4s. 1d. post free. Both are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1.

TOPICS of the Week

HOLIDAY GREETING.

A striking snapshot at the coast, depicting the holiday spirit.

An Appeal from the British Museum.

Our readers during their holidays with the camera can render the British Museum a service and at the same time secure some interesting records for themselves. The Department of British Antiquities is organising a survey of Anglo-Saxon and Celtic sculpture in England, and is anxious to secure a comprehensive series of photographs of these relics to make a national collection. The Anglo-Saxon and Celtic crosses are often of great beauty and interest, and are widely distributed over the country. To those who have good negatives illustrating these carvings the Museum makes an appeal for prints; to those who are looking for subjects for their holiday activities, information will be gladly supplied as to the sculptures in the area to be visited. Close-ups of detail in particular are wanted urgently. All those who are able to help by sending prints or would like to hear of crosses to be photographed should communicate with Mr. T. D. Kendrick, Department of British and Mediæval Antiquities, British Museum, London, W.C.1.

Research on Illumination.

The "annual inspection" of the National Physical Laboratory drew a great concourse to Teddington the other day, and there were arranged for their edification equipments and demonstrations to the number of 900. One new development seen for the first time is a photometry

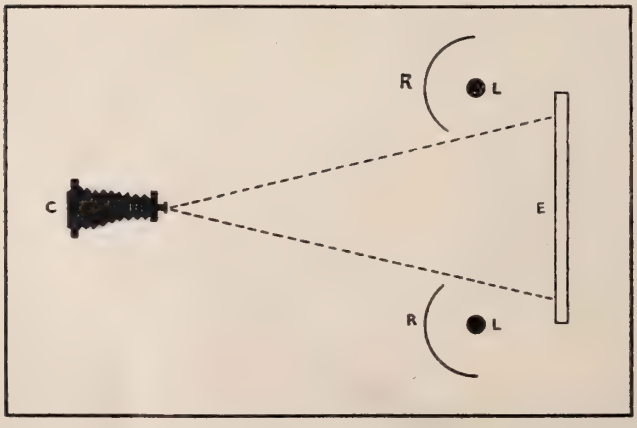
laboratory, which has been made necessary by the rapid growth of research into the problem of illumination. It includes a room 145 feet long for the measurement of different types of projectors, such as motor car head-lights, search-lights, and signals. Some work has been done on the recovery of the eye from the effect of glare. The study of the contraction of the pupil under a glaring source of light, and its gradual expansion again when the source has been removed has been made by a cinematograph film using infra-red radiation, which does not affect the phenomena investigated. Another new piece of work represented an investigation into the proper illumination for clerical work. This, too, depends upon the records made by a 9.5-mm. cinematograph camera capable of taking single exposures. The rather remarkable photographs include in each exposure the reading of an electrical instrument, the time, the date, the distinguishing number of the person whose action in switching on the light automatically causes the exposure to be made, and also whether the general lighting is in operation in the room he occupies as well as his separate desk light. For this investigation eighteen typists occupying positions at different distances from the windows are being taken as subjects.

Yellow Lights.

The French Government has been recommended by a technical committee to make the use of yellow lights for motor car head-lamps compulsory. Thereupon the Ministry of Transport in Great Britain has asked the British Medical Association to look into the matter, but that medical body finds no ground for any definite recommendation. The yellow light is said to be superior to white because of the improvement in visual capacity which it gives, but on the whole the expectations of improved vision in these conditions have not been realised. Every photographer knows that the interposition of colour filters causes a lowering in visual acuity. As for appreciation of differences of brightness contrast there is some indication that at low illuminations yellow is inferior to all colours except red. One worker has given the colours in the following order of merit: green, yellow, red, and blue. As for giving increased perception of colour and accentuating certain tints, it seems pretty clear that yellow light would rob the eye of one of its most important aids in the recognition of objects. There would be great difficulty, for instance, in recognising the colour of the globe of a Belisha beacon under the yellow illumination of the sodium discharge tube. At the same time, many motor car drivers do prefer yellow light. Their preference is probably psychological, which merely means that it is not understood.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.



Copying Arrangements.

I frequently have to copy photographic prints, any size up to whole-plate, and am hampered by the uncertainty of the exposures. I use a double-extension quarter-plate camera, with f/4.5 lens, and dark slides. Is there any easy way of standardising exposure with some form of artificial light? E. L. (Totnes.)

To do copying successfully requires considerable technical skill, but it can soon be acquired, and it is a very great help to standardise the procedure as far as possible. Probably this can be done more easily by artificial light than otherwise.

To begin with, your apparatus sounds suitable for the purpose, as a focussing screen is practically indispensable, and a large aperture is an advantage in arranging and focussing the print, although it is generally advisable to stop down a little for the actual exposure.

The diagram reproduced herewith gives an idea of the layout, which may be arranged on a table or a large board.

The easel, E, should of course be large enough to take the whole-plate prints, and whatever the size of the prints they should be fastened up centrally on the easel. The camera, C, should be firmly supported so that the lens is exactly opposite the centre of the easel. The back of the camera must be perfectly parallel with the face of the easel. It is best to keep the easel fixed, but to make some arrangement for sliding the camera backwards and forwards without losing parallelism.

You do not say what light you have available. It is quite possible to use a couple of paraffin wax candles, one on each side and to the front of the easel, as at L L. Electric lamps, say of 40 or 60 watt power, are better. The lights should be level with the middle of the easel, and it is best to keep them always in exactly the same position, whatever the size of the print. Any variation in position or distance will materially affect the lighting.

One lamp can be used instead of two, if half the exposure is given with it on one side, and the remainder with it on the other.

Reflectors, R R, can be made with two pieces of white card, bent into a curve with pieces of thin string at top and bottom, and stood on end. They serve two purposes: to reflect light on to the print, and to screen the light from the lens. They must be just out of the " line of fire " as shown by the dotted lines.

We should advise you to use the same brand of plates always, and you will find a fine-grain ordinary as good as any.

You must take into account the change in the value of the f/ numbers of the stops according to extension. Focus the lens on a distant object and measure the distance from stop to screen. Suppose this is 5 in., and that when making a certain copy you find it is 9 in. What is then the value of f/8 ?

$$5 : 9 :: 8 : x = 72 \div 5 = f/14.$$

A similar simple sum meets all cases.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

The Exhibition Print

Those photographers who intend to submit their best work for the autumn exhibitions will be well advised to consider the matter without delay. The following article gives some hints upon important matters that should receive attention.

IT is the ambition of most keen photographers to see their work upon the walls of the leading exhibitions. None will deny that there is great satisfaction in having work accepted, and all successful photographers are aware of the value of submitting their best work to the selecting committees of the leading shows as a test of progress. Regular submission of work is a test of ability, and also an indication that the standard once reached is maintained.

It is a wise course for any photographer who decides to submit work to the selecting committees of the two important exhibitions that open in September, that of the Royal Photographic Society and the London Salon of Photography, to give immediate consideration to the entry.*

It is possible that last-minute efforts may be accepted, but it is far more likely that the photographer who starts in good time and gives consideration to the subject from every angle, with a view to producing the very best possible print, will reach the desired objective.

There is the advantage that prints produced in good time may be lived with, and given careful study. It frequently happens that faults which are not evident at the time of production are seen after a little time, and it is a fact that faults that may escape attention in the case of a last-minute production, become noted after longer acquaintance, especially if the photographer has cultivated the faculty of stern self-criticism.

Two Courses Open.

The photographer who aspires to produce an exhibition print has two courses open. He may examine his collection of negatives, putting aside those that show promise, or he may make a direct effort at the production of an exhibition print that will carry out a preconceived idea. In the latter case there is the advantage that the subject may be studied, under different conditions, and if necessary repeated exposures made, until the right kind of negative is obtained.

Essentials.

The would-be exhibitor will do well to consider the qualities that are looked for by selecting committees. Every picture must reach a high standard of pictorial excellence. In addition to this the work must display originality of outlook. Work which is merely good will not be likely to secure acceptance, nor will the picture which is commonplace in treatment find a place upon the walls.

While the selecting committees are concerned mainly with pictorial qualities, the photographer will find it very necessary to pay attention to technique. Perfect technique is necessary in order to make the best presentation of a good subject, while poor technique will place the print under such an obvious disadvantage that its rejection is certain. It must also be pointed out that, with the high standard of excellence reached by modern materials, there is no excuse for poor work. The selectors have far too much really good work to choose from to hang the productions of a poor technician, no matter how well seen the subjects may have been.

Size and Printing Process.

In these days, when almost every photographer uses a small camera, printing will be by enlargement. There seems to be a tendency on the part of some photographers to make their prints too large, to the detriment of the subject. Actually, there is little merit in making the largest possible print from the smallest possible negative. It may well be that a print of good quality may be made up to 15×12 in., but there is a marked falling-off in quality when larger prints are made.

The size of the print should be in relation to the subject. A landscape or seascape subject, presenting a wide expanse, may need to be on the large scale, while a portrait or flower subject, or a "new angle" presentation of some commonplace subject, itself on a small scale, is better in a smaller size.

Very large prints should be made when the subject demands them, and when the photographer's technique can produce them perfectly. Exhibition prints should be deeper in tone, and stronger with regard to contrast, than those made for home decoration, in order for them to stand the stronger lighting of the gallery, and to compete with the other prints which surround them on the walls.

The photographer will be well advised to make his prints by the process with which he is most familiar, rather than to attempt a new one. In order to produce the most perfect results by any process, experience is necessary.

Mounting.

Many otherwise excellent prints are spoiled by careless mounting. Bad mounting becomes very much in evidence, and can entirely ruin the artistic excellence possessed by a print. It is a pity to jeopardise the chances of success through this cause, and especially as in most cases the rules permit of mounting being done by someone else. Care should be taken to follow the suggestions as to the colour of the mounts, generally cream or light tone, and also to ensure that the mounts are of the dimensions stated.

In General.

Lastly, the rules governing the exhibition should be carefully read and observed. A breach of the rules may mean disqualification, and it is a wise procedure to check up the entry with the rules before despatch. Special attention should be given to those sections of the rules dealing with the name and address of the exhibitor and the title of the print that must appear upon the back of the mount.

The entry should be carefully packed, and care taken to see that the packing is of a kind that will not only protect the entry on its outward journey, but will also serve to protect it during the return home. Many of the complaints made of damage to pictures, and their return in a damaged condition, may be attributed to lack of care in the original packing.

There is no better method of packing than placing the prints between thin three-ply boards, the exhibitor's name and address being attached to each board.

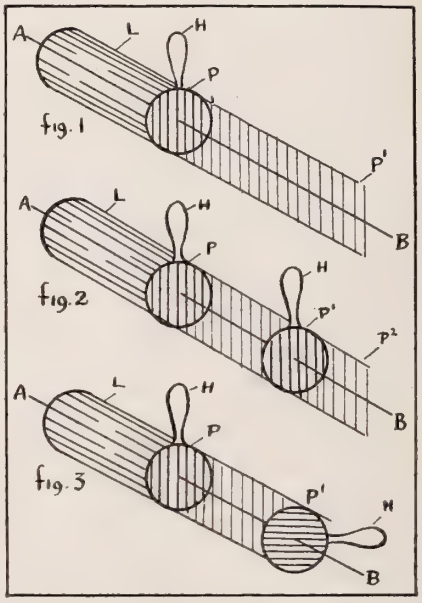
The parcel should be sent off at least two days before the closing date, in order to avoid any risk of late delivery through postal delay.

* The sending-in day for the Royal Photographic Society's Exhibition, 35, Russell Square, London, W.C., is August 14th. For the London Salon of Photography; 5a, Pall Mall East, London, S.W.1, the latest date is September 2nd.

Photographing *with* *Polarized Light*

A Note on the new Pola Screen.

By BERNARD ALFIERI, Jun.



IN order to understand the use of a pola-screen it is necessary to have a clear knowledge as to what polarized light really is. Ordinary light, either from a lamp or the sun, is composed of vibrations in all directions at right angles to the ray itself, whilst in the case of polarized light all vibrations have been eliminated but one.

To visualise this state of light, the accompanying diagram will serve as a graphic illustration, but, of course, must not be accepted as an authentic picture of light waves. In Fig. 1 the line A–B represents the axis of the light ray, which as ordinary light is shown as a tubular shape on the left-hand side, L. When this meets the pola-screen, P, all movements have been cut out except in an up and down direction, which is shown as a flat vertical ribbon, P–P1.

The handle of the pola-screen H has been arranged in a line with the vibration plane of the screen, so that if a second screen is placed in the beam of polarized light as shown in Fig. 2, with the handle in the same direction as the first pola-screen, the polarized light will pass through both, but if the second pola-screen is turned through a right angle, until the handle is in a horizontal position, as in Fig. 3, it will cut out the polarized light.

In order for the light to pass it in this setting, it would be necessary to turn the first pola-screen P into a horizontal position, when the movement of the polarized beam would then be in line with the vibration plane of the second pola-screen.

In this way, two pola-screens, used one in front of the other, could be employed as a variable density filter, and it is obvious that if such a screen is to be used effectively in front of a camera lens, it must be mounted so that it can be easily turned through a right angle.

Messrs. Kodak Ltd. have kindly lent me an experimental pola-screen in order to provide illustrations, and write from actual practice, and it will shortly be possible to obtain such screens. These will be mounted in a strong framework having a handle in a line with the vibration plane. A separate holder will be supplied to clamp on to a lens mount, which has been constructed to allow the screen to be turned through a right angle, and as it has a slight light-scattering power, it must be used with an efficient lens hood.

In Fig. 4 a notable property of polarized light is illustrated. Light reflected from a polished non-metallic surface at an angle of approximately 30° becomes polarized by the action of reflection, and to demonstrate this a glass dish has been placed before a window so that daylight reflected on its surface reaches the lens at an angle of about 30°.

A pola-screen has been placed before the camera lens, with the handle in a horizontal position, and, as we can see from this photograph, the reflection prevents us from tracing the pattern, due to excessive reflection. In Fig. 5 the handle of the pola-screen has been turned until it is in a vertical position, that is, the vibration plane of the screen is at right angles to the direction of the vibration of light from the reflecting surface of the glass. These are now cut out by the screen, and only the non-polarized portion of the light passes to the lens and film. The pattern on the underside of the glass is left clearly visible.

In Fig. 4 a piece of glass stands at the side of the dish, to reflect an image of the dish in a vertical plane, that is, a reflection, the vibration plane of which is at right angles to the direct reflection from the flat dish itself.

In the first (horizontal) position of the screen no reflection can be seen in the glass mirror, due to the fact that the vibration plane of the screen is at right angles to this reflection. But when the pola-screen is turned through a right angle, so that the

THE UNVARNISHED TRUTH

A fine week-end left us bankrupt of ideas. For the life of us we could not think out a coating for our usual advertising pill. This being the case, we are forced, with many apologies for our lack of modesty, to fall back on the following plain statement of fact.

We still remain the only firm specialising exclusively in miniature apparatus. Selling cameras with us does not amount to a purely mechanical function like doling out butter or cough syrup over a counter. We use and take a professional pride in our knowledge of the instruments we sell, and are able to offer our customers a unique service of advice in the selection of apparatus for their particular purpose. Notable introductions in miniature apparatus—as conscientious readers of *The Amateur Photographer* will probably by now have realised—are first obtainable from us. The "Miniature Only" Developing and Printing Service recently introduced has been acclaimed with enthusiasm by serious miniature camera users who are without time or convenience to do their own work. In fact, we do not think it can be called an overstatement when we say that the photographic public in general has realised that where miniature precision is concerned, specialist service is the best.

We have just received our first delivery of the new Contax Model III and of the Super Nettel Model III.

The Contax Model III resembles closely in its general specification the Chromium Model II, but has the addition of a built-in photo-electric exposure meter. It is thus the first miniature camera of the range-finder type to be equipped in this way. We might add that the increase in bulk is negligible. Price, with f/2.8 Tessar lens, **£55 17 0**; with f/2 Sonnar, **£63**; with f/1.5 Sonnar, **£78 5 0**.

The Super Nettel III differs radically from the Super Nettel II. In appearance it resembles the Contax Model II, but is definitely more pocketable. The speeds on this camera remain from 1/5th to 1/1,000th sec., but the lens has been made interchangeable.

Telephoto lenses of two different focal lengths will be available for this model.

Prices: With f/3.5 Tessar, **£28 5 0**; with f/2.8 Tessar, **£32 0 0**.

Buy your Contax III or Super Nettel III from the Miniature Camera Specialist. We shall be pleased to take any existing apparatus in part exchange.

THE FOLLOWING LIST REPRESENTS A SELECTION OF USED MINIATURE CAMERAS FROM OUR STOCK. WE HAVE, BESIDES THESE, THE MOST COMPREHENSIVE COLLECTION OF NEW MINIATURE CAMERAS AND ACCESSORIES TO BE FOUND IN GREAT BRITAIN. OVER FIVE HUNDRED DIFFERENT ACCESSORIES FOR THE LEICA CAMERA ONLY ARE TO BE SEEN AT OUR SHOWROOMS

WITH EACH OF THE SECOND-HAND CAMERAS LISTED BELOW WE GIVE A WRITTEN GUARANTEE OF MECHANICAL AND OPTICAL PERFECTION.

LEICAS:

Leica Model IIIa, fitted latest pattern rectilinear focussing f/1.9 Hektor. Unsoiled in any way £45 0 0
Leica Model IIIa, f/2 Summar lens, ever-ready case. As new £34 10 0
Leica Model II, black, f/2.5 Hektor lens. As new £21 10 0
Leica Model II, black, f/3.5 Elmar. Excellent condition £18 10 0
Leica Model I, f/3.5 Elmar lens, interchangeable. Excellent condition £10 10 0
Leica Model I, f/3.5 Elmar lens, non-interchangeable. Good condition £8 5 0
Leitz 3.5-cm. f/3.5 Elmar, coupled, chromium £6 15 0
Leitz 2.8-cm. f/6.3 Hektor, chromium. As new £8 17 6
Leitz 7.3-cm. f/1.9 Hektor, coupled, non-rectilinear focussing. As new £18 10 0
Leitz 7.3-cm. f/1.9 Hektor, coupled, rectilinear focussing. As new £21 10 0
Leitz 13.5-cm. f/4.5 Elmar lens, uncoupled. Good condition £7 5 0
Leitz Synchroflash Attachment, £3 5 0. Angular Bracket, 13s. 6d. Bench Film Winder, 9s. 6d. Self-timer, 12s. 6d. Soomp Lens Hoods, 7s. 6d. Panorama Head for 5-cm. lens, 7s. 6d. Fipos Filter, 13s. 6d. Firad Filter, 14s. 6d. Figro (No. 1) Filter, 12s. 0d. Angular Finder for Model I, 22s. 6d. Small Universal Finder, latest pattern, 45s. 0d.
Copying Arm, with rotating plate to fit enlarger column £6 17 6
Leitz Valoy Enlarger, 20-in. column £7 15 0
Ditto, with 40-in. column £8 4 6
Leitz Filoy Enlarger £5 15 0

CONTAXES:

Contax Model I, wedge-type range-finder, f/1.5 Sonnar lens, ever-ready case. As new £42 10 0
Contax, as above, but with f/2 Sonnar lens £32 17 6
Contax Chromium Model II, f/2 lens, ever-ready case. As new £39 10 0

The following Telephoto Lenses will fit either the Models I or II Contax:—
Zeiss 8.5-cm. f/2 Sonnar lens As new £26 10 0
Zeiss 18.5-cm. f/6.3 Tele-Tessar. As new £20 10 0

CONTAXES—contd.:

Zeiss 12-in. f/8 Tele-Tessar, with filter and special case. Cost £48. As new £30 0 0
Contax Plate Back, £3 5 0. Extra Slides, 5s. 6d. each. 42-mm. Filters: Dark Red, 12s. 6d.; Green, 12s. 6d.; Light Yellow, 9s. 42-mm. Proxars: No. 1, 12s. 6d., No. 2, 12s. 6d. Contax Magniphot Enlarger, to take lens from camera. Excellent condition. £6 17 6.

ROLLEIFLEXES:

Latest 1936 6×6 cm. Automatic Rolleiflex, f/3.5 Tessar, Rapid Compur, ever-ready case. As new £19 15 0
Automatic Rolleiflex 6×6, f/3.8 Tessar, Compur, ever-ready case £16 15 0
Automatic Rolleiflex, f/2.8 Tessar, latest type, normal Compur, ever-ready case. As new £17 10 0
Rolleicord, f/3.8 Triotar lens, ever-ready case. As new £11 17 6
Rolleicord, f/4.5 Triotar lens, case. As new £8 15 0
Rolleiflex Iris Stop, 18s. 0d. Rolleipars, 16s. each. Latest type Lens Hood, 11s. 6d. Duto Lens, No. 1, 15s. 0d. 4×4 cm. Plate Back, 18s. 6d. Slides for Plate Back, 11s. 0d. each.

MISCELLANEOUS:

Contaflex, f/2 Sonnar, ever-ready case. As new £55 10 0
Contaflex, f/2.8 Tessar, ever-ready case. As new £49 10 0
Foth-Flex 6×6 cm., latest slow-speeds model, f/3.5 lens. As new £7 17 6
Reflex-Korelle, f/3.5 Radionar. As new £9 9 0
Reflex-Korelle, latest improved type, f/3.5 Tessar, ever-ready case. Practically unused £14 10 0
Exakta Model A, f/3.5 Ihagee anastigmat. Good condition £11 10 0
Exakta Model A, f/3.5 Tessar. Excellent condition £13 17 6
Exakta, latest lever-wind Model A, f/2.8 Tessar, case. As new £19 10 0
Enlarger, for use with Exakta lens. Shop-soiled only £3 10 0
Voigtlander Superb, f/3.5 Skopar. As new £11 17 6
Voigtlander Superb, f/3.5 Heliar, de luxe case. As new £14 10 0
7½-in. f/5.5 Tele-Xenar for Korelle-Reflex. Cost £11 15s. As new £8 15 0
Zeiss Super Ikonta 530/LCPR, f/3.5 Tessar, Rapid Compur, case. As new £14 15 0
Zeiss Super Ikonta 530, f/3.5 Tessar, case. As new £13 10 0
Zeiss Super Ikonta 530/16, f/3.5 Tessar, Rapid Compur. As new £19 17 6
Zeiss Super Ikonta 530/2, f/3.8 Tessar, Rapid Compur, case. Cost £24. As new £19 10 0
Zeiss Ikonta 520, f/3.5 Novar, Rapid Compur. As new £7 7 6
Foth-Derby, f/3.5 lens. Excellent condition £3 15 0
Foth-Derby, f/2.5 lens. Excellent condition £5 12 6
Voigtlander Virtus, f/3.5 Heliar, case. As new £8 17 6

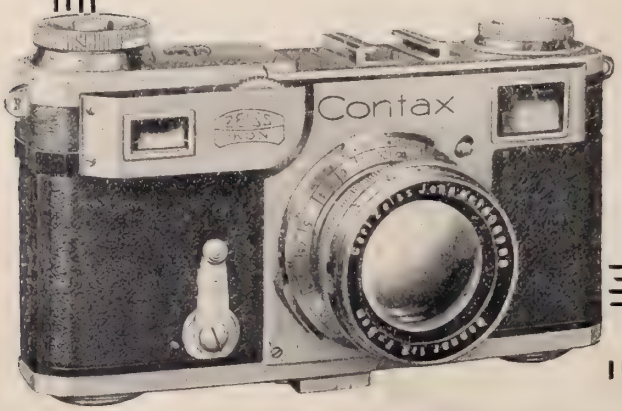
R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

"... The distance meter's fine, so easy to operate. Why is that?"

"The distance meter of Contax II works on the wedge principle, Sir. It's a patent, and only found on Zeiss Ikon cameras."

"But aren't these things rather delicate? Can you assure me that this distance meter is reliable?"

"Yes: the long base makes it very accurate, and with our wedge system there aren't any little parts, such as complicated levers and hinged mirrors, to go wrong."



"That's fine; but where's the view-finder? This camera doesn't seem to have one."

"But you have just been looking through it. In the Contax II the view-finder is combined in the same window as the distance meter."

"H'm ..... seems a perfect little job."

ZEISS IKON

And the Contax II is truly the perfect miniature camera, for in addition to the combined distance meter and view-finder, we give a choice of 12 interchangeable Zeiss lenses, an incorrodible metal focal-plane shutter working to a real 1/1,250th second, built-in delayed-action release, detachable back, and other important exclusive features.

CONTAX II

We invite those desirous of further information to ask their local stockist for a demonstration. Name of stockist, together with full particulars, free on request. 96-page general catalogue for 3d. in stamps.

ZEISS IKON LTD.

11, Mortimer House, Mortimer Street, London, W.1

reflection on the glass dish has been killed, it has at the same time passed the vertical reflection, and we can now see the dish reflected in the glass.

A practical application of reflecting surfaces is shown in Figs. 6 and 7, where white blossom has been photographed against water, at an angle of roughly 30° to the surface of the stream. Fig. 6 is a straight photograph taken without a screen, and the white of the blossom has been lost against the bright reflection on the surface of the water. In Fig. 7 a pola-screen was used in front of the camera lens, with its handle in a vertical position. In this position it absorbs the polarized reflection, and deepens the tone of the water, allowing the white blossom to stand out.

A pola-screen is of great assistance in interior or architectural work, where the relative brightness of walls or ceilings can be slightly controlled and objectionable reflections reduced almost to nothing.

No exposure factors can be given when using a single screen in daylight, as it will depend on the percentage of polarized light that is present, and this can only be determined by experiment, but as a rough guide, Fig. 7 was given double the exposure of Fig. 6, using panchromatic film.

Fig. 6.

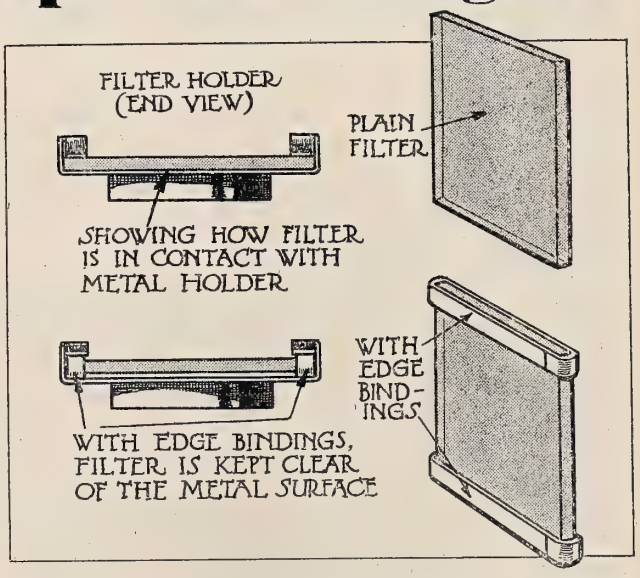


Fig. 7.

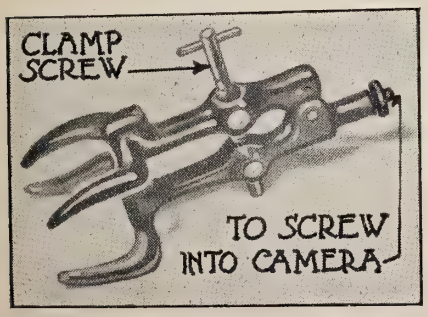
Readers' Hints, Tips and Gadgets

PROTECTING COLOUR FILTERS.



THIS is a hint that will interest all users of colour filters of the square glass type that slide into a standard metal holder. If the glass has no protecting raised edge, the most important surface of the filter, the centre, is bound to be scraped on the metal holder as it is pushed into position. To overcome this, it occurred to me that it needed only a narrow binding on two opposite edges of the filter to lift the glass surface clear of the metal. A long thin strip of roll film backing-paper was cut about ⅛ in. wide and was wrapped round each of the two opposite edges, as shown. As each layer was made a thin smear of glue was added, and when about four or five layers are made the filter is set aside to dry. The reason why one strip of paper is used, instead of separate pieces, is that it protects the two ends of each binding, and if both bindings have an equal number of layers, the filter will be perfectly parallel with the filter holder. These bindings are also some protection to the filters when they are removed and returned and kept in the filter boxes, and provide a convenient means of handling.

R. EDGEWARE.

A UNIVERSAL CAMERA-HOLDER.

SINCE a tripod is usually a trifle too bulky an object to take when one is off for a short trip into the country with a light camera, I have devised the following universal camera holder.

There is a negligible amount of work attached to its making. It consists, chiefly, of a "claw" clamp; this has the majority of the arm cut off, the remainder is tapped, threaded to suit a certain bolt (which will fit the tripod socket of the camera) and the bolt screwed in tightly. The hexagonal head of the bolt is then cut off, a lock-nut screwed on, and the job is finished.

Clamps are procurable at considerably lower prices than the two aforementioned articles, and if the larger type of "claw," with swivelling jaws, is used, the camera can be used in any desired position.

The jaws themselves, having a 4-in. span, are remarkably versatile. Cork-lined, they can be clamped on to polished wood, not marking it; being swivelled in a separate jaw, they can be clamped on to uneven surfaces, such as a wedge, or stone, anything up to the limit of the span. I have had mine fastened on a drain-pipe and tested it with my weight; it did not even hurt the cork.

If a normal clamp is used, a ball-and-socket head enhances its scope a lot.

J. N. GREENWELL.

Taking

By J. F. MANN.

When you are at a loss for an idea for making pictures, and "inspirations" just won't come your way, try this—it's a real tonic. It is equally suitable for all, whether your camera is an expensive de luxe arrangement or a humble "box."

MONDAY.

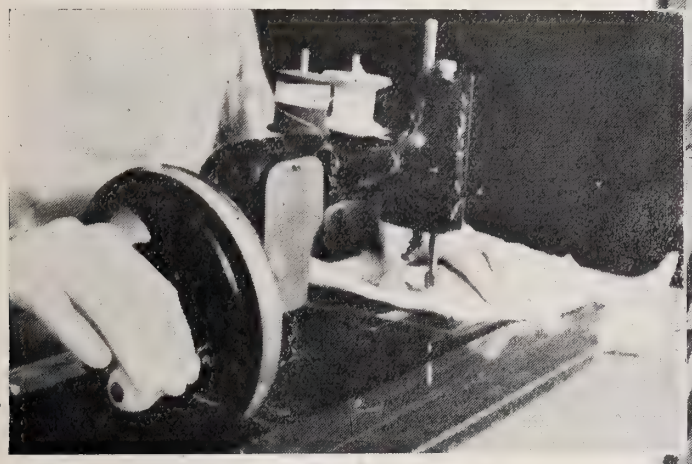
VERY many amateur photographers must have at some time or other asked the old, old question, "What shall I take next?" They mean, of course, that they want to take photographs for the sheer enjoyment which is to be derived from our hobby, but have run out of ideas.

This thinking-up of ideas is greatly facilitated by the making of series of pictures. There is no need to wait for "inspirations" to come your way. Just take a pencil and jot down the first simple things that come to your mind, like this: "Days of the Week" (with which this article is illustrated), series of seven pictures; "Months of the Year," series of twelve; "The Seasons," series of four; "The Alphabet," series of twenty-six; "Holidays" (Christmas, Easter, August Bank Holiday, etc.). With just a little thought, you will be amazed at the length of your list and the speed with which it grows. For those who have a liking for portraiture, a series, entitled "Moods," would open up scope for numerous pictures.

Having made out your list (the length of which would seem to be limited only by the length of time you spend writing it out), take one subject and sub-divide it into the various sections of which it is capable. If you write these out, it will help you to put the thing into concrete form—it is far better than just thinking them out. Having sub-divided your subject, you will find, on looking at your list of sections, that at least one section (probably more) simply shouts for a picture. The idea for your first one or two pictures has arrived already. Make a note at once. This is probably the easiest one of the series, but it has started the ball rolling, and other pictures to go with it will soon come up before your mind's eye.

SUNDAY.

TUESDAY.



You can, of course, write out the whole series of pictures before commencing operations, or you can make exposures for the first few you have thought of, and deal with the others later. You could even run two or three series at the same time. In any case, you will find that ideas begin to flow in thick and fast, and it will be a long, long time before you are "stumped" for ideas for really good pictures.

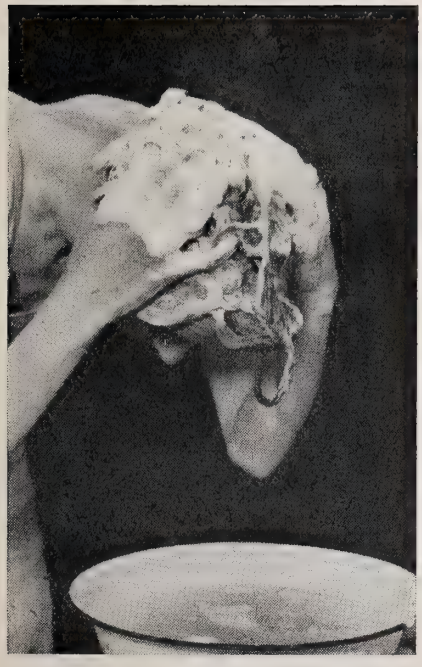
One word of warning may not be amiss

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Photographs in SERIES

here. Just because you have got a whole lot of ideas in advance, don't rush the pictures. A series may easily take weeks to complete, and be all the better for it. Treat each picture as you would your individual photographs, remembering that although it is only a part of the series

WEDNESDAY.



and if bad, it is quite capable of making or marring it.

One of the beauties of this series-making is the remarkable number of times that alternatives occur. For instance, take the series illustrated: Monday could be alternated with a picture of the actual washing operations; Sunday could be alternated with a picture of pastry-making or church-going, or even the existing picture could be altered, added to, or subtracted from in various ways. Or, again, the whole outlook of the series shouts for alternatives. The present series shows the days of the week as they affect the average housewife's work. This could be alternated by a series of a man's work; or, to show the days of the week as they affect the community at large,

Concerning apparatus. Here again the alternatives help us greatly. You may think up an idea which proves too much for your camera, but it is almost certain that there is an alternative which is well within the scope of the humble "Brownie," or similar camera. Look once again at the illustrations. They could all have been taken with a "Brownie," with possibly the addition of a portrait attachment. The interiors would present no technical difficulties, as a shillingsworth of flashpowder (using hyper-pan. film) would enable an f/11 camera to take two or three series of this sort.

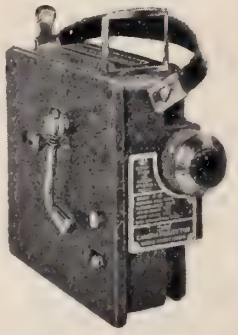
SATURDAY.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS



The Western Salon of Photography, organised by the Western Counties Photographic Federation, was opened at the Royal Albert Memorial Museum, Exeter, on Saturday last, July 11th, and remains open until July 18th. There was a very large entry of British, Continental and American work, all of a high standard, and the Western Federation Class also attracted a notable number of good prints. Both the Open and Federation classes for lantern slides were well supported. The Hon. Salon Secretaries are to be congratulated on the success attending their work.

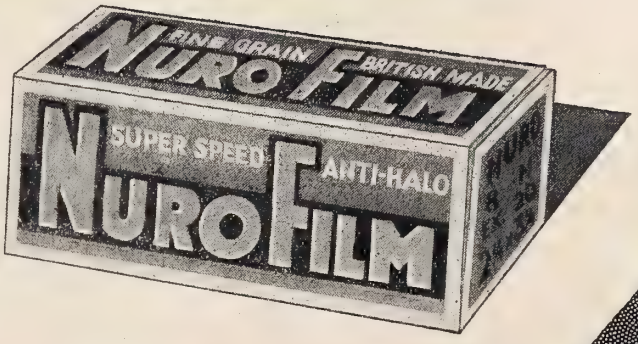
At the Batsford Gallery, 15, North Audley Street, W.1, an exhibition of photographs, "Ballet in Action," was opened on Thursday last, July 9th, by Mme. Fokine. The photographs are by Merlyn Severn, and were all taken with the Contax camera. The exhibition remains open until July 31st, and admission is free.

"The Farmer's Home," the weekly photogravure supplement to our sister publication, *The Farmer and Stock-Breeder*, announces a novel and interesting competition with valuable cash prizes amounting to £250, of special interest to country photographers. The competition is to discover the most charming country girl to represent "Milkmaid Charm." Each county in England and Wales will provide a winner who will be judged from the photographic portraits sent in to "The Farmer's Home," and from these Regional Dairy Queens an absolute winner will be selected. Full particulars of the competition are printed in the current issue of *The Farmer and Stock-Breeder*.

An attractive book of pictorial photographs has just been published, entitled "A Leica Amateur's Picture Book." It deals with the work of Rudolf Pestalozzi, and is a collection of some of the pictures made with a Leica camera by this worker during the past four years. They are all fine examples of straight photography, taken in various parts of the world, and are an eloquent testimonial for the camera in question. The book, which is of large size, with 160 pages of pictures in photogravure, is published at 21s., and is obtainable from the Fountain Press, 19, Cursitor Street, London, E.C.4.

A new model of the Campro Ciné Camera-Projector has been introduced and is well worth the attention of readers in search of a low-priced 9.5-mm. ciné outfit. The Campro is a remarkable little instrument that not only takes the picture but projects it afterwards, and is entirely self-contained. It is very strongly made, the body being a stout metal casting. It has a particularly smooth-running Garrard motor, and will take the standard 30-ft. of film with one winding. The lens takes at f/3.5, with fixed focus from 4 ft. to infinity. For projecting it is opened out to f/1.9, and when connected up with a small portable battery gives a brilliant two-foot picture. A double-claw movement produces an extremely steady result. The Campro is easy to load, the interior adjustments being both simple and effective in action. A footage indicator is fitted and a direct-vision view-finder. The release is conveniently placed, and an ingenious rewinder is supplied with the camera. Altogether it is an attractive proposition as it costs only £3 17s. 6d., or £6 6s. if fitted with f/2.5 anastigmat. It is made and sold by Home Ciné Cameras, Ltd., 18, Gray's Inn Road, W.C.1, who will supply all further particulars on application.

An exhibition of photographs of topical interest of "The British Fleet in the Near East" was opened on Thursday last, July 9th, at the Ilford Galleries, 101, High Holborn, W.C.1, by Rear-Admiral Geoffrey Layton. Nearly all the photographs were taken by Mr. Charles Brown while he was with the Fleet at Alexandria. Those showing the Fleet Air Arm are of particular interest. Admission is free.



We regret to have to record the death of Dr. P. H. Emerson, who died at Falmouth on May 12th, at the age of 80, after a long illness. Dr. Emerson was well known to the older generation of photographers as a pioneer in pictorial photography, and his book on the subject, "Naturalistic Photography," published in 1899, has become a classic. In addition to this book he wrote a great number of others on East Anglia, illustrating them with remarkably fine pictures of the Norfolk Broads. He was, in fact, one of the first photographers to discover the pictorial possibilities of the Broads nearly fifty years ago. In recent years he was devoting his time to the production of a work on the history of photography, and awarded medals to all those he considered worthy of inclusion in its pages. The Royal Photographic Society awarded him the Progress Medal for his work in "the advancement of artistic photography."

Velvet-lined Leather Case, 6/9 extra.

"WESTEX JUNIOR"

Takes 8 pictures 3¼ × 2¼ on standard film. Fine f/6.3 anastigmat in focussing mount. Self-erecting front, ready at a touch, direct-vision and brilliant finders. Quite unparalleled at its price..... **42/6**
Nine monthly payments of 5/3.

Here are some "WESTEX" Advantages:

1. Highest class design and finish throughout.
2. Finest hard leather covering, nickel-plated edges.
3. F/4.5 anastigmat lens of exceptional quality, giving splendid results.
4. Most modern type focussing adjustment.
5. Shutter has 8 speeds, 1 to 1/150th sec., delayed-action device.
6. Both finders have masks for alternative picture sizes.
7. Quick, high-precision movements.
8. Latest type high-efficiency film transport.
9. Simple enough for novices, yet fully adequate for the most exacting expert.
10. Best value obtainable, sold with the full Westminster guarantee.

NEW VOIGTLANDER BESSA—Built-in Range-finder

Takes 8 pictures 3¼ × 2¼ or 16 2¼ × 1¼ on standard 3¼ × 2¼ film.

New design baseboard, ensuring enhanced rigidity. Unique trigger release under baseboard. Yellow filter permanently attached in folding mount. Quick self-erecting front, depth-of-focus scale.

F/3.5 Holomolos anastigmat, in delayed-action Compur shutter, 1 to 1/400th sec., T. and B. **£16:10:0**
Nine monthly payments of 38/6.

F/3.5 Skopar anas., shutter as above.. **£18:15:0**
Nine monthly payments of 43/9.

F/3.5 Heliar anas. shutter as above.. **£21:0:0**
Nine monthly payments of 49/-.

NEW ZEISS IKON SUPER IKONTA II

Eight 3¼ × 2¼ or 16 2¼ × 1¼ on standard film.

All metal parts chromium finish; film winder and shutter interlocked, entirely preventing double exposures. Albada direct-vision finder, Tessar f/3.8, Compur Rapid delayed-action shutter, 1 to 1/400th sec.

£27 : 0 : 0

Nine monthly payments of 63/-.

ENSIGN AUTORANGE New Model

The British-made camera with coupled range-finder and exclusive features, including radial focussing, rising and cross front, etc.

F/4.5 Ensar, 3-speed, T. and B. shutter.... **£6:10:0**
Nine monthly payments of 15/2.

Ditto, Prontor II shutter, 1 to 1/150th sec., T. & B. **£8:10:0**
Nine monthly payments of 17/8.

F/4.5 Zeiss Tessar, Compur Rapid to 1/400th sec..... **£13:17:6**
Nine monthly payments of 32/5.

THE NEW 'WELTUR'

Built-in Range-finder and View-finder combined.

Takes 16 2¼ × 1¼ on standard 3¼ × 2¼ spool. High precision camera with self-erecting front, and every up-to-date refinement at moderate price.

F/2.9 Radionar, normal Compur shutter. **£17:17:6**
Nine monthly payments of 41/8.

F/2.8 Zeiss Tessar, ditto **£22:19:6**
Nine monthly payments of 53/7.

Compur Rapid shutter 28/6 extra

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCXLII.

From information communicated to our Special Representative.

Miss D. E. LAYARD.

"THE great majority of my exhibition work comes under the heading of Natural History; I will therefore confine myself to dealing with that class of subject. Three golden rules which I have made for myself are: Be patient—be thorough—be prepared for hard work.

"As far as apparatus goes, I have now what I consider the very best possible with the means at my disposal. I use a ¼-plate Soho reflex with a Dallon 12-in. telephoto lens. The only drawback to this combination is the weight—about 7 lb.; but it is quite worth the slight inconvenience to have such an outfit.

"My ammunition is film-pack, for reasons of speed and lightness. I use either Selochrome or Agfa Isochrom, both of which give excellent results. I also use a Dallmeyer ×2 filter, when the quality of the light permits and the subject demands it.

"Most of my subjects, except the ordinary domestic animals, are taken at the London Zoo, a very fruitful field of action. I aim at getting technique as perfect as possible, as this is vital to the rendering of fur, feathers, etc. I develop in a tank, and use Azol, 1 in 60, and I generally give rather longer than the table suggests. I aim at getting negatives which will need not more than 60 seconds in my enlarger.

"I enlarge by reflected light, and prefer negatives of not too great a density. In selecting negatives for enlarging for exhibition purposes I choose those which are as technically perfect as possible, and which will produce prints needing the least amount of after-treatment. The 'straighter' the print the more it pleases me, though I am not a conscientious objector to a little artificial help. When enlarging I do not make trial strips; I prefer to use a whole sheet. My method is to keep records of exposures of my prints. When making the first enlargement from a new negative I find another negative of similar type, look up my record for the time of exposure necessary, and use that as a guide. It rarely fails.

"As regards paper for enlarging I find that one or other of the Kodak Royal papers gives me the best results. This paper is now made in so many varieties that a suitable brand can generally be found for any subject. I use an M.Q. developer, and always an acid fixing bath. I try never to attempt any enlarging if I am tired or rushed. I cannot get the best results unless I give my whole attention to it. This applies to any photographic process, but more particularly, I think, to enlarging. It is not merely a chemical process, but it demands personality and concentration in a high degree.

"I almost always intensify my exhibition prints with chromium, whether it appears to be necessary or not. It brightens up the prints, and improves the colour, especially when a paper is used that has a cream base. As a final process I use the oil-reinforcement method. First an application of turpentine, then megilp, well rubbed in so as to prevent smearing. Any paint needed for darkening can then easily be applied. Even if no working-up is necessary the oiling will give an added richness to the print.

"Both the examples here are straight prints, oiled as described, with portions of background darkened. The oiling should be done at least three days before mounting, so that the print should be free from all stickiness.

"In theory, I always have my exhibition prints ready in very good time; in practice, I very often rush them through at the last minute, despite all my good resolutions."

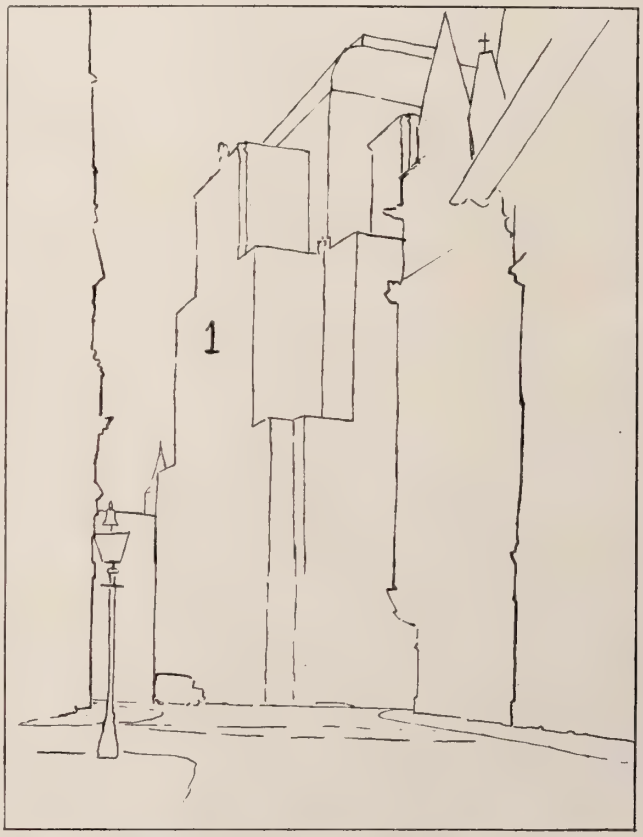
(*A further example of Miss Layard's work is reproduced on one of the centre Art pages.*)

HIS MAJESTY. *Miss D. E. Layard.*

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE NEW MANCHESTER," *by B. R. Fishwick.*



THE beauty of an effect of sunshine is very well conveyed in this example of work in urban surroundings, and the effect gains in value from the form of the building on which its influence is manifested.

From the position of the shadows and the strong illumination of the vertical planes, it may be inferred that the lighting was that of either early morning or evening with the sun shining from a comparatively low altitude. Such a lighting is about the best of the day for pictorial work, for not only has it a soft and mellow quality in itself, but it also has the power of emphasising the vertical planes, and stresses the attraction of those particular portions of the subject content which it is usually found desirable to accentuate.

The point is exemplified in this instance. The main attraction of the picture rests in the sunlit façade of the building in the middle distance (1), and, because the position of the sun was low, its walls are much more brightly lit than—for example—the horizontal streak of sunshine stretching across the foreground. It also attains such a degree of brightness that it seems to glow against the darker tone of the sky behind, a feature that, besides endowing the building with a beauty that it would not ordinarily possess, could scarcely be obtained with a noontide lighting when the sun would be considerably higher in the heavens.

But this brightness is also of service in the arrangement of the composition. As the most brilliant light, it attracts and holds the attention, so much so that the building becomes the self-evident centre of interest. The value of the light is further stressed by the sombre tone prevailing elsewhere, and the placing of the front in question—it falls across two of the points of intersection formed by vertical and horizontal divisions of thirds—also lends it the emphasis of strength of position. This strength is further supported by the leading lines of the roadway and eaves in perspective, which happen to fall most happily—probably in consequence of a considerable degree of care in the choice of the viewpoint—and, altogether, the arrangement makes up remarkably well.

The fact that the chief centre of interest at (1) coincides with the maximum expression of the effect lends the latter the greatest possible significance, and, moreover, is of value in conferring a satisfying measure of unity upon the work as a whole. It is very pleasing indeed, and, in connection with the form of the building, it will be observed that there is the main front, which takes the major interest and greatest mass of the illumination, and a series of smaller frontages, which both break up the surface and provide a succession of accents emphasising the force of the first.

Incidentally, it could be wished, perhaps, that there were a little greater weight in the intervening shadow tones, and, possibly, a somewhat greater depth of tone in the upper reaches of the sky. Whether it would be possible for such an adjustment to be made or not could, in the absence of full technical data, scarcely be definitely stated, but it may be that the substitution of a slightly more vigorous type of printing paper in place of that formerly employed would be found effective. It should, at all events, enable a more definite decisiveness to be incorporated—a quality in which the present rendering of the building is somewhat deficient—and the consequent gain in presentation would considerably enhance the impression the work conveys.

Another thing that is noticeable is the absence of figures. This, in a town subject, seems rather anomalous, and leads to the suggestion that the scene was taken either on a Sunday or a holiday, when the customary evidence of business and activity would not be present.

As a corollary, there is a feeling of peace and quietude which is not altogether in accord with the nature of the surroundings, and, when subjects of this sort are dealt with, it will usually be found desirable—and much more congruous—to arrange for the inclusion of something—either figures or traffic of some description—to convey an idea of the activities ordinarily associated with the neighbourhood.

This suggestion, of course, would add considerably to the difficulties of obtaining a picture, but difficulties only exist to be overcome.

Nevertheless, the work, in its present form, shows a great deal of promise and an eye for an effect, and, in arrangement, it is very well designed.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

APART from the intrusion of the overhanging bits of twigs on the left-hand side, No. 1 of the prints reproduced on the opposite page—"Old Preston Church," by W. Nelson—seems to display a well-chosen subject, and it really has a not inconsiderable beauty of effect, but it does suffer from a serious drawback in that there is a great deal too much contrast in its presentation.

Print and Presentation.

It appears quite clear from the side of the tower in shadow that there ought to be a definite indication of the texture of the stonework on the sunlit side, but, for all practical purposes, the latter side is shown devoid of any tone at all, and it certainly does not convey the impression that the eye would perceive.

It is not a question of depth of printing, for, in view of the intensity of the darks, any move in this direction would only result in a general choking up. What is wrong is that the printing paper is too vigorous for the negative, or, putting it the other way round, the contrasts of the negative are too great for the range or scale of the printing paper. If there should be any special reason for the employment of the particular grade of printing paper adopted, the negative should not have been developed for so long a time. Its scale of tones and the contrast between them depend on the time for which development is allowed to proceed, and, as far as can be judged, somewhere about half the time would have been fully adequate.

In that event, a print on the same paper would reveal the lights and darks in a more harmonious relationship, and the present excess of contrast would be avoided. Not only would the light on the tower be fully detailed, but there would be a better gradation in the sky, and, at the same time, there would be no over-printing of the darks.

Scale and Contrast.

But the negative has now been made, and the adoption of this treatment is impossible. It is true that certain processes of reduction might be employed to minimise its contrast; but, at best, they are not too reliable, and the device of making a transparency and a new negative from it, while effective enough, is somewhat lengthy and laborious. The only practical expedient remaining is to change the grade of the printing paper, substituting a much "softer" grade for that employed.

Most classes of development papers made to-day are supplied in three grades—vigorous, normal and soft. If it should be the case, in this instance, that a vigorous grade were used, the probability is that a soft would possess the necessary characteristics for coping with the contrasts of this negative; but if a normal or soft paper were employed, it will, most likely, be found necessary to have recourse to a different and softer type altogether.

Speaking generally, gaslight papers are the most vigorous; bromide papers, P.O.P. and self-toning papers are appreciably softer; and chloro-bromide papers, carbon and platinum are softer still. There may be, however, a certain amount of overlapping—a vigorous type of chloro-bromide, for example, might be of greater contrast than a soft bromide—but the range is pretty wide and more than sufficient to correct the excess of contrast in the example under discussion.

Harmony and Vigour.

The right paper would, of course, have to be found by experiment, but the effect of the substitution would be practically equivalent to a reduction in the time of development of the negative, the print, while retaining a needful measure of vigour, becoming more harmonious and free from the existing excess of contrast.

No. 2, "The Path by the River," by J. A. Holdcroft, shows a similar defect, but not to the same degree, the stream being too light in tone and the hillside and foliage being too dark.

It is not, perhaps, so noticeable as in the former case, for there is no sky, and the nature of the subject is such that quite wide differences in representation would be equally acceptable. The print, however, goes beyond this permissible latitude, and the light tone of the water is too bright in comparison with the depth of tone elsewhere, yet the surroundings could not truly be recorded in any deeper one.

A substitution of printing papers is again indicated, but in this case the probability is that the next softer grade would do—i.e., from normal to soft or from vigorous to normal.

Technical Treatment.

After the question of exposure, the matching of negative to printing paper or the reverse is the most important element in technical treatment, and, in Nos. 3 and 4, "The Old Cottage," by James Wood, and "Among Tyrolean Heights," by E. J. Wanstall, a very near approach to a proper scale of gradation has been achieved.

In neither case is there any lack of detail either in the lights or darks. In "The Old Cottage," the brightest notes—those of the cottage wall—show distinct differences of tone, and, at the same time, there is modulation in the shadows of the foreground, which represent the opposite extreme. There is tone in the sky of No. 4, and the darks of the trees in the middle distance are by no means excessive. In both, the full range of the paper has not been employed, and, while vigour is not lacking, it does not extend so far as to create an impression of harshness or excess of contrast.

It is possible that a still softer rendering might be preferred by some, but it would be a matter of opinion, and, in any case, the prints do indicate a step in the right direction.

A Question of Taste.

Tastes differ and there is a reasonable amount of latitude, but the theoretical condition that there shall be a margin at both ends of the scale is satisfied and any further limitation can be left to personal inclination.

In the case of No. 5, "The Wishing-Well," by R. E. Smith, the subject material seems rather confused, but the print is not technically unsound, and, with the existing lighting, it would be difficult to obtain a better rendering. On the other hand, "Horsey Mill" (6), by E. S. Green, is an improvement as far as arrangement is concerned, but its contrasts, unfortunately, are again inclined towards excess. The remedy has already been indicated, and the degree is about the same as No. 2. "MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

SPEED NUMBERS.

SOME weeks ago I was talking about early snapshot work, and pointed out that good results were obtained with lenses and plates so slow that modern photographers might well suppose that such results were impossible. Whereupon an old friend of mine, Mr. J. A. Lomax, sent me a print which is reproduced on this page. The tone values of the original are excellent; and yet he tells me that the print was made in 1907, from a negative on a Marion plate with an H. & D. speed of 250, the exposure being 1/1,000th of a second at f/6.8.

You might specially note the speed number—H. & D. 250; because I am going to take the opportunity of saying something about present-day speed numbers. It is a matter that is causing an enormous amount of confusion, doubt and annoyance—and no wonder.

The old wet-plate was absurdly slow, partly because it was more or less insensitive to all the colour rays in light except those near the violet end of the spectrum. When the dry-plate came along, photographers were told, of any particular brand, how many times it was faster than a wet-plate. Hence, for example, the Paget XXXXX, which, in spite of its suggestion of super-strong beer, was supposed to be five times the speed of a wet-plate.

Later on, as speeds of emulsions became higher and more varied, the Hurter and Driffield method of sensitometry was introduced. After carefully standardised exposure and development the resulting densities in the negative were measured and plotted out, and the different "density curves" thus obtained gave a reliable comparison of the "speed" of the various emulsions so tested.

I may say here that on the Continent they have a different method of "reading" the density curve, so that they arrive at a speed from two to three times the H. & D. figures as we understand them. I venture the personal opinion that such numbers are fictitious, although I should not have any objection to them if they were given some other designation than H. & D.

A great deal of the present confusion about plate speeds is the result of the continuous improvement in the colour-sensitiveness of emulsions. What we understand by "daylight" contains all the rays that give the the spectrum—violet, indigo, blue, green, yellow, orange, red—and some more besides. It is clear that a plate that is "sensitive" to only three of those groups of rays will not be affected by daylight to the same extent as a plate that is sensitive to five or seven.

So that, quite apart from the inherent speed of the silver emulsion, much depends on the range of the colour rays to which that emulsion has been made sensitive. Given the same initial speed, orthochromatising an emulsion will make it faster, and panchromatising it will make it faster still. Exposure to daylight is assumed.

The testing of sensitivity, as it must be done systematically, involves a standard light; and a standard light must be an artificial light; and no

At a Horse Show.

artificial light has exactly the same constituent rays as daylight. You can no doubt see why a method that would give reasonably consistent results with wet-plates or "ordinary" dry-plates will break down when it comes to orthochromatic and panchromatic emulsions, and to the use of different standard illuminants.

Another method of arriving at comparative speeds is the Scheiner, the figures being given in degrees, as 20°, 21°, 22°, etc. The higher the number the greater the speed. A still later method is DIN, in which the speed is indicated by the numerator of a fraction with 10 as its denominator, as 8/10, 16/10, 20/10, etc.

Now, plates and films, if they are given a speed at all, may have it in British H. & D., Continental H. & D., Scheiner or DIN; and exposure meters may be calibrated according to one or more of these systems.

And, as I frequently have occasion to point out, these systems cannot be consistently converted from one to another.

If you do not believe me, listen to this from a scientific journal. "In order to determine whether there was any satisfactory relationship between the two methods of expressing sensitivity (Scheiner and DIN) the authors examined 18 types of film, deriving the required DIN and true Scheiner values. The results obtained show that it is possible to have two emulsions with identical Scheiner values, one of which is ten times as sensitive as the other according to the DIN values, the difference being partly due to the spectral differences of the illuminants used."

I could multiply that sort of thing indefinitely, till you would be reduced to a condition in which confusion was worse confounded.

Committees are at work trying to evolve some sort of order out of the undoubted chaos. Whatever the result I will venture on another personal opinion; namely, that no single "speed number," by whatever system determined, can possibly indicate the capability of a plate or film under all conditions of exposure.

You may have two plates which are indistinguishable as regards speed when exposed in the middle of the day, and one of them may be twice as fast as the other by the yellow evening light, and ten times as fast by half-watt light.

What speed will you allot to each? With certain exposure meters, calculators and tables, there is no need to worry about different and conflicting systems for ordinary daylight work. The makers and authors have classified all current plates and films, and in some cases given them a definite factor or other indication. This classification you should follow, ignoring any speed numbers (often purely fanciful) given by the makers of the material. The classification is necessarily approximate, but it will work with the particular meter or table for which it has been made.

When I use a Watkins meter I take the Watkins speed number from the Watkins list; when I use a Wynne meter I take the f/ number from the Wynne list; when I use the Burroughs Wellcome calculator I pin my faith to B.W. and let Scheiner and DIN go hang.

Or, if I were using a meter calibrated for DIN speeds, and a film with no such speed given, it would not take me long to find which number to call it.

Quite apart from the reliability of speed numbers, there is no doubt that we have available the fastest and finest emulsions that have ever been made, and we need not worry about the numbers on them. W. L. F. W.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, July 15th.

Borough Polytechnic P.S. Jumble Sale.
Hackney P.S. Gadgets.
Northants N.H.S.P.S. Evening Walk: Harpole to Flore.
Rochdale P.S. "Some Pictures and Why they were Made." H. Gidman.
Stockport P.S. "Lecturettes" by Members.

Thursday, July 16th.

Armley and Wortley P.S. "Facts about Focal Length and the Field Camera." Mr. Storey.

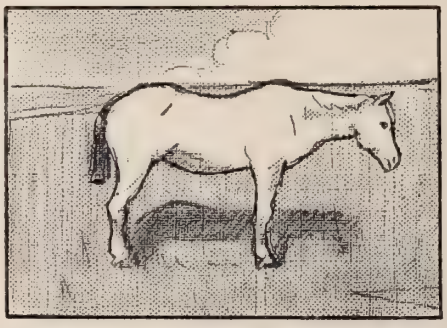
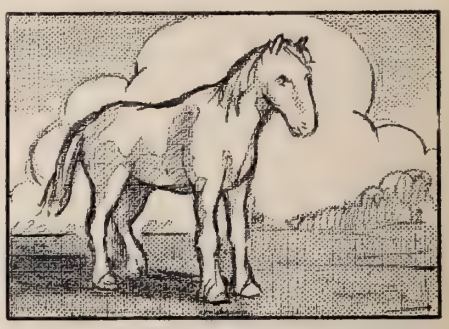
Picture Points

No. 8 (New Series) *by RICARDO*

Hints on Animal Photography.



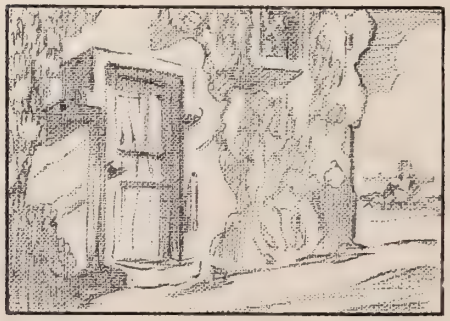
AN always popular subject with beginners, animals can be the most patient of models and seldom suffer from camera-consciousness like human beings. But they all have their best " side " or viewpoint, and much patience is called for unless they can be persuaded to sit in the right position. One cannot give the best viewpoint for every animal and bird, as all have their own characteristics, which must be studied individually ; but a few hints on the more common animals will be of help.

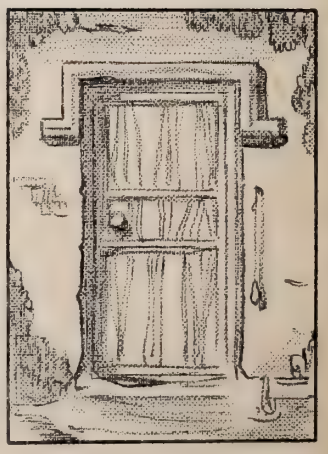


If we compare the two portraits of the bear on the left we can appreciate the advantage of a reasonably high viewpoint as seen in the lower sketch. Very often, the quaint general pose of the animal persuades us to make an exposure, but if it is only the head that we require, then a low viewpoint will accentuate the snout and only give a foreshortened view of the structure of the head.

If the position of the animal happens to be ideal, but the background is nothing but iron bars, it is better to expose as it is and remove the bars from the print later. It is immaterial if the mouth happens to be open, but do not expose should the tongue be hanging out.

Another mistake that beginners are prone to make with four and even two legged animals is that of exposing when both or one of the farther legs are immediately behind the nearer legs. This is shown in the first sketch of the horse, which appears to have only two legs. Always endeavour to show the right number of legs, as seen in the second sketch, even if it means altering the viewpoint of the camera ; a three-quarter front view is generally the best. Notice, too, how a lower viewpoint prevents the horizon from coinciding with the horse's back. If, after all, the animal, or whatever it may be, is listless and uninterested, very often an unusual noise, such as a squeaker or some peas in a small tin, will arouse its interest and result in a very spirited pose. Very seldom is a three-quarter front view, such as we have just discussed, the best for birds, and here a profile is often the most interesting. With a bird like the swan in the top sketch, the graceful curves are seen at their best in this side view.



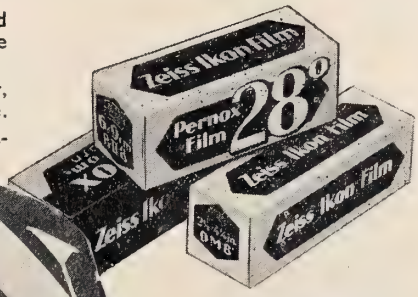


Record versus Pictorial Prints.

THE beginner in photography usually regards a camera as a technical instrument for providing an exact reproduction of any subject that is before the lens. The sharper the definition of that subject, the more satisfied he is and, of course, he prefers the negative and print to be on the " hard " side, as this seems to improve the detail. Then comes the time, the transitional stage, when he begins to realise that there is something more than merely copying or recording the various subjects, whether they are relatives in the garden or pretty villages.

It is the arrangement of these subjects that should be considered before the exposure is made, and when he aspires to competition and exhibition work he realises that the technical side of the hobby, although vitally essential, is but a means of producing a negative and print, and that unless the idea, the composition and lighting, etc., are pleasing, the print loses marks.

The sketch on the right is what would be termed a " record " of the doorway and, although excellent for its purposes, would not have such a general appeal as the left-hand sketch of the same subject. The door is still the main point of interest, but the different viewpoint and the lighting have resulted in a pictorial presentation instead of a " copy."



You CAN'T rely on the Weather—

BUT YOU CAN ON...

Zeiss Ikon film is consistently good. It has great latitude and thus corrects errors in exposure—always difficult to judge correctly in our capricious climate.

Zeiss panchrom film gives perfect monochrome rendering of colour, and it is as fast (27° Sch.) as a really fine grain film can be.

And an exclusive feature is the special coating, giving protection from scratches.

ZEISS IKON FILM

ZEISS IKON

Zeiss Ikon film costs no more than ordinary film, and is obtainable from most up-to-date dealers.

ZEISS IKON LTD.

Granville PRODUCTS PRODUCE BETTER PICTURES

Whether used by the novice, the advanced worker or the professional, GRANVILLE PRODUCTS ensure the maximum results with the minimum effort. Every day we receive testimonials from new customers who are surprised and delighted—surprised at the quality obtained at such a low price—delighted with the ease in which such perfect pictures are obtained. If you are just beginning, start right with " GRANVILLE " ; if you have years of experience, change to " GRANVILLE." You will never change again !

"THE GRANVILLE GUIDE"

This new publication is a superb 16-page de luxe illustrated edition. Specially issued for users of Granville Photographic Products, it contains up-to-date working instructions, formulæ, and many useful articles specially written by our own experts. A complete list of all materials is also given, including many new lines. If you have never communicated with us before, **write to-day for your copy.** Applications should be addressed to : PUBLISHING DEPARTMENT, Granville Gulliman & Co., Ltd., P.O. Box 3, Leamington Spa.

If you have previously communicated with us, please do not apply, as a copy will be sent to you.

Get a Rolleiflex and Win the Prizes

The picture reproduced here won the *Daily Herald* £2,500 first prize last year. Numerous other prizes have been awarded in photographic competitions to Rolleiflex owners. This proof of Rolleiflex superiority in capturing charming and unusual subjects should influence you in your choice of a miniature camera.

Rolleiflex takes 12 exposures on 3¼×2¼ 8-exposure roll film for 1/-. The square format proves an advantage for enlarging or trimming your print to any desired shape. Fitted with one-lever Compur shutter with speeds from 1 to 1/500th sec., Time and Bulb. The Zeiss Tessar f/3.5 lens is fast enough for all subjects in any light.

Numerous accessories are available which will convert the Rolleiflex into a plate camera for single exposures or for taking pictures on 35-mm. ciné film or for stereo work, etc. **Price £25.**

Reproduced by courtesy of the "Daily Herald."

Rolleiflex

Look for this sign on your Dealer's window.

ASK YOUR DEALER

to show you the Rolleiflex and complete range of accessories, or write to Sole Importers.

"THE GOLDEN BOOK OF THE ROLLEIFLEX."

Contains 127 masterpieces of photography together with the technical data. Will inspire and help every camera owner to better and more enjoyable photography. **Price 7/6**

Sole Importers :

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

When to Use Camera Angles

By "ACTINOGRAPHIST."

"CAMERA angles" first came into prominence through the great part they played in the early work of present-day serious cinematographers. Because they regarded this as something new, sculptors, "still" workers and poster artists became attached to the principle, so much so that to-day it is impossible to consult any advanced work without encountering virile examples of this attachment.

However, camera angles are not merely "something new" to the responsible ciné worker: they have now become part of the recognised plan of film construction. With their aid pictorial composition—not always an easy thing in motion-picture work—can be effected, ideas can be expressively conveyed and various moods can be emphasized. With their aid, too, emotions and reactions can be created, meaning can be laid bare without confusion, and the dramatic force of acting—even amateur acting—can be greatly enhanced.

It is in its ability to accomplish these things that the device of camera angles proves its worth, but it is in knowing when to apply the device that amateur cinematographers find their greatest difficulty.

Selection.

Angles are not arrived at or determined by haphazard selection. If they were, it is probable that more harm than good would result. Instead, each is chosen for a particular purpose and because it will produce an effect more satisfactorily than will any other shot.

The particular purposes for which they are chosen and the extent to which the angles are exploited will, of course, depend upon the worker's own knowledge of what their introduction can accomplish. And although this knowledge may not be possessed by every beginner, its acquisition is merely a matter of developing "film sense."

Impersonation.

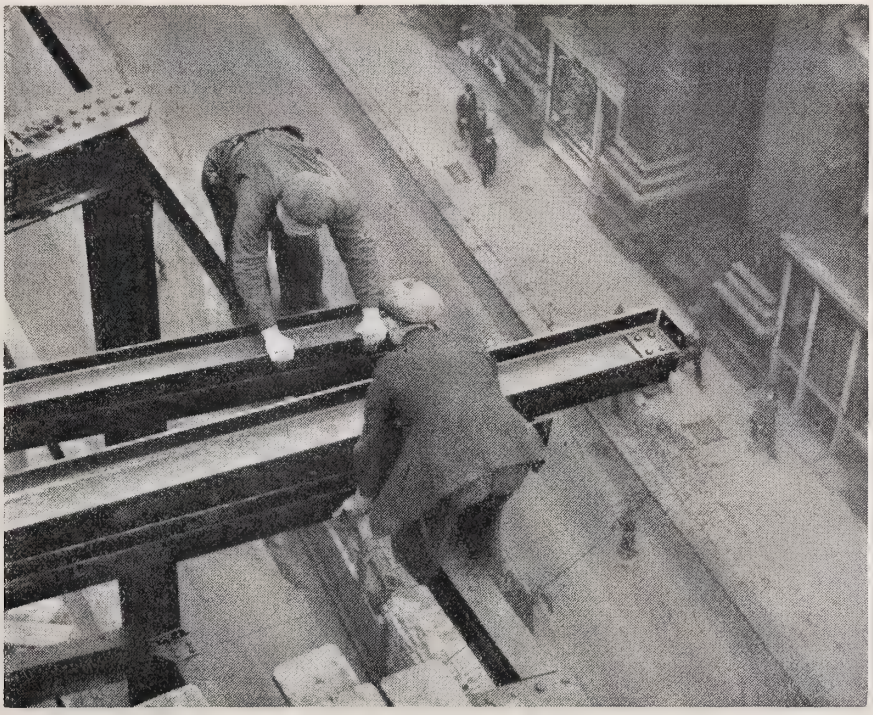
Probably, however, camera angles will for a long time to come be employed mainly for their value in impersonation; that is to say, in presenting the spectator with exactly the view he would enjoy were he actually watching the occurrences in person.

For this purpose, the camera can indeed be made to take his place at the actual filming, for—since the angle subtended by the camera lens does not appreciably vary with the angle of human vision—the screened version will lose nothing beyond that which any solid arrangement loses when it is reproduced *in plane*.

Practical Notes.

To secure best results in this particular case, it is necessary to remember little beyond the fact that the angle of the camera must always coincide with that from which an imaginary spectator would himself witness the action. Thus, assuming the spectator to be a policeman engaged in watching the attempts of a burglar to escape over the roof-tops, the camera would be made to incline violently upwards.

Conversely, to place the spectator for a moment or two in the position of the burglar carefully observing the manœuvres of the policeman, the camera would be taken to the roof-tops and a sequence of shots—looking downwards—would be made from that point.



Reactions.

To create moods and emotional reactions, it is necessary to understand the feelings normally produced in real life when objects or persons are regarded from different angles—geometrical angles.

If, for example, the cinematographer be inclined to go down into a cellar and to look (at an angle inclining upwards) through the cellar flap, objects and beings beyond it will be found to assume far greater importance and significance than they would were he to view them from, say, an upper storey window (where the angle formed would be more acute as well as inclining *downwards*). In this latter case, the objects would lose in significance; and that represents the whole basis of angle work undertaken with the object of creating different moods and emotional reactions.

Dangers.

Like most other good things, the device of camera angles is liable to abuse and misuse. It may, as the writer has already pointed out, be adopted merely because it represents "something new," and not because it fulfils one of the positive capacities for cinematic interpretation which he has attempted to outline in this paper.

A good example of the correct use of the high viewpoint camera angle.

This misuse of the device is fraught with danger, for instead of enhancing the filmic beauty of any shot the effect will be to create a freakish or, at least, a puerile impression.

Another danger in the application of angle technique is repetition. This can, up to a certain point, be sustained in most things—and then monotony must inevitably creep in. The use of an appreciable number of camera angles, provided they are diverse and varied, is not necessarily repetition and may, therefore, be indulged in with less fear of ill consequences resulting. But the frequent repetition of any particular angle or angles, even when applied to different shots—is a definite cause of monotony and boredom.

There are, of course, other dangers more remote than the above, but they are not likely to be encountered or even to be recognised by the majority of enthusiasts. In any case, it is impossible within the scope of a short article to deal with more than the main features of angle work as it affects the ordinary amateur. Nor must it be forgotten that the technique is by no means a settled or fixed matter. New uses and applications are constantly being found for it, and we cannot advance beyond the times.

Filming the Unfilmable

By NORMAN HUNTER.

I DO not think I should be far out if I said that light is one of the chief difficulties with which the amateur cinematographer is faced. Not so much the difficulty of judging the correct exposure for varying light conditions; there are plenty of efficient and not very expensive appliances for this purpose on the market; but the difficulty of getting sufficient light on many interesting subjects.

For instance, you may be taking some scenics and probably you find one or two interesting churches which you want to include. As far as the outside of these buildings is concerned everything is plain sailing. But what about the interiors? Without a shot or two of the interiors your scenes are incomplete; yet there is neither sufficient natural light nor the means of introducing sufficient artificial light. The fastest film, the slowest motor speed, and the widest lens aperture together are not equal to the occasion.

There is, I admit, one very easy way round the difficulty. But it is only a way round and not a final solution of the problem. You can take a snapshot, or rather a time exposure with your ordinary camera, and film an enlargement from the negative in your title maker. If it is kept on the short side it may prove satisfactory.

Here is the method I used recently to get a moving shot of the interior of a warehouse which I had to include in a commercial film I was making. There was nothing like enough daylight in the building and no means of getting enough artificial illuminant. I had two still photographs taken by flashlight. Both were taken with the camera in the same position, but it was swung round slightly for the second shot. This gave me two pictures which, when matched together and mounted as one, formed a single long print. I put this in the title maker and drew it slowly through with the camera filming it as it went. Result, a perfect "pan." shot.

Another way of using a still photograph without producing an utterly lifeless effect is to put the photograph in the title maker and run a title along the bottom describing the scene. Film with the camera upside down, using stop action, and remove the title letter by letter. The final result will give a still picture with the title running itself across the bottom.

Talking of photographs used in the title maker brings me to an easy method of making wipe dissolves without the need for cutting the film or making any complicated joins and splices.

Take two photographs, one of each scene you wish to form the dissolve. Lay Scene 1 on top of Scene 2 in the title maker upside down. Film a short length of Scene 1 then remove it and cut it neatly through the middle, vertically. Put it back, upside down as before. Start your camera and slowly draw the two halves of the photograph apart—one to the right and the other to the left and completely out of the title maker, leaving Scene 2 visible beneath it. When you splice that length of film right way up in its position afterwards you get Scene 2 visible first, then Scene 1 slides in from each side, the join down the middle vanishes and leaves Scene 1 complete.

Needless to say you can make a run of half a dozen or more scenes like this. All you need is a still photograph of each scene. As long as you use only a short shot of each scene the fact that they are not actually moving scenes will not be apparent, providing there are no close-ups of living beings. If you use a series of these changes have the pictures sometimes run in from side to side, sometimes from top and bottom, sometimes diagonally. It is only a matter of cutting the picture accordingly.

A Prize Competition for Novices

THIS competition is specially for those readers of "The A.P." who are Novices; that is to say, amateur photographers who have never won an award of any description in a photographic competition, and preferably those who are only just starting photography.

The prizes will be awarded for the best snapshots of subjects that the beginner usually attempts. These include snapshots of the family, groups, or single figures taken at home or on holiday, either indoors or outdoors, and landscape and beach scenes, etc., with figures. The arrangement of the subject and the pose of the figure or groups is a matter left entirely to the discretion of the competitor.

The entries will be restricted to contact prints. These may be mounted if preferred, and the smallness of any print will not affect its careful consideration in this competition. The rules are very simple, but should be read carefully.

Our readers who are Novices have all the summer in which to make their prints for this competition, and the prizes are worth having.

THE PRIZES.

The prizes in this competition will consist of supplies of roll film or plates (for those winners who happen to use a plate camera), as follows:—

The First Prize will be TWO ROLL FILMS EVERY WEEK FOR ONE YEAR.
The Second Prize will be TWO ROLL FILMS EVERY WEEK FOR SIX MONTHS.
The Third Prize will be ONE ROLL FILM EVERY WEEK FOR SIX MONTHS.
Twelve Prizes of ONE ROLL FILM EVERY WEEK FOR THREE MONTHS.

The winners of these prizes will thus be encouraged to continue their photographic activities throughout the year with a supply of free film.

RULES.

Each print must have affixed firmly to the back a coupon which will be found in our advertisement pages each week. This must contain title of print, and name and address of competitor.

The latest date for receiving entries is September 30th. This will give new readers who are Novices, and who intend entering this competition, every opportunity of improving their work during the next three months by reading *The Amateur Photographer* every week and obtaining their competition prints during the summer holidays.

The decision of the Editor in all matters relating to this competition must be accepted as final.

All entries must be addressed as follows: The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the outside of the envelope or package must be clearly marked "Novices' Competition."

Further reference to the competition will be made week by week, and hints given for the best treatment of various subjects for Novices.

Exhibitions and Competitions

CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, July 31. Rules in the issue of June 24.

Wallace Heaton "35-mm. Film Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

XVme Salon International de Photographie de Bruxelles.—Open, May–October. (M. Maurice Broquet, Secretaire du Salon, Rue du Sceptre, 77, Brussels.)

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

Folkestone C.C. Competition in connection with Folkestone Floral Festival.—Open, July 8–18. Cash prizes. Entry forms available from photographic traders in Folkestone. (E. F. Davidson, 44, Wear Bay Crescent, Folkestone.)

The Listener. Cash prizes for photographs under general title "Conversation Pieces."—Open, July 8–August 25. Entries, Monday morning of each week. First selection in *The Listener* of July 22. (Editor, *The Listener*, Broadcasting House, London, W.1.)

Western Salon of Photography.—Open, July 11–18. (Rev. R. J. Attfield, Hennock Vicarage, Newton Abbot, Devon.)

Chicago International Salon.—Open, July 23–October 4. (Alex. J. Krupy, Chicago C.C., 137, North Wabash Avenue, Chicago, Ill.)

I International Kunstphotographische Austellung in Karlsbad.—Open, July 18–August 9. (Hugo Heyer, Schulgass, 26, Karlsbad.)

Thirteenth Midland Salon of Photography.—Open, June 20–July 18. (Geo. T. Boulton, The Art Gallery, Pall Mall, Hanley, Stoke-on-Trent, Staffs.)

XXXIe Salon International D'Arte Photographique de Paris.—Open, October 3–18. (M. E. Cousin, Secretaire de la Société Française de Photographique, 51, Rue de Clichy, Paris (9E).)

Radio Photo-Club de Spa. IVme Salon International de Photographie.—Open, August 9–30. (M. René Chalsèche, Avenue Marie-Thérése, 13, Spa, Belgium.)

I Salon Internacional de Fotografia de San Sebastian.—Open, August 5–20. (Sr. Secretario General, Salon Internacional de Fotografia de San Sebastian, Calle San Marcial, 26, San Sebastian, Spain.)

Forty-fifth Toronto Salon of Photography.—Entries, July 25; open, August 28–September 12. (W. H. Hammond, Secretary, Toronto Salon of Photography, 2, Gould Street, Toronto, Canada.)

Museum and Public Library, Maidstone. Exhibition of Nature Photography.—August 15–29. (C. E. Fisher, Museum and Public Library, Maidstone.)

Tweede "Focus" Fotosalon.—Entries, August 10; open, September 12–27. (Focus, Ltd., Fotosalon, Bloemendaal, The Netherlands.)

South African International Salon.—Entries, August 14; open, October. (Hon. Secretary, Johannesburg P.S., P.O. Box 7024, Johannesburg, South Africa.)

Royal Photographic Society Annual Exhibition.—Entries, August 14; foreign entries, July 31; open, September 12–October 10. (Secretary, R.P.S., 35, Russell Square, London, W.C.)

Buffalo C.C. Fourteenth Annual Salon of Photography.—Entries, August 15; open, September 6–27. (H. W. Schonewolf, 528, Elmwood Avenue, Buffalo, N.Y., U.S.A.)

Morecambe, Heysham and D.P.S.—Entries, August 19; open, September 9–16. (James F. Levisohn, B.Sc., 5, Douglas Drive, Heysham, Lancs.)

Fotoclub Zagreb. Fourth International Salon of Photography.—Entries, August 20; open, October. (Fotoclub Zagreb, Masarykova II, Zagreb, Yugoslavia.)

London Salon of Photography.—Entries, September 2; open, September 12–October 10. (Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.)

Lincoln Camera Club.—Entries, September 5; open, October 15–November 12. (Miss E. Redfern, 146, Burton Road, Lincoln.)

XII Salon International de Fotografica, Zaragoza, Spain.—Entries before September 10; open, October. (Secretary, Sociedad Fotografica de Zaragoza, Plaza de Sas, 7, Zaragoza, Spain.)

Third Canadian International Salon of Photographic Art.—Entries, September 10; open, October 23–November 15. (Exhibition Secretary, Canadian International Salon of Photographic Art, National Gallery of Canada, Ottawa, Canada.)

Windlesham C.C.—Entries, September 10; open, September 25–26. Classes for members (Beginners, Advanced, Professional, also Open Class). (J. C. Hayward, Hallgrove, Bagshot, Surrey.)

IV International Hungarian Exhibition.—Entries, September 15; open, October 24–November 9. (Secretary, Magyar Amatörfényképezök, Orsz. Szövetsége, Budapest VII, Erzsébet-körut, 9, Hungary.)

Rotherham P.S. Forty-seventh Annual International Exhibition.—Entries, September 21; open, October 14–17. (E. George Alderman, Ruardean, Newton Street, Rotherham.)

Service Co. (London), Ltd., Happy Camp Snaps Competition. Cash prizes.—Entries, September 30. (Service Co. (London), Ltd., 273, High Holborn, London, W.C.1.)

Coronet Midget Camera Competition. Cash prizes.—Entries, September 30. (Coronet Camera Co., 310, Summer Lane, Birmingham, 19.)

Eighth International Photographic Salon of Japan.—Entries close in Tokyo, September 30; open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo Asahi Shimbun, Tokyo, Japan.)

Johnson's "Holiday" Competition. Cash prizes.—Closing date, October 31. (Johnson & Sons, Ltd., Hendon, N.W.4.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Entries, November 1; open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., A.R.P.S., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.) Entry forms obtainable also from the Editor of *The Amateur Photographer*.

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Entries, November 15; open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr. 69, Antwerp.)

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, S.E.1. Price 2s. 6d.

16. MOUNTANTS

PHOTOGRAPHIC prints are mounted on card or mounting paper by one of the following methods: (1) by being "tipped" on with a strong adhesive, such as "Seccotine," applied to the back at the two top corners or the top edge only; (2) by being pasted all over the back with a suitable paste before affixing to the mount; and (3) by dry mounting.

The first method is obvious in its application. The third will be dealt with in a later contribution. The second method is the one most frequently used by amateurs, and the following are suitable pastes or mountants for the purpose.

Starch Paste.

This is a very quickly prepared paste, is clean and very adhesive when fresh, but does not keep well. It is made by mixing pure starch with a small quantity of cold water to make a very stiff cream. **Boiling** water is then poured on in a thin stream, stirring the mixture all the time until the mass turns to jelly. It is ready for use as soon as it is cold. Apply with a stiff brush.

Dextrine Mountant.

This is the most reliable paste for mounting photographs. A good formula is as follows:—

Best white dextrine	14 oz.
Water	20 oz.
Oil of wintergreen	20 drops.

The water should be heated to about 160° Fahr. The dextrine is then stirred in slowly until it is dissolved. The oil of wintergreen is added, and the stirring continued for some time. Pour into suitable wide-mouthed bottles to cool. It will take several days to set into a firm white paste, and is then ready for use. This paste keeps well.

Starch-Dextrine.

This combination makes a good paste for all-round purposes and keeps well.

Pure starch	120 grs.
Best white dextrine	4 oz.
Sodium carbonate	10 grs.
Oil of wintergreen	20 drops.
Water	10 oz.

Mix in the above order to make a thin cream free from lumps. Bring to the boil, stirring all the time, and pour into jars. This will take a day or two to set and it is then ready for use.

17. AN ENLARGING TABLE

Distances from negative to lens and from lens to paper.

Focus of Lens, in.	TIMES OF ENLARGEMENT. 2	3	4	5	6	7	8
	in.	in.	in.	in.	in.	in.	in.
2	6	8	10	12	14	16	18
	3	2⅔	2½	2⅖	2⅓	2⅐	2¼
2½	7½	10	12½	15	17½	20	22½
	3¾	3⅓	3⅛	3	3	2⅞	2¾
3	9	12	15	18	21	24	27
	4½	4	3¾	3⅖	3½	3⅜	3⅜
3½	10½	14	17½	21	24½	28	31½
	5¼	4⅔	4⅜	4⅕	4	4	4
4	12	16	20	24	28	32	36
	6	5⅓	5	4⅘	4⅔	4½	4½
4½	13½	18	22½	27	31½	36	40½
	6¾	6	5⅝	5⅖	5¼	5⅛	5
5	15	20	25	30	35	40	45
	7½	6⅔	6¼	6	6⅕	6⅐	5⅝
5½	16½	22	27½	33	38½	44	49½
	8¼	7⅓	6⅞	6⅗	6 5/12	6⅖	6 3/16
6	18	24	30	36	42	48	54
	9	8	7½	7⅕	7	6⅐	6¾
7	21	28	35	42	49	56	63
	10½	9⅓	8¾	8⅖	8⅙	8	7⅞
8	24	32	40	48	56	64	72
	12	10⅔	10	9⅗	9⅓	9⅛	9

First ascertain the focal length of lens in enlarger. Then decide on number of times enlargement to be made. This is found by comparing the length of diagonal of the negative with that of the enlargement decided on.

The point of intersection of the vertical and horizontal columns gives the distances required.

The greater of the two numbers where the two intersect is the distance from lens to the sensitive paper. The lesser is the distance from lens to negative.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned.. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Paper Roll Negatives.

Can you oblige me with the developing and reversal formula suitable for the paper roll negatives? J. O. (Buxton.)

If the paper films to which you refer are what we expect them to be, they are intended to be developed as negatives, and are not capable of reversal. The negative is set up in a good light and re-photographed to give a bromide print. It is intended that this work shall be done professionally, and is almost outside the scope of the amateur.

Photographing Bronze Figures.

I have to photograph a good many old bronze figures, and as you see from sample herewith they do not come out well. They are too dark, except the high-lights. Where am I going wrong? L. P. (Purfleet.)

Assuming the specimen is a fair sample, you are very seriously underexposing. The high-lights are too strong and crude, and there is neither form nor detail in the shadows. Put the figure a little farther from the window, and use a reflector on the shadow side, but not close enough to suggest a second source of light. Give such an exposure that the shadow detail comes out readily, and stop development before the high-lights become too dense.

Negative from Print.

I want to get a new negative from an enlargement which has been considerably worked up. Can it be done by contact, exposing through the paper? P. W. E. (London.)

It can certainly be done after a fashion, but we should not recommend such a method. You would get a grainy image, and if the enlargement is of considerable size the plates would be very expensive. The working-up may have a different effect by transmitted light from what it has by reflected light. The best plan is to set the print up in even diffused light, copy it, and make enlargements from the negative.

Drying Plates.

When I put a dozen 3½ × 2½ plates in a rack to dry they take an enormous time. How can I hasten matters? C. C. (Ilford.)

By taking them out of the rack. Remove surface water from both sides, and stand the negatives on edge singly along a shelf, with the top edges leaning against the wall. They will dry evenly in a few hours.

Rapidity of Lenses.

Is it a fact that all lenses at f/4.5, whatever their focal length, would require the same exposure under the same circumstances? Or can a quicker exposure be given if the lens has a short focus? S. F. (Highbury.)

The relation between the diameter of the stop and the focal length remains the same; that is to say, the diameter of the stop f/4.5 is between one-fourth and one-fifth of the focal length, whatever that may be. Theoretically, therefore, the exposures should be the same at that aperture. In practice, the amount of light passed is not the same in all cases owing to variations in construction. In a general way, the larger the number of separate component glasses the smaller is the percentage of light passed.

Formalin.

I should like to try formalin for hardening prints before glazing, as I have noticed that you recommend it. How is it made and used? R. E. F. (Aberdeen.)

Get from a dealer a small bottle of formalin, which is in liquid form. Measure out a fluid ounce of it, and add 9 oz. of water. When the prints are washed, put them into this solution, and keep them moving about for three or four minutes so that the solution has free access to the gelatine, which it soon hardens. Transfer the prints straight to the glazing slabs. The solution can be used again and again, but becomes weaker, as the prints carry water into it and take formalin out of it.

Monthly Competitions.

When do the rules of your competitions appear, and what are the conditions? R. W. (Toronto.)

The rules governing our monthly competitions are published, together with the names of all the prize-winners of the preceding month, in the last issue of each month. The conditions of entry are clearly given, so that we can offer you no further information on the subject, as it would require too much space for a short reply.

Paper Negatives.

How are paper negatives enlarged? They seem too opaque to print in the usual way. F. A. P. (Newport.)

The sort of negatives to which we expect you refer are set up in a good even diffused light and photographed on to bromide paper in order to get a print. It is intended that this work shall be done by firms with the necessary apparatus and equipment, and it is a rather difficult matter for an amateur to tackle successfully.

Fixing-Hardening Bath.

Can you tell me of a simple solution to add to my hypo bath so that it will harden the films while fixing them? W. D. (East Ham.)

Make up the hypo solution first to a strength of half a pound in 30 oz. water. Then prepare the following, dissolving the ingredients in the order given.

Warm water	4 oz.
Sodium sulphite	½ oz.
Glacial acetic acid ..	½ oz.
Alum	½ oz.

Add this very slowly to the hypo solution with constant stirring.

Two-colour Print.

Can you tell me how the two different colours have been obtained on the enclosed print? M. M. (Cork.)

We have no doubt that the warm and cold tones have been obtained by the familiar double toning of self-toning paper. With most papers of this type you can get a much colder (bluer) tone by giving a preliminary bath of common salt. Instead of immersing the print for this purpose, the salt solution is painted on to parts of the dry print with a brush, and allowed to act for the time stated in the instructions. The print is then washed and placed in the usual hypo bath. The parts not treated with salt are then warmer (redder) than the others.

Sulphide Toning.

Will you please give me the necessary formulæ for the sulphide toning of bromide prints? C. H. (Bolton.)

After thorough washing bleach the prints completely in the following bath:

Potassium ferricyanide ..	300 grs.
Ammonium bromide ..	100 grs.
Water	20 oz.

Wash well and redevelop in:

Stock sulphide solution ..	3 oz.
Water	17 oz.

The stock solution referred to is made by dissolving 2 oz. of sodium sulphide in boiling water to make a total volume of 10 oz.

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

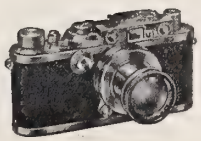
All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.



Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

The simplest way to obtain a good

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

MALLINSON'S

Free-Lancing Services

NO Free-lance can succeed regularly without a thorough training such as he gets at MALLINSON'S. Mr. Mallinson was at one time schoolmaster, known for his original methods of teaching to Educationists throughout the world. SOUND TUITION, INDIVIDUAL COLLABORATION, and TREMENDOUS ENERGY on Mr. Mallinson's part are the sole reasons for the great success of his pupils. Consult past and present members on these points.

PLACING PICTURES IS THE NATURAL OUTCOME OF HIS TRAINING. Here is a picture which keeps selling and selling.

THIS very ordinary snapshot, taken on Aberdovey golf-links, has **now sold 49 times,** and has earned its owner over £28. It will sell again. How is it done? MALLINSON'S will soon make this clear when you join their Services. Note, by the way, that there is scarcely any work to be done as exercises in the course. The work is pleasurable and leisurely; newsy subjects are rarely suggested.

ENQUIRERS sometimes endeavour to join MALLINSON'S for the placing of photographs alone, but such offers are invariably turned down. IT IS IMPOSSIBLE TO PLACE WORK FOR UNTRAINED PEOPLE. To try to do so would lead to bitter disappointment for both the pupil and Mr. Mallinson. There is no correspondence tuition anywhere in the world in which so much skilled, hard work is done for each individual pupil as is done at Cambridge for MALLINSON'S people.

A COURSE lasts about 14 months, less by arrangement. **Thousands of pictures per annum are placed for members on a very small commission basis. About 800 prizes in Photographic Competitions are won annually by the Members of MALLINSON'S SERVICES, including practically all the big prizes.** Verification of all statements appearing in advertisements, and hundreds of unsought testimonials from enthusiastic members, can be seen at the Rose Crescent offices.

JOIN MALLINSON to-day, and win a prize or two during the summer. Ensure yourself a good time by learning what fun there can be in your hobby. Your work will not become commercialised, nor will your amateur status be lost.

DUNSCOMBE'S

"PERSONAL" CAMERA COLUMN

'SERVICE SUPREME'

ABOUT BABIES

Reading in a somewhat obscure ladies' journal mainly devoted to knitting and slimming we learn that last week was National Baby Week, the aims and objects of which were presumably to make every effort to increase the nation's population (apparently all in seven days). This national event permits us to tie-up with photography and in particular—cameras, leading us back to the time when the stork paid its first visit to the Wetzler factory of Messrs. E. Leitz, from whence the now famous Leica camera was born, thus commencing the mass production of baby cameras.

• • •

It has been said that if we were intended to wear top hats and spats, these would have been provided at the very outset of life, which, of course, is perfectly ridiculous, especially when the same argument is applied to the baby Leica camera, which would have no conception at birth as to what "trimmings" would be expected of it in later years. The Leica body natural is just as likely to be christened Aroog, Achoo or Adkoo, depending upon the size of its "eyes" (see page 4 of Leica price list, free on application).

• • •

This is not too depressing for the baby Leica having the knowledge when old enough to bear the burden of its own family circle, consisting of Thambar as first cousin, Aunt Hektor, chromium-plated old Uncle Summar, not withstanding twin-brother Elmar and Grandma Hoopy. Surely it behoves one of us to write the private life of the world-famous baby camera and the entire Leica family, details of which we will gladly supply on request.

• • •

Baby-farming just isn't done in the best of society except when applied to the baby Leica camera, in which quite a considerable amount of trade is exchanged every day, so you can write to us or call for the latest Leica Stock Prices and inspect the baby before purchase on seven days' approval, which is more than we could do with young George.

MORE CORRESPONDENCE

DEAR CHARLIE,—Atomal does not prevent night starvation; it is a developer.

WINNIE from Waterloo asks if it is all right to over-expose during the winter. Well, Win—it all depends.

TO ANXIOUS ANNABELLE.—Fiakuchrom is just the code name for a Leica ball-jointed tripod head in chrome finish (price 10s. 6d.).

No, CONNIE—Hyposulphite of Soda is not the cutiest thing in slimming salts, but it will fix fotos.

PROF. KUTZY propounds the theory that if he makes an enlargement the size of a house, it will be difficult to get it out of the dark-room. We have agreed.

BUY A WESTON METER ONCE FOR CORRECT EXPOSURES ALWAYS

A Weston Meter will save all your precious shots—get one now and shoot with confidence. If you are confused by the un-correlated film ratings of H. & D., Scheiner or DIN, you can forget it if you own a Weston. All films, however rated, are tested by Weston and given a Weston number. The instruction book tells you the Weston number of the film you are using. By setting the meter accordingly, correct exposures for every kind and rating of film can be read off without calculations of any sort. So when you buy a Weston Meter you buy a complete system of film speed ratings. Other Weston features are : Absolute permanence of the "**Photronic**" light cell—it will not vary with age, sunlight cannot harm it, and greater sensitivity—indoor shots as well as low light values out of doors. Narrow angle of view. Simpler to use. Weston quality and dependability.

Leica Meter, made specially for Leica cameras **£5 : 19 : 0**
Universal Meter, for all still and ciné cameras Leather case, 10/- extra.

Call for a demonstration, or write or phone for literature (Mayfair 7511).

Can you take snaps like this?—

THEN SEND YOUR ENTRIES FOR WALLACE HEATON'S

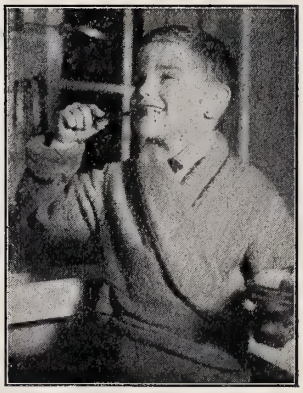
35-mm. STILL CAMERA COMPETITION

Open to users of cameras taking 35-mm. film as their negative medium, including Leica, Contax, Contaflex, Retina, Rolleiflex (if used with cine-film attachment).

The Competition is open until September 30th. Your photographs can be of any subject—but they must be taken on 35-mm. film. Prints should not be smaller than 6×4.

Any number of prints can be sent in in any one week, but each photograph must have the coupon attached. In addition to the big prize

A WEEKLY PRIZE OF £1-1-0



will be awarded every week for the best photograph submitted in that week.

Each photograph must have on the back a coupon as below, and the name and address of the sender, the make of camera and material used.

For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s. ; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of prize-winning prints must be made over to us without further payment.

In addition we are offering a special prize of £1 1s. per month for the best photograph submitted depicting a person or persons using a camera purchased from Wallace Heaton Ltd.
All prints will be judged at the end of the Competition for the final prize of £25 cash. Acceptance of these rules and conditions is a specific condition of entry.

£25 CASH PRIZE will be awarded for the best picture submitted during the run of the Competition.

★ This snap won a cash prize in a recent Wallace Heaton competition.

COUPON which must be attached to your entry.

THE FIRST OF NINE MONTHLY PAYMENTS SECURES ANY ITEM!

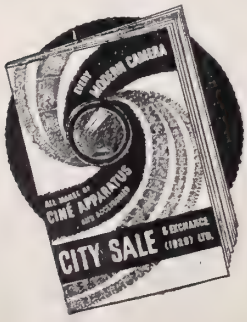
BUY WHERE the RANGE and SERVICE ARE BEST!

EXPERT UNBIASED ADVICE ON YOUR CHOICE OF APPARATUS!

★ THE FINEST SELECTION

Every well-known maker of still and ciné apparatus is represented in our huge range. We stock every accessory, too, and any new instrument introduced by any maker is to be seen **first** at our branches. Free demonstration of any apparatus given with pleasure.

★ VERY EASY PAYMENTS



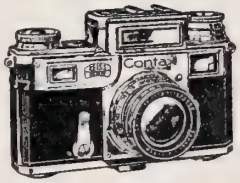
Do you know that the first of nine monthly payments secures any instrument at City Sale? Why not buy this easy way and enjoy the use of your purchase while paying the balance. No harsh formalities or personal questioning.

★ EXCHANGE Allowances

Why not let us have your surplus apparatus, still or ciné, in part payment for your fresh purchase? We are famed for our exceptionally high exchange allowances. Send your used camera with your order and let us quote you on it.

★ CATALOGUES POST FREE

The one illustrated below contains 84 pages of newest still and ciné apparatus and accessories. There is also our latest bargain bulletin, which contains hundreds of used but guaranteed snips at pounds below list prices. Both lists are free. Send at once.



THE NEW 16-mm. "MAGAZINE" CINÉ-KODAK

Nine monthly payments of 93/4.

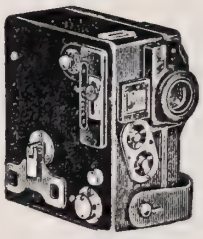
THE NEW "CONTAX III"

with built-in photo-electric exposure meter

In other respects Contax III does not differ from Contax II. Fitted with Zeiss Tessar lens, 2-in. focal length.

F/3.5 ..... **£53 : 0 : 0**
F/2.8 ..... **£55 : 15 : 0**
F/2 ..... **£63 : 0 : 0**
F/1.5 ..... **£78 : 5 : 0**

"OMBRUX"



The photo-electric cell meter with a marvellous lens which makes it the finest instrument on the market at such a price. Gives dead-accurate readings for still camera work. In ever-ready case..... **67/6**

RANGE-FINDER "BESSA"

With coupled range-finder and optical view-finder, fitted next to the focussing control. The famous trigger release is fitted under the baseboard. Yellow filter is incorporated for use when required. Compur **Rapid** shutter, speeded to 1/400th sec. With 4-element Skopar f/3.5 lens..... **£18:15:0**

Nine monthly payments of 43/9.

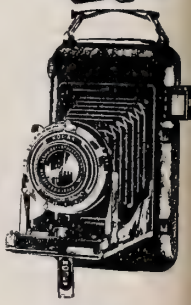
"DITMAR"

Visible footage indicator. Two speeds. Parallax compensation. Single picture device. Telephoto, portrait, wide-angle and filter attachments fitted by Universal screw mount. F/2.9 lens.... **£12:12:0**

Nine monthly payments of 29/5.

"EXAKTA"

For V.P. roll film. Picture is seen in the finder mirror exactly as it will appear in the film. Fitted with auxiliary mirror for eye-level work and magnifier for fine work, speeds from 12 to 1/1,000th sec., f/3.5 lens, from **£19:10:0**



Nine monthly payments of 45/6.

"ROLLEIFLEX"

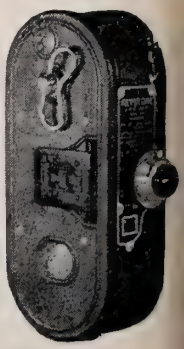
The easiest manipulated camera you could buy. Shows your picture full size and right way up on ground-glass screen. Fitted with Compur shutter, speeded to 1/500th sec., T. and B., and Zeiss Tessar f/3.5 lens.. **£25:0:0**

Nine monthly payments of 58/4.

"REGENT"

The latest model, taking 8 or 16 pictures on 3¼×2¼ roll film. Has coupled range-finder, optical eye-level finder, Zeiss Tessar f/4.5 lens, Compur shutter, speeded to 1/400th sec., complete with leather case.... **£20:0:0**

Nine monthly payments of 46/8.



Kodak Six-20, as well as other Kodak models from 5/- upwards, all in stock.

SUPER IKONTA

Takes 11 pictures on 3¼×2¼ 8-exposure roll film. Distance meter coupled with the focussing. Direct built-in view-finder, Compur **Rapid** shutter, speeded 1 to 1/400th sec. With f/2.8 Zeiss Tessar lens..... **£28:5:0**

Nine monthly payments of 66/-.

KEYSTONE "8"

One of the smallest and lightest ciné cameras in the world. Simple loading by daylight or at night. Is fitted with direct-vision and auxiliary view-finders. 3 speeds. Strong, silent motor takes 25-ft. films at a winding. Footage indicator, geared to mechanism. Interchangeable lenses. With strap handle for convenient carrying.

With f/1.9 lens **£16:16:0**
F/3.5 ..... **£10:10:0**

Nine monthly payments of 39/3 or 24/6.

"ROLLEICORD II"

Automatic film wind. New type reflex hood, and larger magnifier. Depth of focus and focussing knob combined. Engraved exposure plate. Takes all Rolleiflex accessories, excepting angle mirror. Takes 12 exposures on 3¼×2¼ roll film for 1/-.

With Zeiss Triotar f/4.5 and Compur shutter, 1/300th, T. and B. **£14:10:0**

Zeiss Triotar f/3.5 ..... **£17:10:0**

Nine monthly payments of 33/10 or 40/10.

THIS IS OUR BARGAIN PAGE . . . but there is only room to give just a rough idea of the hundreds of similar values we have in stock. Every instrument, although used, is fully guaranteed, and has, where necessary, been thoroughly overhauled in our special department. Look through the columns below—that "expensive" camera you've longed for is here, at pounds below list price.

The New SIMPLICITY and Certainty

with which correct exposure can be ascertained with the New "Avo" Exposure Meter has won enthusiastic praise from professional and amateur photographers alike. It is the simplest and most dependable meter ever made. The quickest to use. A boon to all photographers, saving time, materials and opportunities.

MR. OLIVER G. PIKE, F.Z.S., F.R.P.S., M.B.O.U., *writes, "My film, 'Nursery Island,' owes the excellence of its exposures to your 'Avo' Meter .... My 'Avo' told me the right stop every time, and I cannot speak too highly of it."*

- Unique method of exposure indication.
- Extreme sensitivity. Gives exposures from 60 secs. to 1/2,000th of a sec.
- Fits vest pocket. Size only 2½ × 2½ × 1 in.
- Influenced solely by light received from normal picture angle.
- Can be held and operated in one hand without removal from leather case.

BRITISH MADE

Granville PRODUCTS PRODUCE BETTER PICTURES

Whether used by the novice, the advanced worker or the professional, GRANVILLE PRODUCTS ensure the maximum results with the minimum effort. Every day we receive testimonials from new customers who are surprised and delighted—surprised at the quality obtained at such a low price—delighted with the ease in which such perfect pictures are obtained. If you are just beginning, start right with " GRANVILLE " ; if you have years of experience, change to " GRANVILLE." You will never change again !

"THE GRANVILLE GUIDE"

This new publication is a **superb** 16-page de luxe illustrated edition. Specially issued for users of Granville Photographic Products, it contains up-to-date working instructions, formulæ, and many useful articles specially written by our own experts. A complete list of all materials is also given, including many new lines. If you have never communicated with us before, **write to-day for your copy.** Applications should be addressed to : PUBLISHING DEPARTMENT, Granville Gulliman & Co., Ltd., P.O. Box 3, Leamington Spa.

If you have previously communicated with us, please do not apply, as a copy will be sent to you.

There is an ILFORD PLATE for every occasion

Ilford Auto-Filter Plates, H. & D. 400, are ideal for capturing the delicacy of natural greens and yellows. They are by far the most popular amateur plate.

Ilford Special Rapid Panchromatic Plates, H. & D. 400, are of steeper gradation than the Soft Gradation Panchromatic Plates. They have great latitude and full colour-sensitivity, and are splendid all-round plates.

Ilford Soft Gradation Panchromatic Plates, H. & D. 700, give delightfully soft tones. They are fully colour-sensitive and reliable to the utmost degree.

TOPICS of the Week

AT the London Salon the last prints to be laid before the selection committee are being delivered to-day; at the R.P.S. the usual mass of entries has been under treatment for a fortnight. In a few days both exhibitions will throw open their doors, and this is a sort of signal for the opening of all sorts of photographic activities up and down the country for the "winter" season—a more lively and busy one than the "summer." New societies are springing up, new syllabuses are beginning to appear, and in many other directions there are unmistakable signs of vigorous photographic life and enthusiasm. The possibilities and interests of photography are greater and more numerous now than ever before, and the hobby is decidedly perennial instead of seasonal as it once was. Which is all to the good.

Cheerful Dark-rooms.

It makes us cheerful—as well as the dark-rooms—to read in a manual for radiographers which has just come our way a plea for brighter dark-rooms. The walls, it says, should not be painted black or red. Light and cheerful colours are preferable for psychological reasons, when, as happens among radiographers, so many hours of the day must perforce be spent in the dark-room. The ceiling may be painted light green if a green ceiling reflector safelight is used, or buff if red safelights are employed. The general illumination should be indirect. It is unfortunate that photography should have had such funereal associations. Every jest about the professional features his black cloth, and the idea which many people have of the amateur is of someone who belongs to his dark-room as much as the monk of old to his cell. Improvements in material, apparatus, and processes, as well as better knowledge of the science of illumination, have wrought some deliverance.

THE SHRIMPER.

A contre-jour study. This type of subject is always interesting.

Off the Main Line.

We wish some diligent compiler would make a volume about the achievements of the amateur, not in photography alone. We have just been reminded that even the great scientific activities of Sir Isaac Newton were strictly those of an amateur, and that his real business was that of director of the Royal Mint. William Gilbert, who established the magnetic nature of the earth, and was the father of modern experimental science, and gave the word "electricity" to the language, was in all these respects an amateur, his profession being that of court physician to Queen Elizabeth and James I. The greatest astronomers were, all of them, amateurs at the game. The difference between an amateur pursuit and a profession has been well put: You adopt a profession; a hobby adopts you. The choice of a profession means strain and thought, whereas one usually slips into a hobby. There has been some controversy whether it is better to have a hobby which bears indirectly on one's main work in life or one which is as far away from it as possible. It is a dispute which can never be settled. It depends entirely upon the individual, whether he has a one-way or a two-way mind.

When Something Turns Up.

One of the perennial delights of photography is the unexpected—the thing that turns up in the picture when you never knew it was there. Every photographer has had that experience, even the most

casual—or perhaps one should say, especially the most casual. You feel rather like the hen that has hatched out a duck's egg. Apparently even in the world of the painter such things are also possible, to judge from a story which Mr. E. V. Lucas, in one of his latest books, tells against himself. He describes how he was sitting for a portrait by Sir William Rothenstein in the latter's studio. There he sat through three afternoons while Rothenstein measured, recorded and talked. The talk was excellent, and the picture, when finished, was a perfect likeness of Beerbohm Tree! Dare we hint that photographers have similar surprises?

A Photographic Department de Luxe.

The new Anatomy Building of St. Bartholomew's Hospital in Charterhouse Square has a photographic department calculated to excite envy even among those least addicted to that vice. It is really one of the finest departments we have ever seen, and, to use a hackneyed phrase, no expense has been spared in its furnishing and equipment. There was a time when it was thought, especially in colleges and such places, that because photographic operations had in part to be carried out in darkness, therefore subterranean quarters, cramped surroundings, and primitive conditions generally would serve the photographer. In this new department the photographer has an opportunity to breathe, and he has everything to his hand. The enlarger alone, we believe, has cost some £120, and the photomicrographic apparatus about £300. Another feature of the Anatomy Department is the museum, which is divided into bays, each bay devoted to a special subject in medicine, and in addition to the specimens on the shelves, there are on the walls of each bay photographs, photomicrographs, and X-ray films further illustrating the subject—an idea which might be more pursued in museums in general.

"The Amateur Photographer" EXPOSURE TABLE—*September*

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured, or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m. double these exposures. From 6 to 8 a.m. or from 4 to 6 p.m., treble them.

N.B.—The times given above are by "sun time." The exposures, therefore, which are laid down as suitable for 2 to 4 p.m., for instance, will be those to be given between 3 and 5 p.m., by the clock, during "summer time."

Subject.	Ordinary.	Medium.	Rapid.	Extra Rapid.	Ultra Rapid.
Open seascapes and cloud studies	1/25 sec.	1/40 sec.	1/75 sec.	1/100 sec.	1/120 sec.
Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes ..	1/15 ,,	1/25 ,,	1/45 ,,	1/60 ,,	1/75 ,,
Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes	1/8 ,,	1/12 ,,	1/25 ,,	1/30 ,,	1/40 ,,
Landscapes in fog or mist, or with strong foreground, well-lighted street scenes ..	1/5 ,,	1/10 ,,	1/20 ,,	1/25 ,,	1/30 ,,
Buildings or trees occupying greater portion of pictures, river scenes with heavy foliage	1/3 ,,	1/4 ,,	1/8 ,,	1/12 ,,	1/15 ,,
Portraits or groups taken out of doors, not too much shut in by buildings	1½ ,,	1 ,,	2/3 ,,	1/3 ,,	1/4 ,,
Portraits in well-lighted room, light surroundings, big window, white reflector ..	5 secs.	4 secs.	2 secs.	1½ ,,	1 ,,

As a further guide we append a list of some of the best-known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Fog, Scratches and Spots

In these days when small negatives are made intended for enlargement, it is most necessary that they should be free from defects. This article deals with some common faults, and shows how to trace the causes.

IT is very important for the modern photographer to do all in his power to prevent the possibility of scratches, spots, or any similar defects in his negatives. This is the case because most workers in these days use small, or "miniature," sizes, and the slightest imperfection renders the negative useless for its purpose.

The first step is to ascertain the cause of the defect in order that it may be prevented in future. This should always be done, whether the negative affected is a valuable one or not.

This is one of the most common causes of defects in negatives and one of the most difficult to trace, as to cause, and especially in the case of a film camera. The fog may be general, or confined to patches; it may appear upon some negatives, and not in others.

If there are fogged areas at the edges of the film at the top or bottom, it may be caused by a badly fitting back on the camera. Sometimes, however, the cause is a thin place in the bellows, or light may "creep in" between the blades of the shutter.

A simple way of finding out exactly where light enters is to take the camera into the dark-room and to cut a sheet of rapid bromide paper so that it fits into the back of the instrument. The bromide paper is backed with a piece of black paper from a discarded film, and the camera closed in the usual way. It is then exposed to light action, preferably out of doors, for several hours. The bromide paper, when removed, is developed and fixed, and will generally indicate where the light enters. It may be a simple matter to repair, or the instrument may be sent to a trade house specialising in this work.

There are many possible causes of scratched negatives. In the case of plates the scratches may be caused by rubbing the surfaces of two plates together, when removing from the packing. Scratched negatives will also result if the draw-out shutter of the dark-slide is bent, or dented, and touches the film in passing. This kind of scratch is of the "telegraph wire" type, similar to that found upon roll films.

It must be realised that in the case of small plate-holders there is a very little clearance between the film of the plate and the shutter.

The roll-film user needs to be especially careful to avoid the several causes of scratched negatives. These are more rare than was formerly the case, through the fact that most manufacturers give the film a coat of protective varnish which acts as an effective preventive.

The familiar "telegraph line" scratches, which run across the film in the direction that the film travels through the camera, are generally the result of some roughness on the surface over which the film runs. It may be due to the rollers being too tight, or the pressure plate exercising its function too strongly.

Care must be taken not to wind the film with the camera closed, there being so little clearance between the film surface and the bellows that there is risk of scratching the film.

Another point that needs attention is that the camera must be free from dust, or grit; the latter, especially, if coming into contact with the film while the latter is being wound, or under pressure, will certainly cause scratched negatives. This is very important when loading the camera upon a sandy beach, and especially if wind is blowing.

Provided that it is properly threaded, the well-designed camera will permit the film to be wound with sufficient tightness to prevent light from entering. Some photographers, when removing the spool after exposure, twist the spool to tighten it with a view to preventing the admission of light. This practice is to be deprecated, for not only is it unnecessary, but it is a very fruitful cause of scratches.

Film-pack negatives should be free from scratches, provided that the draw-out shutter of the adapter is smooth, and free from indentations.

Apart from pin-holes, which are caused by dust inside the camera, or by dust deposited upon the plates during loading, spots upon negatives arise from several causes, and some of these are very difficult to detect.

A very common defect is the white clear spot, due to air-bells upon the film during development, which prevent the solution from reaching the emulsion. Care in working, swabbing the surface of the plate or film during development will prevent these, as will the use of water that has been boiled and allowed to cool for making up solutions.

Photographers are occasionally puzzled as to the cause of black spots, or comet-like markings, of irregular form. These are the result, in most cases, of lack of care in working. They may be caused by chemical dirt in the form of small particles of developer such as amidol, that have been spilt and not properly wiped up. These, finding their way to sensitive material, cause black spots.

The same can be caused by the use of solutions which contain undissolved chemicals, or by shaking up a developer that has a precipitate thrown down after storage. Irregular markings, mottling over the negative, are due to insufficient agitation of the developer in tank or dish.

These defects are obviously due to lack of care, and the photographer should regard them as warnings, and be thankful if they appear upon unimportant negatives.

SHADOWS for their own SAKE

By S. ALTSON PEARL.

COMING events, it is said, cast their shadows before. Before what, the proverb does not bother to mention; but certainly not before the lenses of our cameras. I, at least, have never had the privilege of photographing either a coming event or its shadow; nor have I heard of any brother photographer who has experienced this psychic thrill.

On the other hand, many completely material objects throw shadows which are not only as real as anything this side of relativity can be, but which provide excellent subjects for our cameras. Shadows of a kind can, of course, be found in very nearly every photograph taken, but as a rule, although they may be quite strong in intensity, as in the average scene

Steel Shadows.

lit by sunshine or strong artificial light, they play quite a subordinate part in the composition.

Shadows for their own sake are, however, what I am advocating; photographs in which strong, well-defined shadows are the chief part of the composition. Of course, there is nothing at all new in the idea of snapping interesting shadows; there must be few possessors of cameras who have not done it at some time or other; but I think even fewer make a habit of consciously looking for interesting shadow effects.

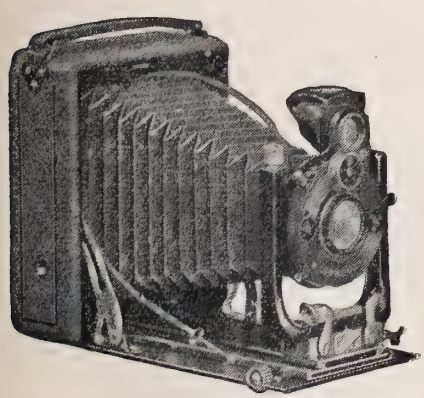
To those who intend to follow my advice in this matter, a further word. Do your shadow-seeking for the most part when the sun is fairly low in the sky, that is, when shadows are at their longest and best—and remember that very few shadows are to be found at or near eye-level; the most attractive "patterns" are generally to be seen on the ground beneath your feet, or on vertical surfaces above your head.

For instance, the illustration "The Spire," showing the shadow of a church spire spread over the surrounding streets and gardens, represents about the most strenuous piece of

5 p.m.

photography I have ever attempted, necessitating an adventurous climb up 150 feet of steeplejack's ladder to the top of the spire. I must admit that I would never have accomplished it without the constant encouragement of one of the 'jacks; the worthy fellow followed me up all the way, encouraging me with light jest and quip, whenever, as frequently happened, my spirits showed sign of failing. The shadows of both of us are visible as small "bumps" just below and to the left of the spire's tip.

"5 p.m." was obtained at the cost of some slight discomfort, though not the faintest risk, by leaning as far out as possible over the parapet of a vertical embankment. On the other hand the other illustration did not call for any acrobatics whatever, beyond those involved in pointing the camera up.



Having, then, found your shadow subject, the rest is simple. To emphasise the shadows, it is as well to give a trifle less exposure, and an equally small amount more development of the negative, than normal; in other words, aim to produce a negative of fairly strong contrast, but do not overdo it.

The Spire.

SHOP-SOILED NEW CAMERAS

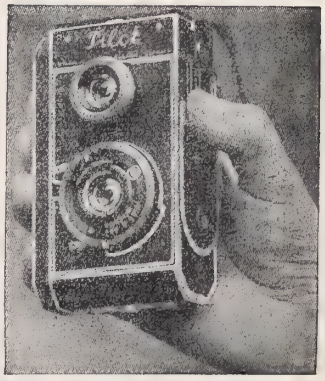
At Greatly Reduced Prices

ZEISS LENS CAMERA FOR $4\frac{1}{4} \times 3\frac{1}{4}$ PLATES or FILMPACKS

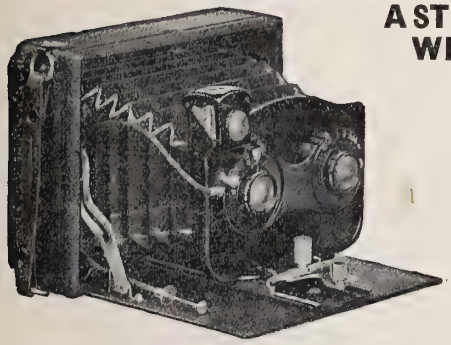
The camera has full double extension, vertical and horizontal rising front, large brilliant reversible view-finder, focussing screen fitted with hood, Carl Zeiss f/6.3 Triotar anastigmat lens, 13-cm. focus, in Compur shutter, speeds 1 to 1/250th sec., with cable release, including 2 plate-holders.

CASH PRICE **£4 : 12 : 6**

"PILOT" Miniature Reflex



For 16 exposures on V.P. Roll Film of any make.

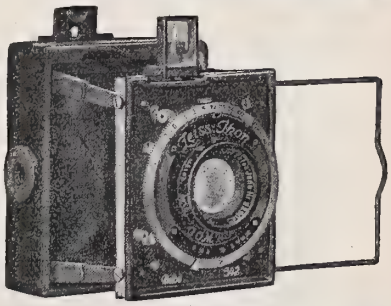


At the touch of a button the Pilot opens to "infinity" position, the hood springs into place and the camera is ready for use. A simple lever movement changes the film.

Magnifier over ground-glass screen for ultra-sharp focussing. Additional finder for upright eye-level pictures.

With f/3.5 Zeiss Tessar lens and Compur shutter, 1 to 1/300th sec. **CASH PRICE** **£14 : 0 : 0**

With f/2.8 Zeiss Tessar lens **CASH PRICE** **£16 : 15 : 0**



A STEREO CAMERA WITH VIEWER

Special clearance offer of Folding Stereoscopic Cameras fitted with special f/8 Aplanat lenses in Automat shutter, speeds 1/25th, 1/50th and 1/100th sec., also B. and T., with trigger and cable release, brilliant view-finder, lever focussing, focussing screen fitted with hood, as listed at £5 5s. Including three 9×12 cm. plate-holders or 9×12 cm. film-pack holder, with Camerascope stereo viewer.

CASH PRICE **£2:5:0**

ZEISS IKON BÉBÉ CAMERA

An exceptional opportunity to obtain a high-grade camera fitted with **Carl Zeiss f/4.5 Tessar** lens, in **D.A. Compur** shutter, complete with 6 plate-holders and leather case. The Bébé camera is exceedingly rigid. Focussing to 6 ft. by means of lens mount. Size 6.5×9 cm. ($3\frac{1}{2} \times 2\frac{1}{2}$ in.). Light and compact. New and unused. List price £23 12s. 6d.

CASH PRICE **£9 : 17 : 6**

VOIGTLANDER "VAG" PLATE CAMERAS

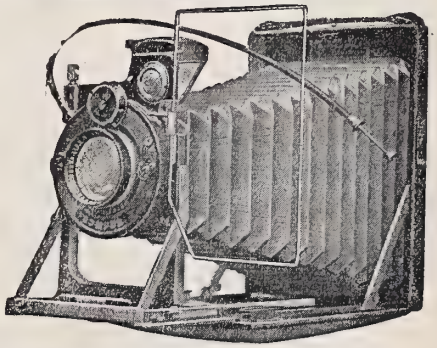
These are brand new cameras as received from the manufacturer. These models having been discontinued, we are offering them at 25 per cent below the maker's list price to clear.

$3\frac{1}{2} \times 2\frac{1}{2}$ **Voigtar** f/6.3 Voigtar anastigmat lens, 3 single plate-holders, 3-speed Embezet shutter. List price £4 18s. Cash price..... **£3 13 6**

$3\frac{1}{2} \times 2\frac{1}{2}$ **Voigtar,** f/6.3 Voigtar anastigmat lens, 3-speed delayed-action Embezet shutter, 3 single plate-holders. List price £5 8s. 9d. Cash price..... **£4 0 0**

$3\frac{1}{2} \times 2\frac{1}{2}$ **Voigtar,** f/6.3 Voigtar anastigmat lens, Ibsor shutter, speeds 1 to 1/125th sec., 3 single plate-holders. List price £6 6s. Cash price..... **£4 15 0**

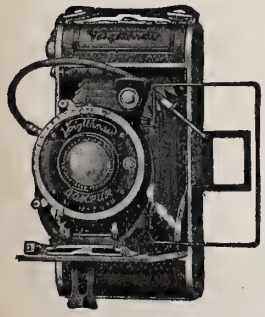
$3\frac{1}{2} \times 2\frac{1}{2}$ **Voigtar,** f/4.5 Skopar anastigmat lens, in Ibsor shutter, speeds 1 to 1/125th sec., 3 single plate-holders. List price £7 10s. Cash price..... **£5 12 6**



$4\frac{1}{2} \times 3\frac{1}{4}$ **Voigtar,** f/6.3 Voigtar anastigmat lens, 3-speed Embezet shutter, 3 single plate-holders. List price £5 11s. Cash price..... **£4 3 6**

$4\frac{1}{2} \times 3\frac{1}{4}$ **Voigtar,** f/6.3 Voigtar anastigmat lens, Ibsor shutter, speeds 1 to 1/125th sec., 3 single plate-holders. List price £6 16s. Cash price..... **£5 2 6**

$4\frac{1}{2} \times 3\frac{1}{4}$ **Voigtar,** f/4.5 Skopar anastigmat lens, Ibsor shutter, speeds 1 to 1/125th sec., 3 plate-holders. List price £8 7s. 6d. Cash price..... **£6 5 0**

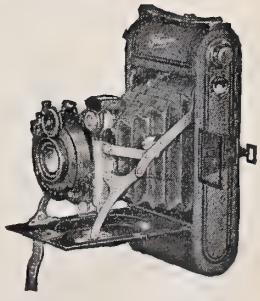


"PATENT ETUI" CAMERA

9×12 cm. or $4\frac{1}{2} \times 3\frac{1}{4}$ in.

Carl Zeiss f/6.3 anastigmat lens, in Compur shutter, speeds 1 to 1/250th sec., including cable release, rack and pinion focussing movement, micrometer screw rising front, brilliant view-finder with spirit level attached, also wire frame finder, focussing screen fitted with hood, film-pack holder for 9×12 cm. film packs (3 plate-holders for 9×12 cm. plates will be supplied in lieu of the film-pack holder if preferred). Adapter for $4\frac{1}{2} \times 3\frac{1}{4}$ plates or film packs included.

CASH PRICE **£4: 12: 6**



VOIGTLANDER "INOS" Roll-film Cameras

De luxe quality $2\frac{1}{4} \times 3\frac{1}{4}$ Roll Film Cameras for 8 or 16 exposures. Automatic self-erecting front, unique focussing device independent of lens mount, new and unused, with Heliar f/4.5 anastigmat lens, in D.A. shutter, speeds 1/25th, 1/50th, 1/100th of a second. **Cash Price** **£4 18 6**

Ditto, with Heliar f/4.5 lens, in D.A. Compur shutter, speeds 1 to 1/250th sec. **Cash Price**..... **£9 18 6**

IHAGEE "ULTRIX" ROLL-FILM CAMERAS

Self-erecting front. Takes standard size $3\frac{1}{4} \times 2\frac{1}{4}$ films, 8 exposures. Brilliant and wire-frame finders, f/4.5 Ihagee anastigmat lens, delayed-action Compur shutter, speeded 1 to 1/250th sec., T., B., with shutter release.

CASH PRICE..... **£4:18:6**

For Roll Films or Plates. Self-erecting front, f/6.3 Ihagee anastigmat lens, 3-speed shutter, brilliant reversible view-finder, plate back, with hooded focussing screen, 3 single plate-holders.

CASH PRICE..... **£3:18:6**

Extra for Leather Case, 6/6.

THESE CAMERAS ARE OFFERED FOR CASH ONLY

SANDS HUNTER & CO., LTD.

37, BEDFORD STREET, STRAND, LONDON, W.C.2

A new conception in MINIATURE CAMERA DESIGN has been established with the

CONTAX II. A combined distance meter and view-finder has for a long time been desired by all 24×36 mm. workers. And now for the first time, this facility, together with many other unique refinements, is offered in the new 1936 model of Contax II. This combination not only ensures speedy manipulation, but enables focussing to be performed while paying full attention to the composition of the picture in the view-finder.

CONTAX II

For want of a more suitable expression, the Contax II may be described as a de Luxe precision miniature camera, and in addition to the already well-known features of the Contax I, it provides :—

- Distance meter and view-finder combined in one aperture.
- Shutter speeded to real 1/1,250th second—fast enough for close-up rapid sports work.
- The whole range of shutter speeds always visible—all controls are conveniently located on top of the camera.
- If any improvement could be made to the shape of the Contax I this has been effected in the Contax II, the elegant die-cast metal body is finished in chromium plate, and the picture number indicator is built in.
- For the first time in a miniature camera, a built-in delayed-action release is provided.

All enthusiastic miniaturists anxious to keep their photography up to the minute, will be interested in the Contax II. Full particulars, together with name of nearest stockist, free on request.

IMPORTANT
All Zeiss Ikon Cameras sold by us in Great Britain are equipped with distance and depth-of-focus scales in English feet. Also diaphragm scales are engraved according to the R.P.S. standard.

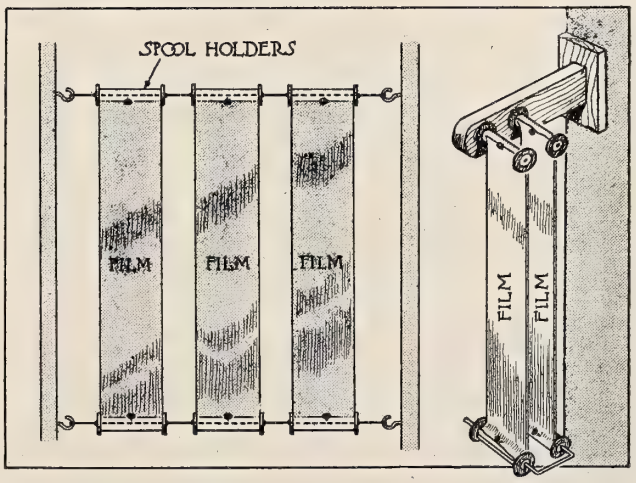
ZEISS IKON LTD., 11, Mortimer House, Mortimer Street, London, W.1

Readers' Hints, Tips and Gadgets



A NEW USE FOR ROLL-FILM SPOOL-HOLDERS.

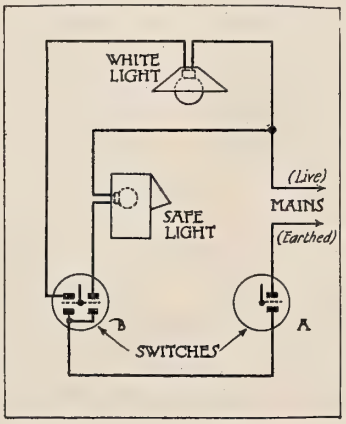
THE empty spool-holders of the wooden type that are usually thrown away when the films have been developed can be put to further use for drying the films.

Take a number of these spools and clear out the central bore with a skewer or drill so that they can be run easily on string. As will be seen in the illustration, any number of these spools can then be threaded on string to accommodate the roll films to be dried. The top of the film is pinned to the wooden spindle. At the bottom of each film a further spool is pinned and it will be found convenient to thread these spools in a similar fashion to those above. In this way, each film is secured taut for drying purposes and is also prevented from blowing about, and possibly injuring the next one to it. The surplus water can also be removed more readily.

Where space is restricted, the spools can be put closer together as suggested in the right-hand sketch and the total number supported on a wooden bracket fixed to the wall out of the way. As before, a spool-holder can be pinned to the bottom of each film, and, if necessary, the centres can be wired together to keep them perfectly still. If this method is used, allow as much space as possible between the films in order to hasten drying.

R. H. COLLINS.

FOOLPROOF LIGHTING FOR THE DARK-ROOM.



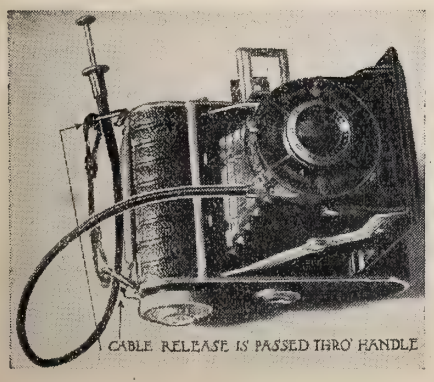
HAVING had the white light accidentally switched on for me while I was developing out some bromides under the safelight, I set out to devise a foolproof lighting circuit that would prevent any similar catastrophe in the future.

The following device is both practical and simple enough for any amateur to do, although it is as well to get an electrician to do it if in doubt.

In the diagram, the safelight and the white light are shown with A and B, the two switches (both left in open circuit) that work these lights.

When the switch A is switched on on first entering the room the white light only appears, the safelight being still out. When, however, the switch B is switched on, the white light is automatically extinguished, and the room is illuminated only by the safelight.

This arrangement makes it impossible to switch on the white light before having first extinguished the safelight, and this action of putting out the safelight acts as a reminder, to check and assure oneself of any sensitive material left exposed before the white light is put on. Only one of the lights can appear at the same time, and the white light can be only extinguished finally at the door, when leaving the room.



The wiring of the arrangement is perfectly straightforward—A is a double-pole, one-way switch, and B is a double-pole, two-way change-over switch. Note that both the switches are in the earthed lead of the mains supply.

The working details are as follows: The switch A is closed on entering the room, and the white light appears. When work is to commence, the switch B is moved, and the safelight comes on, automatically extinguishing the white light. The white light will appear again only when the safelight is extinguished. Should the switch A be touched when the safelight is on, the room will be in total darkness.

Apart from the safety given by this arrangement in safeguarding the accidental fogging of sensitive material, the saving in electric current, when reckoned over a period, and by the safelight not being in use when the white light is on, is quite appreciable.

D. ALDWYN JAMES.

A SIMPLE WAY OF AVOIDING CAMERA-SHAKE.

A COMMON cause of camera-shake when using a small instrument, fitted with a diaphragm shutter, at eye-level is the fact that the body of the camera is held firmly by one hand only, the other hand being partly occupied in manipulating the shutter release. To hold the camera firmly with both hands it is advisable that the release should be on the camera body itself, so that it can be operated with one finger only. This can be arranged as illustrated.

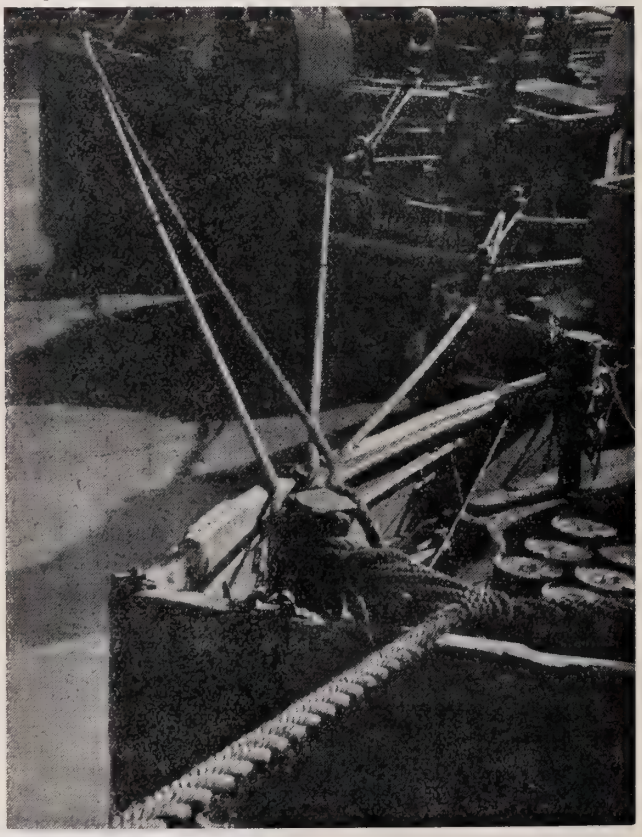
A cable release of greater length than normal is used (9 in. is a good size) and is passed through the supports of the carrying-handle before being screwed into the shutter mount. The camera may then be held firmly against the face, and a slight movement of the forefinger is sufficient to release the shutter. In the illustration the end of the cable release is shown some distance away from the camera for the sake of clearness; in use the part normally held between the fingers is prevented from moving by the carrying-handle support, against which it rests. Using this method, it has been found possible to give exposures of 1/5th second without camera-shake being apparent in the negative.

S. R. PITMAN.

Holiday Pho

By DONALD G. SHELDON.

When you go away for holidays you probably take a selection from your lighter apparatus and trust to luck. At home you can have it all to go at, choosing the articles most likely to be required on each outing. What is more important still, you can develop each day's "bag" as you get it, without any of the difficulties encountered when away from home. Then, if you find you have spoilt a picture, you may still have the chance of taking it again. This is more satisfactory



In the station entrance.

ALTHOUGH the railway and bus companies, using Press announcement, illustrated circular and pictorial poster, exhort us at all times of the year to explore the beauties of Britain instead of going abroad, why not spend at least a part of your holidays in your own town or district?

If you are a slave of routine, going to work by the same route at the same hour, visiting the same parts of your town with monotonous regularity day after day, try this idea. Set off one day on the old familiar route, but at a different hour. You will be astonished at the number of things you hadn't noticed before. The people you meet are different; buildings and vistas are transformed by the change in the angle of the lighting. When you see these familiar sights in new guise, your camera should have a busy time. Moreover, you'll have time to loiter now; time to wait for suitable figures or groupings in your scene; time to seek fresh viewpoints.

Have you noticed that when you visit another town you can usually find something good to take? You go in an enquiring mood, expecting to find pictures — and you do. Well, your home town has got subjects worthy of your attention also, and if you adopt the "visitor attitude" you will come across all sorts of things that you had missed before.

A dock corner.

A riverside snap.

than arriving from abroad to find that you have made some fatal error and cannot repeat the exposures.

While you are about it, you should explore any parts of the town where you don't often go. Try all those side alleys; poke your nose into old yards. Inspect road repairs and building operations—the British workman on the job makes a good model. Look in at the railway station and the goods yard. If your town has a river or docks the waterside will bristle with opportunities for picture-making. Don't neglect the market; you will probably find here more subjects than you have films for.

A word about your methods

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

tographs at Home

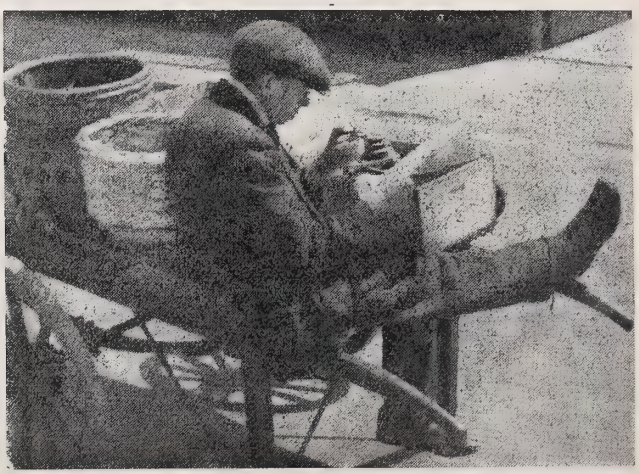
when seeking subjects including groups of people or single figures. If you wish to get pictures without camera-conscious models, your apparatus should not be too conspicuous. It is no use expecting to rig up tripods in the market-place.

I find it best to prowl about with a small camera, focussed at fifteen feet,

The morning promenade.

Yacht racing in the Park.

with the lens-hood on and shutter set. This preparation often gets me pictures before my victims are aware of my presence, and at that distance the perspective is good. To have to grope in pocket or case for your camera and get it ready after you have found your subject, is to ask for disappointment in this class of work.



If the weather should be unkind, visit your local churches and museums. These will probably reveal many interesting subjects which are new to you. Permission to photograph is usually readily granted by the vicar or curator, provided that you do not intend to use flashlight. Here you will find subjects and lighting to test your skill to the utmost. If you are unsuccessful you can gain information from your failures and try again with more hope of success.

Do not forget that your town looks very different after dark, and that one or two evenings should be reserved for night photography. Fast panchromatic materials have brought this within the scope of almost any camera, so if you haven't done any before, begin now. Whether you can take night "snapshots" including figures will depend on your lens and the brilliance of the lighting; street scenes without figures can be done with any camera whose shutter will give a time exposure.

Finally, as a contrast, try the parks. Here you will be alert for snapshots of children playing games, fishing for tiddlers, or feeding the ever-popular swans on the lake. The drinking fountain, tennis courts and bowling greens, children's paddling pool, and refreshment booths are all good places to watch. If you still have any plates or films left after haunting these regions for an hour, you had perhaps better ignore this article and go abroad for your holiday after all.

The accompanying illustrations are not supposed to be pictures of exhibition standard. I took them on my own home holiday, and I put them in to let you see that I have practised what I preach.

What is that? You have already been away for your holiday? Well, the best of the sort of holiday I am suggesting is that it may be seized at any time, even if only for an hour or so.

A Prize Competition for Novices

THIS competition is specially for those readers of "The A.P." who are Novices; that is to say, amateur photographers who have never won an award of any description in a photographic competition, and preferably those who are only just starting photography.

The prizes will be awarded for the best snapshots of subjects that the beginner usually attempts. These include snapshots of the family, groups, or single figures taken at home or on holiday, either indoors or outdoors, and landscape and beach scenes, etc., with figures. The arrangement of the subject and the pose of the figure or groups is a matter left entirely to the discretion of the competitor.

The entries will be restricted to contact prints. These may be mounted if preferred, and the smallness of any print will not affect its careful consideration in this competition. The rules are very simple, but should be read carefully.

Our readers who are Novices still have time in which to make their prints for this competition, and the prizes are worth having.

THE PRIZES.

The prizes in this competition will consist of supplies of roll film or plates (for those winners who happen to use a plate camera), as follows:—

The First Prize will be TWO ROLL FILMS EVERY WEEK FOR ONE YEAR.
The Second Prize will be TWO ROLL FILMS EVERY WEEK FOR SIX MONTHS.
The Third Prize will be ONE ROLL FILM EVERY WEEK FOR SIX MONTHS.
Twelve Prizes of ONE ROLL FILM EVERY WEEK FOR THREE MONTHS.

The winners of these prizes will thus be encouraged to continue their photographic activities throughout the year with a supply of free film.

RULES.

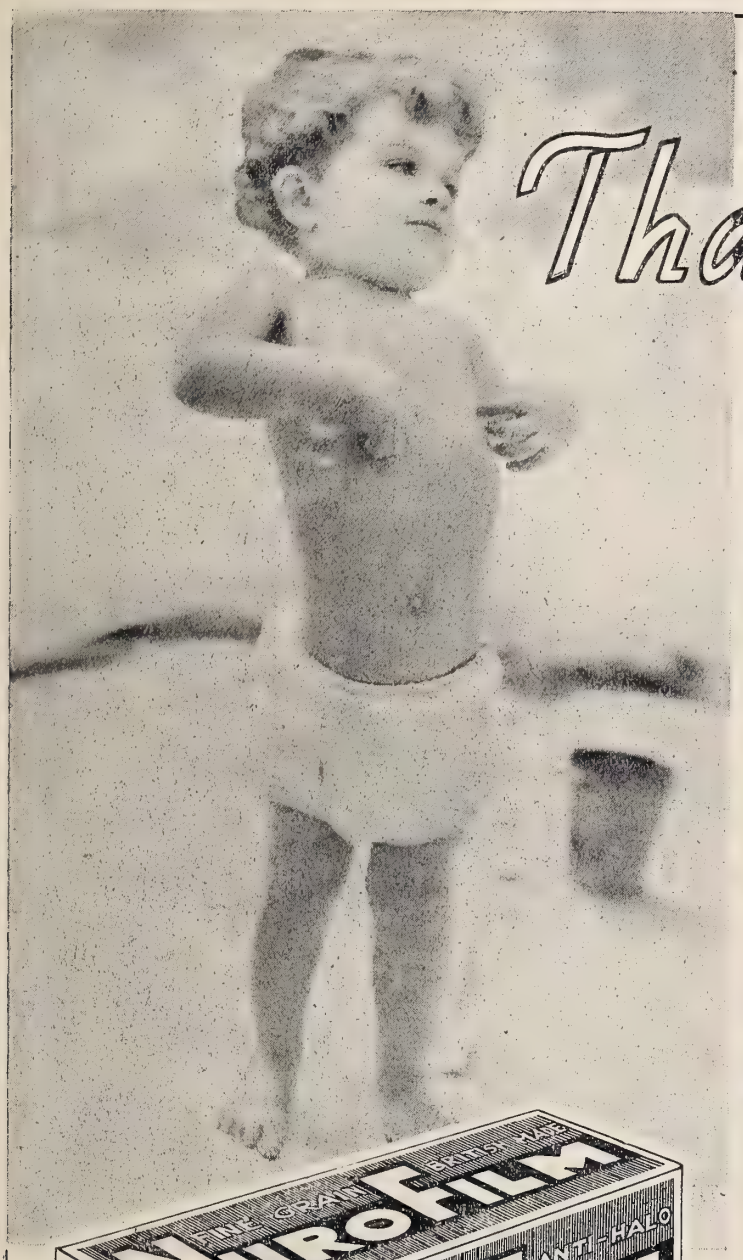
Each print must have affixed firmly to the back a coupon which will be found in our advertisement pages each week. This must contain title of print, and name and address of competitor.

The latest date for receiving entries is September 30th.

The decision of the Editor in all matters relating to this competition must be accepted as final.

All entries must be addressed as follows: The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the outside of the envelope or package must be clearly marked "Novices" Competition.

CAN THE CAMERA LIE?—A New Competition



IN the Summer Number of *The Amateur Photographer*, published on July 22nd, a new competition was announced in connection with articles that appeared in that issue dealing with "pictorial inexactitudes." It was demonstrated that by judicious application of the camera, combined with unusual viewpoints, or by double exposures, results were obtained that on their face value appeared to be unreliable.

In this competition, prizes are offered for the best photographic "untruth," but the prints must be quite straight and from untouched negatives. Combination prints, or prints that have been built up by cutting out other photographs and copying, or prints that have been obtained by various "control" methods, are not eligible for this competition.

The prizes are **5 guineas, 3 guineas, 2 guineas, 1 guinea** and **10s. 6d.** They will be awarded for what are considered to be the best efforts in making the camera "untruthful." The negatives of the winning prints and of any others must be submitted for inspection if required. Technical data should also be given regarding the production of the photographs.

There are no other conditions beyond those mentioned above. A special competition coupon, which appears each week in the advertisement pages, must be affixed to the back of each print. The closing date will be September 30th.

Entries should be addressed to the Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and should be marked on the envelope, "Special Competition."

That's fine!

SNAPS ON NURO FILM are always finer.... it is the FASTEST FILM YET

Obtainable through all branches of Boots The Chemists, Timothy Whites & Taylors, Taylors Dispensing Chemists, and from all progressive dealers. *STANDARD SIZES AND PRICES*

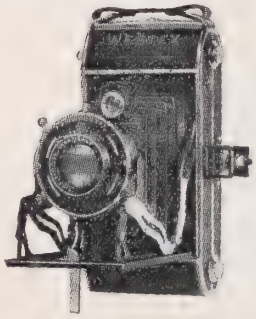
What is "The WESTMINSTER"?

"The Westminster" is a group of four highly specialised shops, each in itself complete as a large-scale store devoted to "Everything Photographic—Ciné and 'Still'." At each and all you will find a homely, sociable atmosphere, in which all amateur photographers and home ciné enthusiasts may satisfy their needs, and obtain freely just the information and advice that they require. You can always buy "Out of Income" on specially favourable conditions, and Exchange your present camera for another on the most advantageous terms—at "The Westminster."

'SIXTUS' Photo-Electric Exposure Meter for LEICA



Four times as sensitive as earlier models. Direct readings even in dark interiors. Most compact, with protective case securely fixed. Held by one finger. Measures only 2¼ × 2 × 1 in. Complete in case.

£5 : 5 : 0

Nine monthly payments of 12/3.

INCOMPARABLE "WESTEX" Roll Film Cameras

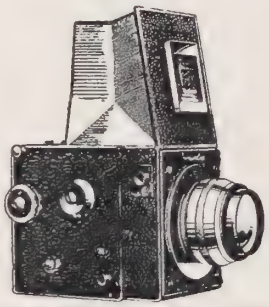
● STILL QUITE UNBEATABLE

"WESTEX Four-Five"

8 or 16 on normal 3¼ × 2¼ film. Very highest quality in every detail. Superb f/4.5 anastigmat, giving exceptionally fine definition, in focussing mount, delayed-action Prontor II shutter, 1 to 1/150th sec., T. and B. Sturdy all-metal body, plated edges, best leather covering and bellows. Quick self-erecting front. Optical direct-vision and brilliant waist-level finders. Hinged easy-loading back, panchromatic safety windows. Easy and delightful to handle, yet suitable for the most advanced work anywhere. By far the best all-round value offered. Obtainable only at the Westminster..... £4 : 8 : 9

Nine monthly payments of 10/5.

Velvet-lined Leather Case, 6/9 extra.



"WESTEX Junior"

Takes 8 pictures 3¼ × 2¼ on standard film. Fine f/6.3 anastigmat in focussing mount. Self-erecting front, ready at a touch, direct-vision and brilliant finders. Quite unparalleled at its price 42/6

Nine monthly payments of 5/3.

● BENTZIN "PRIMARFLEX"

Compact and Versatile Reflex.

Takes 12 pictures 2¼ × 2¼ in. on standard 3¼ × 2¼ roll films; also 4½ × 6 cm. plates.

SPECIAL FEATURES:

One revolution of winding-head automatically and simultaneously performs four functions—i.e., winds shutter, sets mirror, operates film counter, winds film.

Self-capping focal-plane shutter, 1 to 1/1,000th sec., T. and B., deep focussing hood with magnifier, additional direct-vision finder, interchangeable lens mount.

With 10-cm. f/2.8 Meyer Trioplan anastigmat ..... **£31 : 10 : 0**

Nine monthly payments of 73/6.

Plate-holders, each.....7s. 6d.

Other prices on request.

FILMAREX VERTICAL ENLARGER DE LUXE

F/4.5 anastigmat, one hand lever rise and fall, with automatic locking, in three models for negatives up to 4 × 4 cm., 6 × 6 cm. and 3¼ × 2¼.

Model I, 4 × 4 cm., enlarges 2 to 10 times linear. Complete with condenser

£9:13:6

Nine monthly payments of 22/7.

Model 2, 6 × 6 cm. Complete with condenser **£11:8:6**

Nine monthly payments of 26/8.

Model 3, 3¼ × 2¼ ..... **£15 : 15 : 0**

Nine monthly payments of 36/9.

● GET IT AT THE WESTMINSTER YOU CANNOT DO BETTER . . . . .

NEW DOLLINA

(Coupled Range - finder)

This popular miniature is now fitted with most efficient coupled range-finder. Takes 36 on standard 35-mm. film. Safety winding prevents double exposures. Focussing can be set with camera closed. All-metal leather covered.

F/2.9 Radionar, Compur Rapid, 1/500th.

£14:12:6

Nine monthly payments of 34/2.

F/2.8 Tessar

£18:18:0

Nine monthly payments of 44/1.

F/2 Xenon

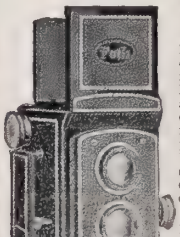
£19:19:0

Nine monthly payments of 46/7.

THE LATEST ROLLEICORD

With its notable improvements the New Rolleicord becomes a real "Camera-de-Luxe," despite its economical price. Film wind is now automatic; overlapping of exposures impossible. New type hood and larger magnifier, and new ultra-efficient eye-level focussing arrangements. Focussing knob combines depth-of-focus indicator, and engraved exposure scales are provided. Both f/4.5 and f/3.5 models take all Rolleiflex accessories (angle mirror only excepted). Both models, too, are leather covered.

Zeiss Triotar f/4.5 and Compur shutter to 1/300th sec., T. and B. **£14 : 10 : 0**



Nine monthly payments of 33/10.

Zeiss Triotar f/3.5, ditto **£17 : 10 : 0**

Nine monthly payments of 38/6.

Ever-ready Case, £1 0 0.

ASTONISHING VALUE

FOTH FLEX TWIN LENS

12 pictures 2¼ × 2¼ on normal 3¼ × 2¼ film. With f/2.5 Foth anastigmat, automatic film counter, focussing magnifier, focal-plane shutter, 1/25th to 1/500th sec. and Time, with delayed action. Price only **£13:10:0**

Nine monthly payments of 29/4.

Also with f/3.5 Foth anastigmat, as above at .. **£10:7:6**

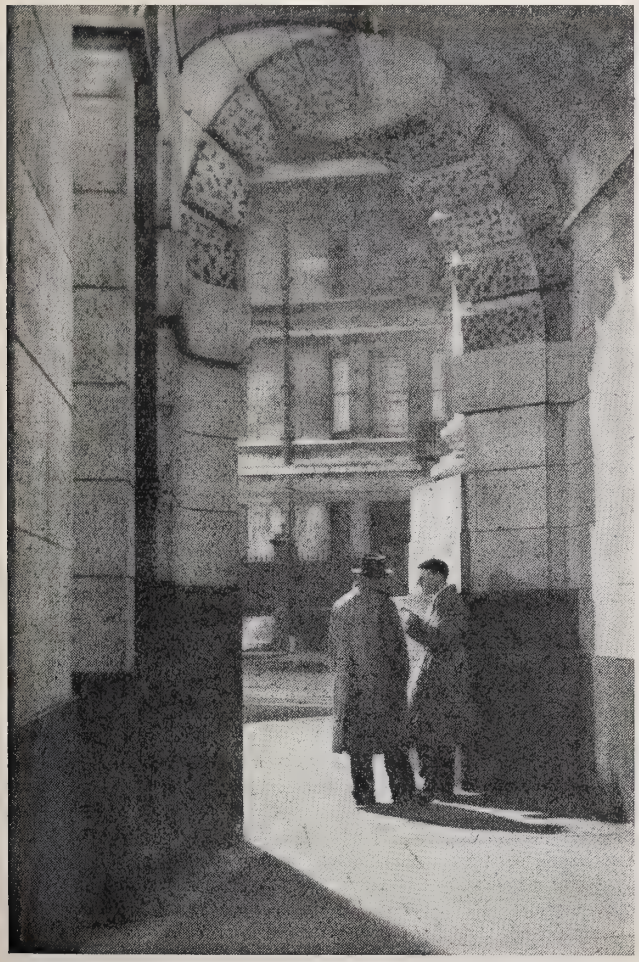
THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES



Methods and Ideals of well-known Pictorial Workers.

No. CCCXLIX.

Mr. A. PITMAN.

From information communicated to our Special Representative.

"MY aim in photography is to record impressions, and not to follow slavishly the works of far better exponents and technicians than myself. I believe that photography should be the visible expression of the individual, and for that reason I wonder why so many photographers appear to look at a subject, not with a view to reproducing their own impressions, but rather as though they wonder whether the result will be a compositional success.

GOSSIPS. *A. Pitman.*

"Most of my present work is done with a Rolleicord camera, a very versatile instrument, and one which has the additional advantage of allowing the photographer to view his subject while the exposure is being made. Also always in my pocket is an Ikonta, which is my constant companion; so much so that when I am without it I do not feel fully dressed. My cameras will not, of course, tackle every job—few could; but within the limits of any camera the results depend entirely on the operator. The man behind the camera is the dominating factor, not the camera itself.

"As to negative material, I use Panatomic film almost exclusively for ordinary subjects, relying on Ilford Hypersensitive for night work. I expose fully, to such an extent as to render development, in D76, fully complete in three minutes. Short development is essential to minimise the incidence of grain, a very important point to consider if big enlargements are contemplated. I do not use a tank, preferring the old-fashioned see-saw method, mainly, I think, because I do like to see the subject grow under my hand, as it were.

"I like a negative which, while not too dense, is of sufficiently robust quality to permit of printing on a normal grade of paper. After development and fixing, the film is washed for at least one hour, is then given a rinse in a dilute acetic acid bath, receives a final wash in running water, and is then wiped off with a soft pad of chamois leather which has previously been damped.

"My enlarger (home-made) is of the condenser type, fitted with an Ensar f/4.5 lens of 100-mm. focus. Most prints are perfectly straight, but when necessary I have no objection to local control while enlarging, and will even descend to doctoring a print subsequently if improvement is gained thereby. Various makes of paper have been tried from time to time, but now I use nothing other than Gevaert or Barnet bromide, both of which give, as far as I am concerned, as full a tonal range as is needed. I keep at hand a packet of half-plate paper of cheaper quality on which I make test prints.

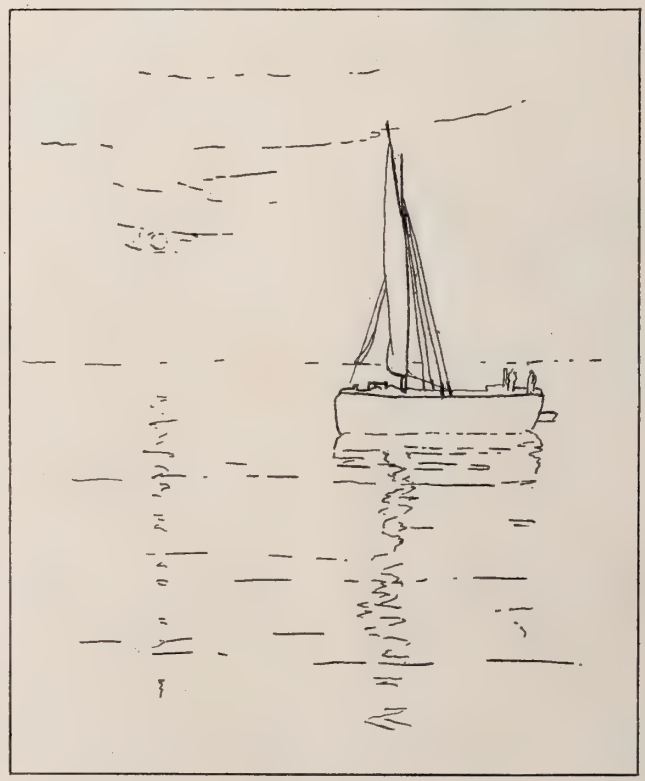
"For developing prints I use the Ilford M.Q. formula, I.D. 20, and always develop to finality, as I think that by this method alone is it possible to exploit fully the entire range of any paper. After fixing, washing in running water follows, again for at least one hour. This process must be thorough, especially if subsequent toning is contemplated. A large number of prints are bleached and redeveloped, this method giving richer blacks than are, I consider, obtainable by single development. The final processes of spotting, stumping and mounting are, perhaps, by no means the least fascinating of them all.

"I would, in conclusion, endorse the remarks so often expressed on this page. If you have not already done so, join a photographic society. The knowledge you will gain, and the friendships you will make, will richly repay you for the subscription charged. Also the competitions arranged by the society, together with those appearing in *The Amateur Photographer*, will supply the incentive so necessary to the would-be serious picture-maker."

(*A further example of Mr. Pitman's work is reproduced on one of the centre Art pages.*)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.



"SUN AND MIST," *by Wm. Jackson.*

ONCE again the virtue of simplicity is convincingly demonstrated. As far as subject material is concerned, it is limited in this picture to nothing but a boat and sea and sky. It is true, no doubt, that the sky is embellished by the inclusion of the sun and a few light clouds, and that the water is relieved by its ripples and reflections, but, for all that, the three elements provide the essentials, and, while nothing more seems to be needed, it is certain that nothing could be taken away without adversely affecting the appeal of the impression.

The restriction of the subject matter not only has the effect of lessening the problems arising in connection with the arrangement of the composition, but it also enables the features suggested by the title, which constitute the pictorial motive, to be well and truly conveyed.

The feelings of light and atmospheric mist are beautifully suggested, and, in addition, there is a sense of peace and quietude that renders the picture very satisfying and restful to dwell upon. Much of this suggestion of restfulness arises from the static impression which follows upon the predominating influence of horizontal and vertical lines. Practically all of them are either one or the other. The lines of the clouds, the ripples on the water, and the hull of the boat are inclined towards the horizontal, and those of the reflections and the sail are, to all intents and purposes, perpendicular. Some of these lines are slightly curved, but, while the variation is sufficient to avoid anything in the nature of an impression of monotony, the departure from the true level and upright is small and does nothing to mar the suggestion of quietude.

It is exceedingly well conveyed, and the subject was caught at a most fortunate moment. Its choice reveals a high measure of artistic vision, and, in the arrangement, the standard achieved is almost equally good. The boat naturally attracts the attention, in the first instance, as the most prominent element of the picture. Its mass and depth of tone are considerable and carry more weight than anything else, and the attraction so exerted is enhanced by force of position and by the suggestion of

imitation imparted by its reflection. Its supremacy seems unquestionable, and its weight of tone allows the lesser attraction of the sun and the path of light it casts along the water to serve as supporting accents.

Such an arrangement is perfectly satisfactory and does not offer any occasion for adverse criticism, but, just as was the case with another picture reviewed in our issue for the 26th August last—"Scintillation," by H. W. Lambert—it is possible that a composition of somewhat greater strength might result if the light of the sun and its reflections were brought more into conjunction with the dark of the sail and its repetition below. It is probable that this state of affairs would have happened had the exposure been deferred a moment or so, for the boat appears to be travelling towards the left and it would not take long for it to get into line with the sun.

There might be some little advantage in the alternative arrangement, and it would be interesting to make a comparison between the two. Which would be preferred is largely a matter of personal taste, and, for all that is known about the circumstances prevailing at the time, there may have been some condition or other which rendered it impossible for the revised arrangement to be secured. Still, the possibility is one that is worth consideration, and, on another occasion, might well be tried.

Another point that arises in connection with the arrangement is the placing of the boat. The student of composition is frequently warned against placing the principal object in the centre or on either the vertical or horizontal centre lines. In the general run of subjects, the rule is one that should be observed, but, in a case like this, although the hull of the boat rests practically dead on the horizontal centre line, it is made to appear above it because of the long stretch of reflections below, or, put in another way, the reflections create an illusion that it is higher in the picture space than it actually is. To put it higher would involve a suggestion of eccentricity in the choice of a viewpoint, and, if it were lower, much of the value of the reflections would be lost.

The exigencies of the subject seem to demand a departure from the normal form of arrangement. That being so, the violation of the rules, which should not be arbitrarily regarded, is certainly justified. "MENTOR."

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

THERE are the makings of an excellent landscape subject in No. 1 of the prints reproduced on the opposite page—"Loch Tummel," by A. G. England. The lines, however, do not fall quite as happily as they might; the weather conditions could, perhaps, be more favourable; and there are bits of intruding foliage on each side which form a disturbing feature.

Line in Landscape.

In a subject of this type, the distance is of considerable importance. The summit of the mountain, even if it does not happen to be the centre of interest, attracts a good proportion of the attention, and, in order that its position should be strong enough to maintain that attention, it should be placed more towards, but not too near, the centre.

Roughly, it should be placed about three-quarters of an inch to the right, but the existing arrangement of the middle distance should be much about the same. It is the relationship between the hillside coming down from the left and the mountain that is at fault, so that it is not a question of altering the line of sight, but of changing the point of view. The choice of a standpoint more to the right is indicated, for this would bring the distant mountain more to the right while leaving the hillside as it now stands.

The change would also involve a revision of the foreground, but it is quite likely that one that makes up equally well could easily be found, once the proper relationship between middle distance and distance had been settled, and then the lines of the composition would fall more happily together.

Weather Conditions.

If the print is any criterion, the weather conditions were very dull at the time of exposure. There is a slight suggestion of luminosity in the sky, nevertheless, but it is scarcely sufficiently pronounced to take rank as an effect and, from the pictorial point of view, the subject seems rather lacking in motive.

The vitality and life that only sunshine seems to confer is absent, and, for this sort of thing, no better weather can be chosen than when sunlight is intermittent and alternating with stretches of cloud shadows.

Here the clouds are too continuous, and, until they broke, the conditions that are in mind would not arise. Still, it is something to note that a very good rendering of the sky, such as it was, has been secured, and this, having regard to the manner in which blank skies predominate in the work of beginners, is something to have achieved.

An equally good rendering of cloud forms is to be seen in No. 6, "Poplars," by Joan K. Holland, and, in this instance, there seem to be some traces of sunshine in the lighter tones of the meadow towards the right. It might have been appreciably more pronounced with advantage, and the small tree in the foreground would have been better omitted. The choice of material, otherwise, is decidedly promising, and, perhaps, another visit to the same spot might result in an improved composition.

Position and Placing.

Without an exact knowledge of the ground, it is scarcely possible to offer a definite opinion, but it does seem as though a viewpoint more to the right and looking somewhat to the left might prove productive.

It would, at all events, be worth the trouble of making another visit, and, at the same time, it would be as well to keep in mind the possibility that an upright picture, instead of a horizontal, might be better suited to the character of the trees. With No. 5, "Morning on the Banks," by E. W. Barton, the rendering of the sky does not attain the same standard. It is regrettably blank and lacking in tone, and does not compare at all favourably with the prints already discussed. Nor are Nos. 3 and 4, "In the Shadows of Box Hill," by F. G. Reid, and "Post Hill Bridge," by Ella B. Sykes, any better. Some improvement, no doubt, could be obtained, in each of these three cases, by arranging for printing to be carried a shade or so farther, but it is questionable, even if this were done, if the skies would show as good a range of tone as Nos. 1 and 6.

The probability is that only the expedient of using a sky filter at the time of exposure would have enabled an equivalent representation to be produced, and now, unfortunately, it is too late for the suggestion to be adopted. The point should be borne in mind for future guidance.

Light Filters and Skies.

It is a distinct advantage to note such matters as this, for there is no doubt but that, used in conjunction with colour-sensitive plates or films, a light filter does enable a better rendering of sky tone to be secured than can be obtained by any other means.

In other respects, No. 5 shows a good idea of arrangement, though the tree on the left would be better placed if it were put about a quarter to half an inch to the right. The light stretching across the print just beyond the foreground strikes a pleasing note of variegated tone, and the distance completes a well-chosen scene.

In No. 3, the intruding branches on the right are a bit distracting, and either the whole of the tree, to which they belong, should be included, or they should be omitted altogether.

The lighting is too full on the side of the bridge that is presented to the viewer to be quite satisfactory in the case of No. 4, for there is no shadow to relieve its tone and not a little of its beauty of form is lost in consequence. A glancing light would be far more effective, for not only would it be inclined to introduce the required shadow tone as a relief, but it would also show the texture of the stonework to much better advantage.

Woodland Subjects.

No. 2, "The Woodland Path," by G. Brown, avoids the difficulty of obtaining a rendering of sky tone by the simple expedient of excluding it almost altogether, the small bit showing through the foliage being neither here nor there.

It is, however, a woodland subject and of a different character from any other on the page. All the same, it would be as well if some of those bits of light could be toned down a trifle, particularly near the edges, as they are inclined to draw the attention away from the sunlit path, which, judging from the title, is intended to be the main attraction, and which, so long as those lights are present, cannot maintain its supremacy.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

WORKING UNDER DIFFICULTIES.

IF I were in a more cynical mood than I happen to be, I should probably blurt out that photographers work under difficulties at all times and in all circumstances; but there is no disputing the fact that there are occasions—very rare in my experience—when everything happens to be in favour of our getting what we want, or something approaching it.

This is a story of difficult conditions.

I made a brief pilgrimage—there one day and back the next—to the little Suffolk town of Lavenham. Time was when it was one of the most flourishing weaving towns in East Anglia—and that is saying a good deal. Now it is so fast asleep that it has not even a cinema or a Sunday train, and very few people have so much as thought of "improving" their Tudor houses.

But my first difficulty arose from the fact that nearly all the few streets of the town were dug up to lay water mains, and the old market cross was hidden by stacks of pipes. Whenever I selected a typical house or a quaint street I found a foreground of trench, heaps of clay, pipes and notice-boards. I don't know why all this should have been reserved for my visit, when nothing of similar magnitude has been undertaken for two or three centuries.

What with the water question and the gloomy weather I retreated into the fifteenth-century church, familiar to me by photographs and engravings; but not having intended to go there till later, I had no focussing cloth with me. But I had my tripod, and the focussing screen of my $3\frac{1}{2} \times 2\frac{1}{2}$ camera had a folding hood, which got in the way of my nose even if it did not shut out much extraneous light.

If the sun had only peeped through it would have been in just the right position for the elaborate porch, Fig. 1. But I had to make the best of a rather flat lighting, and did what I have often done with apparent success in similar cases. I gave a full exposure, and instead of getting contrast by prolonged development I got it by subsequent intensification of the full-detailed but rather thin result. I think this dodge has its advantages.

Fig. 1.

Fig. 2.

Even without a focussing cloth I managed the font and aisle and some general views, focussing at f/4.5 and stopping down to f/16—a good all-round stop, I think, for interior work. When it came to a carved oak screen in a corner of the north aisle I simply could not see parts of it even at f/4.5, and had to judge the invisible from the visible. By stopping down again to f/16 and giving an exposure of a couple of minutes I got the rendering reproduced on the back cover, which reveals the further fact that I was working on Selochrome film pack.

The pew-end in Fig. 2 involved me in the most extraordinary bodily contortions in trying to study the image, and I suddenly realised that I was arousing the curiosity, not unmixed with apprehension, of a couple of American visitors. I have no doubt I shall figure as the subject of a side-splitting travel yarn.

In the dark recesses on the left of the pew are some carved misericordes. There was no getting a tripod in the space, so I stood my camera on a

large book on the shelf of the pew, and tilted up the back with another book. But however I squinted and squirmed I could not see the subject properly. So I opened a hymn-book and stood it on the top ledge of the miserere, focussed on that, judged the position of the rest, removed the book, and gave an exposure of four minutes at f/16.

Then I slid books and camera along the pew opposite the next carving, and repeated the operation. The next shift gave me—this time in three minutes—the one shown in Fig. 3. I think the other two are better, but I show this one, as it represents the "pelican" tearing its own breast to nourish its young—a legend pictorially told by the Egyptians some three thousand years ago.

Fig. 3.

Before I left the town I managed to pick up by degrees some more outdoor subjects. Some of them, when the light was better, were the usual average snaps at 1/25th of a second with f/8 or f/11. In several cases I did what I think might well be done oftener when focussing screen and tripod are available. At my leisure I arranged the subject on the screen—viewpoint, composition, rise or fall of front, stop, shutter speed—and then awaited a favourable moment for firing the shutter. It is a "snapshot" carefully arranged beforehand.

In the end I found myself with some thirty whole-plate prints, which, although I say it, convey an excellent idea of the characteristics of Lavenham. I worked under difficulties, but difficulties, it is said, are made to be overcome. W. L. F. W.

FAIR PLAY FOR THE VERTICAL LINES

A LARGE amount of ink has been spilled by various writers on the subject of perspective—especially with regard to buildings and the treatment of their perpendicular lines.

The traditional method of depicting these is, as everyone knows—to retain their uprightness—in photography by means of rising front or swing back, or a combination of both. During the last few years, however, a new school of thought has come into being, the disciples of which have decided that vertical lines must (or may) be treated in the same manner as horizontal parallel lines, that is, they must (or may) converge as they recede upwards.

Let us examine one or two aspects of this problem, which, so far as the writer is aware, have not as yet been discussed. Suppose we consider the position of the eyes. Nature has set these in the face or head horizontally, not only in the case of man but of all other animals; in the latter case, no doubt, for the purpose of being able to appreciate any threatened danger, which, of course, would come, not from above, but from a more or less horizontal direction. No one can dispute the fact that the range of vision horizontally is a very much wider one than vertically.

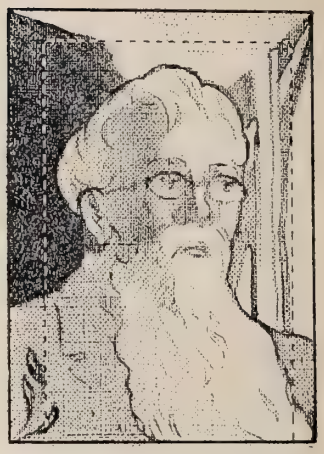
Now, in looking along a street or railway track the eyes are able to take in the whole of the length from a distance of a few feet without consciously moving the eyes. What happens, though, when we view, say, a six-story hotel or factory from across the street? Viewing either of these in the same manner as the railway track, one cannot see comfortably, and without some movement of the eyes, much above the second or third story; the whole of the building (vertically) has to be viewed in continuous sections from base to top, or vice versa, by upward and downward movement of the eyes (and head).

A more distant view, then, is required to take in the building without moving the eyes.

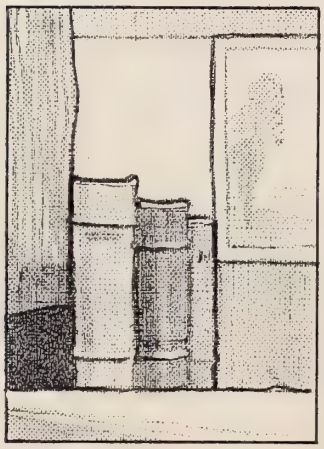
Now the writer would like to ask the stunt merchants of the converging vertical lines school to say, honestly, if at this farther distance the opposite sides of the hotel (or factory) *do* appear to converge.

In the majority of instances, space, we know, is restricted, but that is the photographer's misfortune, not his fault. The fault lies in not taking advantage of an apparatus which will enable him to get vertical lines vertically on the plate. The advent of the miniature camera, with its ease of manipulation and lack of rising front, is, in the writer's opinion, responsible for 99 per cent (or more) of the weird photographs of apparently drunken buildings.

Let us take another point of view (in both senses of the phrase). If the receding verticals of a building are to be treated as are receding horizontals—edges of pavements, etc.—the position of the photographer should be similar in both cases. Now in viewing the latter (edges of pavements, etc.), for example, the photographer is upright, that is, the line of his body is at right angles to the ground. Notice the difference when viewing the hotel. Instead of being at right angles, he is parallel to the walls (and verticals), and this is the reason why he cannot appreciate the full extent of the building as he can of the street.



Therefore, for the two cases to be comparable the photographer must lie on his back, and look upwards along the front of the building, and then, and *then only*, will he be able to see it with its perpendiculars assuming convergence.



Now if these people are honest and consistent in their attitude to the laws of perspective, let them photograph their tall buildings from this worm's-eye viewpoint, or, conversely, imitate the child's idea of receding horizontal parallels, and reproduce these as really parallel lines. We know (and they know) that this is impossible, but the rendering of vertical parallels *is* possible.

HERBERT MILLS.

Picture Points

No. 15 (New Series) *by RICARDO*

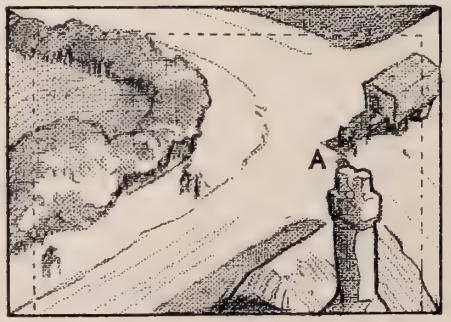
Lines Running into Each Other.

THIS is a fault very frequently found in prints from both beginners and advanced workers.

If we compare the two different sketches of the books we can see immediately the effect of allowing lines or contours of shapes to run into each other.

In the top sketch, this fault has been made in many places in order to emphasise its weakening effect. The lines of the background just coincide and run into the edge of the books as well as those of the frame and base. Not only does this destroy the effect of depth or modelling, but it makes it rather difficult to determine the exact shape of objects, and so becomes uninteresting. By comparing the two sketches we can see how this fault can be avoided and note the improvement made. It so happens that only straight lines have been dealt with in this instance, but it can also occur with any other type of line, whether a gradual or sharp curve, or whether it is well pronounced or softly defined.

It is very difficult to remove these faults once the print is made, so it will save much time and trouble if it is borne in mind before the exposure is made.

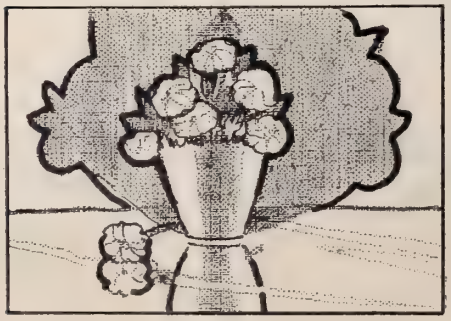


Watch the Corners.

LIKE many other points in composition, it seems trivial in itself, yet it is a point well worth watching, and will contribute towards good composition.

In the top sketch the subject matter has been so arranged that the contour lines are running to each of the four outside corners. Because they meet exactly at the corners they have the effect of drawing the attention towards each corner away from the main point of interest, which lies elsewhere in the picture space. It will be noticed that they need not necessarily be thin lines but can be the contours of any tone. Should the contrast between the two tones be strong, like that in the top left-hand corner of the portrait, it has naturally a greater attraction. Again, should two or more lines meet exactly at the corner, the pulling power of this corner is further increased.

The reason is not hard to see. If we have two lines, whether straight or curved, meeting at a point, there is a natural tendency for the eye to go to this point of intersection. This is illustrated in the lower sketch where the horse just meets the chimney-pot at A. The attention is greater than it would be if the horse were removed a little downwards towards the left thus avoiding a point. In each of the four corners of the lower sketch the fault has again been made, but with varying degrees of attraction. Such a fault can only be removed by either trimming or retouching, and a suggested trim is marked in dotted lines.

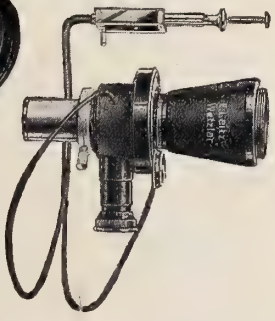


Repetition—Further Good and Bad Examples.

IT must be emphasised again that wherever repetition is used it must not be so pronounced and so evident as to draw attention to itself, or it will immediately become uninteresting and monotonous. It should always be introduced so that it is quite subordinate to the main point of interest and yet unconsciously strengthen and support the general design.

Repetition can take the form of lines or shapes and light or dark tones. It can also be found in any type of subject once the device is recognised. The two illustrations here show further examples of the use of repetition, both good and bad. On the left a dual lighting has been arranged so that the shadow on either side repeats the contour of the flower group, while further repetition is obtained by the use of a polished surface in which the shape of the vase is again duplicated. The effect of so much and such pronounced repetition obviously weakens the general arrangement and has defeated its purpose.

On the right, we have a similar object, but now with only one light placed at a suitable angle. The shadow is now not so exact a duplicate of the group, and the contour is much more pleasing. We have again obtained repetition, but in a more varied form, and this is the best illustration of what is meant by good repetition. In order to emphasise this point, the lines concerned have been made purposely thick and bold in both sketches.



MINIATURE CAMERAS OF DISTINCTION *By R. G. LEWIS.*

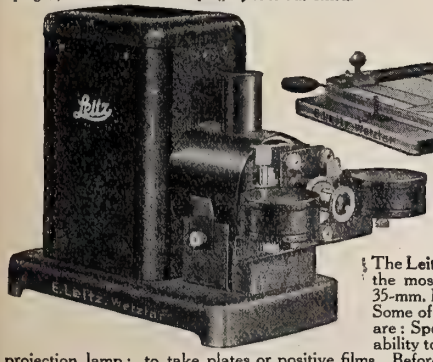
As is generally known, the firm of R. G. Lewis is the only one of its kind specialising exclusively in miniature apparatus. We stock every miniature camera of repute. Besides the cameras themselves, we have about 500 accessories for the Contax and a similar number for the Leica. We also stock every accessory for the Rolleiflex, Exakta and Super Ikonta, all fine-grain developers and every type of miniature film on the market.

THE LEICA

Perfected instrument of precision covers with its enormous range of special accessories every branch of photography—yet the Leica is the lightest and smallest universal camera. The camera illustrated is a Model IIIa, fitted with f/1.9 Hektor lens and Vidom universal finder. Write to us for complete descriptive literature.

THE LEITZ MICRO ATTACHMENT for the LEICA CAMERA

The Leica micro attachment is one of the most interesting and useful of Leica accessories. By virtue of the possibility of taking up to 36 exposures without changing the film-chamber, the Leica camera with the micro attachment is of special service in cases where it is desired to study and to record photographically an object undergoing rapid changes. Price, with automatic release, £11 7s. 6d.



THE LEITZ TELYT LENS

The Leitz 20-cm. f/4.5 Telyt lens has the longest focus of all Leitz special lenses and is particularly suited to bird photography, big-game photography, etc. It is fitted with a reflex attachment and a double release. Price £37 16s.

THE LEITZ FOCOMAT ENLARGER

The most efficient fully automatic enlarger for miniature negatives at present obtainable. Takes up to 4×4 negatives. Especially well ventilated lamphouse. Supplied with a glassless negative carrier, doing away with the risk of getting Newton's rings. Price, with 20-in. upright, £16 6s. 40-in. upright, 17s. 0d. extra.

THE LEITZ "HIGH INTENSITY" VIII-K PROJECTOR

For the Projection of 35-mm. Dufaycolor.

The Leitz VIII-K Projector is by far the most satisfactory for use with 35-mm. Dufaycolor, Agfacolor, etc. Some of its most attractive features are: Special water cooling system, ability to take a very high powered projection lamp; to take plates or positive films. Before the lamp is a three-lens condenser ensuring faultless illumination right up to the edges of the screen. The front lens is interchangeable in order to allow variation of the condenser to take lenses of various focal lengths. Price: With front attachment, £18 6s. With 120 projection lens, £22 3s. 6d. Write for full description.

THE FINE-GRAIN DEVELOPMENT OF MINIATURE FILM. OUR SERVICE

We are the only firm undertaking exclusively the fine-grain development of miniature film. Where enlargements not exceeding approximately 10×8 inches are required from Leica negatives, our normal tank development in fine-grain developer is perfectly satisfactory. In the case, however, of customers requiring very considerable enlargement from their negatives, or very special work for exhibition purposes, etc., we instituted at the beginning of the year our now well-known "Paraphenylene Service." Films for paraphenylene treatment are developed individually in Correx tanks, each film, from the time it goes into the tank until it finally leaves the drying cupboard, being handled throughout by a photographer with a ten years' experience of miniature technique.

IMPORTANT

In view of the confusion existing on the question of the previous exposure required where paraphenylene development is intended, we would particularly draw the customer's attention to the following points, which are based on experience gained from thousands of spools developed in this manner.

1.—SUPER-SPEED PANCHROMATIC FILMS (Agfa ISS, Kodak Super X, Perutz, Peromnia, etc.) it is *not essential* to increase the exposure when paraphenylene-diamine development is contemplated. In many circumstances, especially under artificial lighting conditions, this is in any case impossible. If customers will state when forwarding their films whether exposure has been normal, ample or even short, we will vary the constituents of the developer accordingly. A "straight" paraphenylene-diamine developer does not require over-exposure, but it is true that by the addition of glycin a slightly finer grain is obtainable, and in this case about half again to double the normal exposure is desirable.

2.—FINE-GRAIN PANCHROMATIC FILMS (Agfa FF, Panatomic, Perutz, Rectepan etc.).—In no circumstances must these films receive more than normal exposure. This fact, which does not seem to be generally appreciated, is of utmost importance. An over-exposed fine-grain panchromatic film developed in paraphenylene-diamine will produce a dense, contrasty negative of poor enlarging quality and by no means of the finest grain.

Finally, customers sending their miniature films to us for development may do so with the full confidence that they will not be just well developed, but that we will produce from them undoubtedly the finest results it is possible to obtain at the present stage of photographic dark-room technique. (Prices for standard fine-grain development, 1s. 6d. per spool. For individual development in paraphenylene-diamine, or in any other developer selected by the customer, 5s. 6d.)

ALL FILMS DEVELOPED BY OUR SPECIAL PARAPHENYLENE SERVICE ARE TREATED WITH "TEITEL'S SCRATCHPROOF."

OUR MINIATURE CAMERA REPAIR SERVICE

We are now able to place at the disposal of miniature camera users a well-equipped repair department. Repairs to miniature apparatus call for a high degree of technical skill, long experience and many special tools. Previously, damaged or expensive cameras usually meant waiting weeks—often months—while they were returned to Germany. We can now undertake practically any repair and return the apparatus within a few days. Repairs to miniature cameras only can be undertaken.

THE FOLLOWING CAMERAS REPRESENT A VERY SMALL BUT TYPICAL SELECTION OF OUR SECOND-HAND STOCK. WE HAVE A LARGE CHOICE OF SECOND-HAND LEICAS, CONTAXES, EXAKTAS, SUPER IKONTAS AND ROLLEIFLEXES. ALL ARE FULLY DESCRIBED IN OUR WEEKLY LIST WHICH WILL BE SENT ON REQUEST. A GUARANTEE OF OPTICAL AND MECHANICAL PERFECTION ACCOMPANIES EACH CAMERA.

Contax Model II, f/2 Sonnar lens, ever-ready case. As new	£39 10 0
Contax Model II, f/2.8 Tessar lens, ever-ready case. As new	£34 10 0
Leica Model III, black, f/3.5 Elmar lens, ever-ready case. As new	£23 17 6
Leica Latest Standard Model, black, fitted short base range-finder and case. As new	£14 7 6
Latest Automatic Rolleiflex 6×6, f/3.5 Tessar lens, Rapid Compur shutter, ever-ready case. As new	£20 10 0
Super Ikonta 530/16, f/2.8 Tessar lens, ever-ready case. As new	£23 17 6
Exakta Model A, f/2.8 Tessar lens, leather case. Excellent condition	£17 10 0
Contaflex, f/2 Sonnar lens, ever-ready case. As new	£55 0 0
Super Ikonta 530/2, f/3.8 Tessar lens, Rapid Compur shutter, ever-ready case. As new	£18 17 6

(HOLBORN 4780)

(Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

THE 'RETINA'

The Precision-Made 'Miniature' You CAN Afford

The 'Retina' is very modestly priced as 'Miniatures' go. It is excellently equipped, nevertheless, and the fact that it was chosen by the Everest Expedition speaks for its utter reliability under far worse conditions than you are ever likely to experience. Leading features: Schneider or Zeiss Tessar *f*3.5 Lens; Compur or Compur-Rapid Shutter, with speeds up to 1/300th or 1/500th second respectively; automatic exposure counter; optical eye-level viewfinder. The 'Retina' holds 36 exposures at a loading, using Kodak 35 mm. Film—"Panatomic" or Super Sensitive Panchromatic grades. A fine little, capable little camera. See it at your Kodak Dealer's.

KODAK LIMITED, KODAK HOUSE, KINGSWAY, LONDON, W.C.2

DON'T GUESS; DON'T GAMBLE!

The NEW EXAKTA REFLEX

IS THE BEST OF ALL THE MINIATURES

Exakta fitted with electric Vacublitz attachment for standard flash-bulbs, extra .....£2 5s.

Self-capping focal-plane shutter, 1/25th to 1/1,000th sec., slow speeds 1/10th to 12 secs., delayed action from 1/1,000th to 6 secs.

For V.P. Films, 4×6.5 cm.

Prices for "MULTI-SPEED" MODEL B.

Exaktar Anastigmat f/3.5....£19 10s.
Zeiss Tessar Anastigmat f/3.5 £23 10s.
Zeiss Tessar Anastigmat f/2.8 £27 10s.
Meyer Primoplan f/1.9.....£39 10s.

Extras:

Tele-Megor Hugo Meyer, 15 cm. £11 10s.
Wide-angle Tessar f/8, 5.5 ..£13 10s.
Ditto, Dallmeyer f/11, 2⅜ in.....£6 6s.

EASILY THE MOST SENSITIVE PHOTO-ELECTRIC METER AVAILABLE TO-DAY

Gives direct readings in relatively dark interiors as well as very bright exteriors. Scale clearly shows readings from 1/1,000th second to 4 minutes. The "SIXTUS" has no tables, yet it is capable of use with any film or plate from 6 DIN, 17° Scheiner to 21 DIN, 32° Scheiner, and with lenses from f/1.4 to f/45. The protective-case of the "SIXTUS" is securely fixed to the instrument and serves the dual purpose of a carrying case and convenient holder when using the meter in its normal working position. Complete in its case the "SIXTUS" weighs only 5 oz. and measures 2½×2×1 in. Can easily be operated by one hand.

COMPLETE IN BAKELITE CASE - 5 GUINEAS.

NEW "SIXTUS" METER FOR THE "LEICA"

Specially calibrated—showing all aperture values and times of exposure for the "LEICA." Built to the same design as the ordinary "SIXTUS," £5 5 0.

STOCKED BY ALL GOOD PHOTOGRAPHIC DEALERS.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Exhibitions and Competitions

CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, September 30. Rules in issue of August 26.

The Amateur Photographer Novices' Competition. Prizes of Roll Films for Novices' Prints. Closing date, September 30. Rules in this issue.

The Amateur Photographer Special Competition, illustrating "Can the Camera Lie?" Entries close September 30.

Wallace Heaton "35-mm. Film Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

XVme Salon International de Photographie de Bruxelles.—Open, May–October. (M. Maurice Broquet, Secretaire du Salon, Rue du Sceptre, 77, Brussels.)

I Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

The Folkestone Camera Club, Competition for the best photographs of Folkestone.—Entries close September 30. Cash prizes. (Ernst. F. Davidson, Hon. Secretary, Folkestone Camera Club, Town Hall, Folkestone.)

Chicago International Salon.—Open, July 23–October 4. (Alex. J. Krupy, Chicago C.C., 137, North Wabash Avenue, Chicago, Ill.)

XXXIe Salon International D'Arte Photographique de Paris.—Open, October 3–18. (M. E. Cousin, Secretaire de la Société Française de Photographique, 51, Rue de Clichy, Paris (9E).)

Forty-fifth Toronto Salon of Photography.—Open, August 28–September 12. (W. H. Hammond, Secretary, Toronto Salon of Photography, 2, Gould Street, Toronto, Canada.)

Tweede "Focus" Fotosalon.—Open, September 12–27. (Focus, Ltd., Fotosalon, Bloemendaal, The Netherlands.)

South African International Salon.—Open, October. (Hon. Secretary, Johannesburg P.S., P.O. Box 7024, Johannesburg, South Africa.)

Royal Photographic Society Annual Exhibition.—Open, September 12–October 10. (Secretary, R.P.S., 35, Russell Square, London, W.C.)

Buffalo C.C. Fourteenth Annual Salon of Photography.—Open, September 6–27. (H. W. Schonewolf, 528, Elmwood Avenue, Buffalo, N.Y., U.S.A.)

Morecambe, Heysham and D.P.S.—Open, September 9–16. (James F. Levisohn, B.Sc., 5, Douglas Drive, Heysham, Lancs.)

Fotoclub Zagreb, Fourth International Salon of Photography.—Open, October. (Fotoclub Zagreb, Masarykova II, Zagreb, Yugoslavia.)

London Salon of Photography.—Entries, September 2; open, September 12–October 10. (Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.)

Lincoln Camera Club.—Entries, September 5; open, October 15–November 12. (Miss E. Redfern, 146, Burton Road, Lincoln.)

XII Salon International de Fotografica, Zaragoza, Spain.—Entries before September 10; open, October. (Secretary, Sociedad Fotografica de Zaragoza, Plaza de Sas, 7, Zaragoza, Spain.)

Third Canadian International Salon of Photographic Art.—Entries, September 10; open, October 23–November 15. (Exhibition Secretary, Canadian International Salon of Photographic Art, National Gallery of Canada, Ottawa, Canada.)

Windlesham C.C.—Entries, September 10; open, September 25–26. Classes for members (Beginners, Advanced, Professional, also Open Class). (J. C. Hayward, Hallgrove, Bagshot, Surrey.)

IV International Hungarian Exhibition.—Entries, September 15; open, October 24–November 9. (Secretary, Magyar Amatörfényképezök, Orsz. Szövetsége, Budapest VII, Erzsébet-körut, 9, Hungary.)

Rotherham P.S. Forty-seventh Annual International Exhibition.—Entries, September 21; open, October 14–17. (E. George Alderman, Ruardean, Newton Street, Rotherham.)

Service Co. (London), Ltd., Happy Camp Snaps Competition. Cash prizes.—Entries, September 30. (Service Co. (London), Ltd., 273, High Holborn, London, W.C.1.)

Coronet Midget Camera Competition. Cash prizes.—Entries, September 30. (Coronet Camera Co., 310, Summer Lane, Birmingham, 19.)

Eighth International Photographic Salon of Japan.—Entries close in Tokyo September 30; open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo Asahi Shimbun, Tokyo, Japan.)

Photographic Society of America 100 Print Salon.—Entries, October 1. Limit 4 prints. Entry fee $1.00. (Dever Timmons, Salon Secretary, Box 216, Cashocton, Ohio.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Entries, October 1; open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

G.E.C. (Coventry) Third Annual Exhibition. Open classes for members of Midland Federation Clubs.—Entries, October 14; open, November 9–14. (P. H. Crosby, Hon. Sec., G.E.C. Photographic Society, General Electric Co., Ltd., Coventry.)

Johnson's "Holiday" Competition. Cash prizes.—Closing date, October 31. (Johnson & Sons, Ltd., Hendon, N.W.4.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Entries, November 1; open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.) Entry forms obtainable also from the Editor of *The Amateur Photographer*.

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Entries, November 15; open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr. 69, Antwerp.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

30.

SURFACE DOPE FOR PRINTS

ENLARGEMENTS which look flat and lacking in sufficient contrast can be made to look richer in tone quality and reveal shadow details by treating the surface with the following mixture:—

Turpentine	2 parts
Mastic varnish	1 part
Linseed oil	1 part

All of the above should be of artist's quality for clarity and permanence. Mix thoroughly and apply liberally on a wad of cotton-wool to the print surface. When the entire surface has been covered, take a fresh wad of cotton-wool and remove as much as possible of the dope applied. The print should then be set aside to dry for a day or two.

This dope will remove any pencil or conté retouching, but will not affect water-colour spotting. But if large areas have been treated with water colours the dope will tend to reveal the brush marks. For this purpose, it is better to dope the surface first and then retouch the large areas with an oil pigment of suitable colour.

This dope can be used on most surfaces or types of photographic paper, and by increasing the proportion of turpentine it will dry quicker, but the sheen will not be so bright.

INDEX FOR FACTS AND FORMULÆ

FOR the benefit of readers who are preserving the complete series of Facts and Formulæ, the following index of the first thirty is given herewith for ready reference.

The numbers refer to the order in which they appeared.

1. Roll Film Sizes and Numbers.
2. Metol-Hydroquinone (M.Q.) for Negatives and Bromide Papers.
3. Fixing Baths.
4. Lens Apertures and Relative Exposures.
5. Toning Bromide Prints.
6. Focal Lengths of Lenses, and Sizes Normally Covered.
7. Negative Reducers.
8. Colour Filters.
9. Amidol Developer.
10. Weights and Measures.
11. Fine-Grain Developers.
12. Miniature Camera Sizes.
13. Hyperfocal Distance.
14. Intensifiers.
15. Maximum Exposures for Moving Objects.
16. Mountants.
17. An Enlarging Table.
18. Permits.
19. Exposures for Moving Objects.
20. Self-toning Papers.
21. Depth of Field.
22. Factorial Development.
23. Focussing Point.
24. Gaslight Papers.
25. Copying Rule.
26. Quick Drying for Negatives.
27. Supplementary Lenses.
28. Desensitisers.
29. Calculating Lens Apertures.
30. Surface Dope for Prints.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Making Nature Films

By H. EMMETT.

The animated photography and photomicrography of Pond Life on ciné film is not so difficult as most amateurs think, as the following article proves.

THOSE of us who attend the local ciné theatre have seen occasionally such wonderful films as the "Secrets of Nature," or "Crystal Growth under the Microscope." One has wished for more of this class of work, for, after all, what is more wonderful, or so instructive, as the presentation of Nature's secrets upon the ciné screen?

We may think that this is a highly specialised branch of photography, but the making of such films is well within the scope of the amateur, both from a technical and financial point of view; in fact, the whole outfit for a home-made ciné-micrograph apparatus costs far less than many still cameras to-day.

The filming of such subjects as sticklebacks or tadpoles can be accomplished quite easily in a small rectangular glass tank, this being more or less proportional to a single frame of 9.5-mm. film. The tank can be made of two half-plates and wood strips made suitably water-tight. In such a tank I have kept tadpoles alive from the frog-spawn stage up to their transition into frogs, by adding fresh water once a week and putting in a little watercress.

The Water Tank.

The filming of tadpoles is very little different from the making of ciné titles—one has only to put the tank at the same distance away from the lens as one would a printed title, to ensure that the focussing is correct. The lighting is the more important, and by experimenting with back (transmitted) light one can obtain beautiful results, similar to those seen in a well-lighted aquarium.

Experimenting with the subject soon decides which is the correct angle of lighting, and whether a black, grey or white background is the most effective.

My own chief difficulty in the filming of tadpoles was not one of technique, but consisted in getting the tadpoles to swim about in the open, instead of grouping together in clusters on the bottom and in the corners of the tank. I found that sudden sharp taps upon the table caused them to scatter in all directions, and it was during these active moments that I set my camera going.

To make a successful film one must have plenty of tadpoles in the tank, say about 100 in a tank holding about half a pint of water.

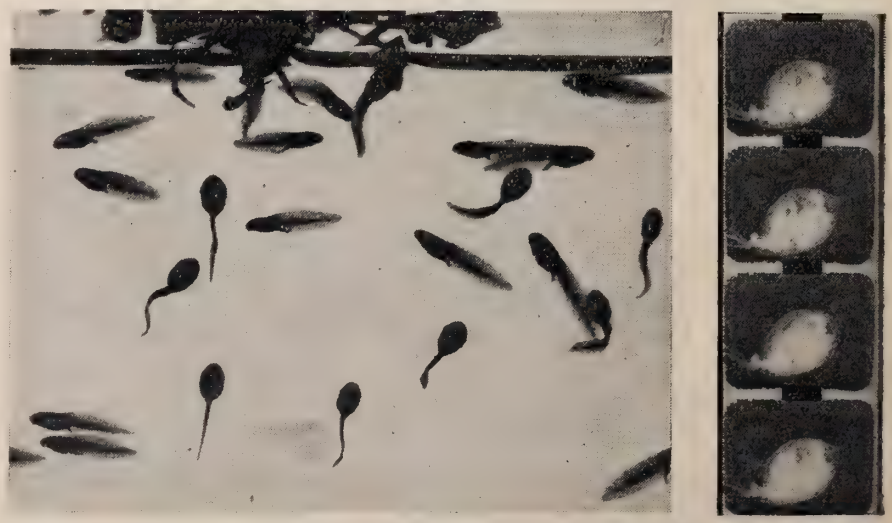
Any pond in summer-time contains a wonderful supply of life of many types. Apart from our familiar tadpoles, there are various forms of minute life, such as water-fleas, cyclops and diatoms.

For the filming of these minute forms, one requires a microscope in combination with a ciné camera—a low-power instrument will suffice—and an objective of about ½ in., sufficient to reveal the structure of our friend the water-flea.

Photomicrographic Apparatus.

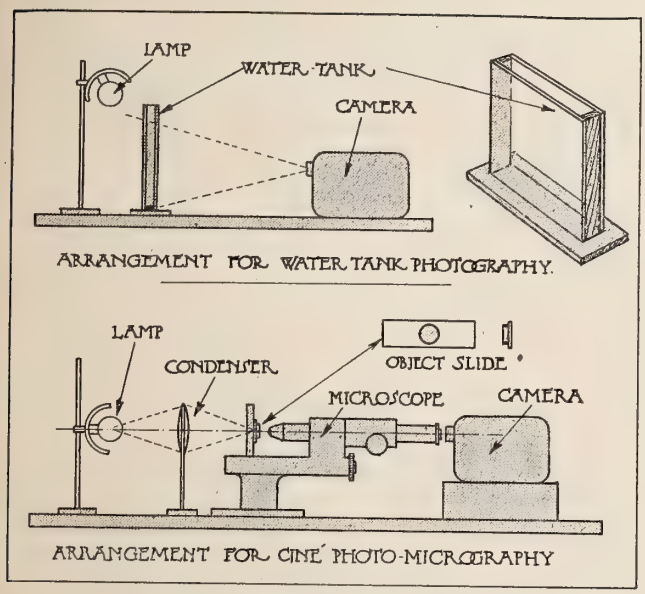
My own apparatus for this class of work—usually described as ciné-micrography—consists of a baby Pathé camera, microscope and a Pointolite. The whole apparatus is arranged horizontally with the camera resting on an adjustable support, so that the lens can be brought almost in contact with the microscope eyepiece if desired, as shown in the illustration.

When a water-flea is to form the subject of the film it is withdrawn from the pond-bottle by means of a thin glass tube, and is placed on the centre of a microscope slide. A little Plasticine ring is then pressed down around it, about ⅛ in. high, and after it is filled in with a spot of water, a microscope cover-glass is pressed gently on the top. We have now got the water-flea in a little sealed-up panel, all on its own, so that it cannot move far in any direction. It is now placed under the microscope objective and the Pointolite switched on. The next procedure is to cut a little piece of thin ground glass of such dimensions that it will fit neatly, matt side nearer the lens, in the film gate of the camera, so that the subject can be placed in position and focussed by means of the microscope focussing screw. This is essential for sharp focussing. All is now ready for filming: remove the focussing screen, load the camera, wind up the motor, and film for about five to ten seconds at a time, observing the movements of the subject on the microscope stage at the same time by means of a magnifying reading glass.



In my own case of filming this wonderful form of pond life I was able to obtain a full thirty feet of film showing almost every possible movement of legs, antennæ and internal organs.

Semi-transparent Objects Best.



The water-flea is a good subject, both for photomicrography and ciné-micrography, because of its delicate and semi-transparent nature. It is very common in ponds, and one can obtain many specimens merely by filling a bottle with pond water taken at random.

I have given only a rough outline of the methods I myself have used, though I hope sufficient to give a "spur" to those who wish to undertake this fascinating class of work.

A great asset in ciné-micrography is to possess a camera the lens and lens mount of which will screw out. I have

The illustration on the left shows the back-lighted tank of tadpoles. On the right is a short strip of 9.5-mm. film of the water-flea, also photographed in animation.

Illustrations of the two methods described.

had my own camera altered in design by the manufacturers, so that this can be done. By dispensing with the camera lens one can focus directly on to the ciné film, and utilise the whole field of the film. However, this alteration, though an advantage, is not essential; I have made successful films with and without the camera lens in position.

When an ordinary Pathé camera is used for ciné-micrography its lens is placed close to the microscope eyepiece. The rays of light from the eyepiece pass through the camera lens, the lens being of no value at all in forming the image on the film. However, because the lens is in position the image formed on the film is within a circle of about two-thirds of the film frame, but when the film is projected this circular effect is not displeasing, for it is a common thing in scientific work to display photographs within a circular mask.

Pond life will live in a large glass bottle for twelve months or more, if fresh water is added occasionally; in fact, the inhabitants of the bottle tend to increase rather than to decrease as time goes on. One can easily observe the movements of the water-fleas and cyclops with the naked eye by putting a bright light behind the bottle.

The film I have used chiefly in ciné-micrography has been Pathé R.O.F., and I have had no trouble with exposure or development of same.

It is wise to make a trial test on a few inches of film to ensure that exposure is correct, before running off the whole thirty feet.

In the case of filming "growing crystals" I have had very pleasing effects by using ordinary slow film, and developing it only to the negative stage, this procedure giving a practically grainless result upon projection.

I have found such films have met with great applause when projected with my ordinary ciné films of sports, etc., at shows during the winter months. There is no "news value" about Nature films, but they can be shown often, without losing interest; like "good books," time has no effect upon them.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS

We have just received the new Zodel book from Wallace Heaton, Ltd., a fully illustrated catalogue of 36 pages of cameras and equipment, together with current prices. This catalogue will be sent post free to all readers on application to this firm at 127, New Bond Street, London, W.1.

The latest winner of the Wallace Heaton Weekly Competition was William E. Jordon, 47, Dollis Road, Church End, Finchley, N.3, to whom an award of 21s. has been made. Full particulars of this competition will be found in our advertisement pages.

There is a movement in the Harpenden district to form a photographic society, and it is probable that a preliminary meeting will be convened at the end of September or early in October. Meanwhile, those interested in the proposition are requested to communicate with Mr. J. H. L. Adams, 12, Moreton Avenue, Harpenden, Herts.

A developing tank for roll films that is instantly adjustable to take any of the most popular sizes of films is the outstanding feature of the "Perplex" tank. It consists simply of an inner cage which holds the film, and the outer case which is fitted with a removable lid and holds 16 oz. of solution. It is made throughout of hard moulded material which is impervious to all the usual solutions. The cage is shaped like a spool-holder with very large circular ends. On the inside faces of each of these two ends is a continuous spiral groove into which the film is fed, and which supports the film at an even spacing throughout all the various processes. There is thus no need for an apron; the spiral channel has a pitch of $\frac{1}{4}$ in., and is $\frac{1}{8}$ in. deep, and allows free access of the solution to the film. The film must be loaded into the cage in the dark-room, but it enters and rolls round in the top and bottom spiral grooves very easily. One of the two ends slides up and down the middle spindle and automatically drops into position for each of the various widths of film, $2\frac{1}{2} \times 4\frac{1}{4}$, $2\frac{1}{4} \times 3\frac{1}{4}$, 2×3, $1\frac{5}{8} \times 2\frac{1}{2}$ and 35-mm. (12 exp.). A key-way down the centre spindle provides accurate alignment for the adjustable end, so that the beginning of each of the two spirals exactly coincides for loading purposes. Running along the bottom of each spiral groove there is a series of slots which afford a free flow of solution to the entire surface of the film. When the cage is loaded with the film it is placed into the outer case and the lid fitted while still in the dark-room. All further operations of developing, fixing and washing can now be carried out in daylight, and the solutions are poured in, and removed by two cavities in the light-tight lid. A separate key spindle allows the cage to be rotated in the outer case for agitating the film in the solutions. The "Perplex" tank, price 25s., is obtainable from The Westminster Photographic Exchange, 111, Oxford Street, London, W.1, or any of its branches.

Readers who are for any reason unable to attend or belong to a photographic society will be interested to know that the Forest Hill Postal Club has a few vacancies for keen workers of the intermediate class. Full particulars from the Hon. Secretary, C. W. H. George, 20, Gordonbrock Road, London, S.E.4.

A new book, entitled "X-ray Manual," has just been published by Kodak, Ltd., Kingsway, London, W.C.2. It deals with all the various aspects of radiography and is an excellent, well-illustrated handbook for all who are engaged in this work. The apparatus, exposure, shadow formation, intensifying screens and the dark-room equipment and processing, etc., are all dealt with in detail. It will be sent gratis to all who are actually engaged on X-ray work on receipt of their trade card or letter heading.

A course of photographic lecture-demonstrations has been arranged by the Herefordshire Education Committee. For the whole course of about sixteen lectures the fee is only three shillings. The series commences on Monday, October 19th, and early application to join should be made to Mr. P. H. Alder-Barrett, St. Owen's Evening Institute, Hereford.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Viewing Filter.

I have in my possession a dark yellow brown glass, 1½ in. square, and have been told this is a viewing filter. Is this so, and what is its exact purpose? J. G. T. (London.)

From the description supplied we think it is the Wratten Monochromatic Viewing Filter, made by Kodak, Ltd. It is intended to be used for viewing the subject to be photographed and should be held about an inch away from the eye. The colours in the subject are then neutralised as far as possible so that their tone values will approximate to those ultimately given by the monochromatic rendering in the negative. It is for use in conjunction with orthochromatic negative material and normal yellow filter.

Mottled Films.

What is the cause of the curious mottling on the enclosed plate? It is typical of many I develop, even though the plates and the developer were perfectly fresh. Can they be removed? T. T. (London.)

The marks are undoubtedly due to uneven development caused through the developer being allowed to act on the emulsion without occasional rocking. This fault is more common with dish development than with tank development. Although it is quite unnecessary to keep the dish or tank rocking all the time, an occasional agitation in both directions, to ensure uniform development will prevent such marks occurring. There is no remedy for them once they are evident on the negative.

Grammes to Grains.

If weights of chemicals are given in grammes how can I find the equivalent in grains? G. B. B. (Guildford.)

It will be sufficiently accurate for photographic purposes if you reckon a gramme as being 15½ grains.

Cut Films.

Are there any disadvantages with cut films, as very few amateurs seem to use them? J. D. F. (Brighton.)

The main reason why amateurs do not use cut films is that they require a little more care in processing than plates, and necessitate extra carriers for the dark slides. These are perhaps the only disadvantages with cut films. They are, however, superior for reducing bulk for storing purposes, compared with plates, and are considerably cheaper than film packs. They have a much thicker base than either pack films or roll films, and do not damage so easily. There is, of course, no difference in the emulsion compared with their corresponding plate, pack or roll film.

Chemical Focus.

What is the meaning of chemical focus when applied to a lens? J. D. M. (Guildford.)

If you substitute "actinic" for "chemical" it is easier to understand. It is used in contradistinction to the visual focus of a lens and in practice they are both applied to Meniscus lenses that to-day are fitted only in very cheap film cameras. If we were to place a ground-glass focussing screen in place of the film and focus (if possible) a distant scene, we would find that when we substituted a film for the ground glass and made an exposure, the scene would be quite fuzzy. If, however, we were to move the lens a little nearer to the film instead, the picture would then be quite sharp. The reason is that we focussed the subject by means of the "visual" light, to which the eye is most sensitive to the yellow rays, but the photograph was made mainly by the "actinic" or "chemical" light, or the ultra-violet rays. These two different rays cannot be brought together at one single point, on the negative, by a cheap Meniscus lens and needs a Meniscus *achromatic* lens, which is corrected for these two rays. The difference between the actinic and visual focus is about 1/40th of the focal length, so that for a 4-in. lens we should have to move the lens 1/10th in. nearer to the film after focussing.

Under-developed Negatives.

Can you tell me if the enclosed negative is under-exposed or under-developed? A. G. A. (Birmingham.)

The negative is obviously under-developed because detail can be seen even in the clearest or shadow portions, and this denotes that exposure was ample. The negative is "soft" or "thin" because the developer was not allowed to work on the emulsion long enough to build up the correct contrast. If the negative were under-exposed there would have been no detail visible at all in the clear parts, while the denser areas would have been dark according to the time the negative was in the developer. We advise you to intensify the negative in the chromium intensifier.

Drying Marks.

What is the cause of the mark on the enclosed negative? It was not there after developing or fixing. O. D. F. (Halifax.)

There seems little doubt that the marks were caused by uneven drying after the final washing. Always make a practice of swabbing the negative free from all surplus water on the emulsion side before putting it aside to dry. It is equally important to see that they are not left to dry where they can be splashed again, and this could easily have been the cause of your negative being marked. When plates are placed in a rack to dry, place them all one way, i.e., emulsion of one plate facing the glass side of the next, and allow at least half an inch between each two If they are not dry all over when required they must not be removed and dried off by heat, as this will be almost sure to cause a "tide-mark" to show round the damp portion when it is finally dried.

Small Stops and Definition.

Is it a fact that greater detail can be secured by using a smaller stop on the lens? W. E. M. (Wembley.)

It depends on the type of lens used, and on whether "greater detail" means a greater depth of field. On many of the old types of single lenses sharp definition of the *focussed* object could only be secured by comparatively small stops, because of the poor corrections between the visual and actinic rays. With the modern anastigmat, provided that a certain point on an object were correctly focussed on the plate, it should be just as sharp at f/4.5 as it would be at f/32. The depth of field and its definition, however, increases as the lens is stopped down, whether it is an anastigmat or a simple meniscus lens.

It is New! It is Different!!

You have never before read a photographic book as helpful and instructive as—

PHOTOGRAPHY AND THE ART OF SEEING

By Marcel Natkin, D.Sc.

Some of the 34 Chapters—

Photography and Reality : Pictorial Photography ; Realism in Photography ; Photography for Advertisement.
Composition : Unity ; Interpretation ; Setting ; Harmony and Spacing ; Lines in a Composition ; Atmosphere.
Lighting : Shadows ; Against the Light ; Night Scenes ; Perspective ; Relief ; Expressions of Movement.
Personality : The Head ; The Figure ; Snapshots ; The Nude ; The Group.
Suggestions for Spring ; Summer ; Autumn ; Winter.

Illustrated by the following famous photographers—

Pierre Adam ; Albin Guillot ; Boucher ; Brassai ; Remy Duval ; Goursat ; Keighley ; Kertesz ; Kollar ; Krupy ; Man Ray ; Meerkamper ; Natkin ; Person ; Schall ; Sougez ; Vadas ; Wolff.

Size 11 in. × 9 in. Photogravure throughout. Strongly bound in Art Vellum. Jacket illustrated by F. J. MORTIMER, F.R.P.S.

The WORD

LEICA

● **To all who follow the modern trend in Cameras that word "LEICA" means much. And at each and all of the "Four Westminsters" it has a significance all its own. There, LEICA Cameras and the wide range of LEICA accessories—hardly less notable than LEICAS in themselves—play a very big part in day-to-day and hour-to-hour activities. At any of the "Four Westminsters" you can see and examine the whole LEICA range.**

● **Go then into any Westminster shop and learn all about LEICAS . . . and EXCHANGING your present Camera, or BUYING OUT-OF-INCOME, which is easily arranged—at the "Four Westminsters."**

This is the LEICA Model IIIa, automatic focussing f/2 Summar lens, Shutter speeds to 1,000th. Costs £43, or 9 payments of £5 0s. 4d. (Other models from £16.)

● *Ask about Special Leica "Valoy" and "Focomat" Enlargers.*

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.
For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

'SERVICE SUPREME'

NOW PASTE THIS IN YOUR ALBUM

ABOUT PROCESSING

We take great pride and care in all classes of DEVELOPING, PRINTING and ENLARGING, as well as special photographic work which is either too difficult or too much bother for other folks to do.

If you require anything out of the ordinary in the way of that maligned term "photo finishing," just let us know and we will quote by return giving fullest information.

We do NOT advocate a rush service as it is not possible to achieve the best possible results, but prefer to take our own time and do the job properly WITHOUT EXTRA CHARGE to the usual standard prices.

Extensive alterations to our plant and new equipment recently installed for high-class work by fully-trained staff.

MINIATURE PROCESSING

of all types of film emulsions (including Dufay-Leica colour films), using the finest chemicals and most suitable formula. Contact printing on continuous perforated paper. Positive film printing for projection. Contact or enlarged Lantern Slides in black-and-white or tinted finish. Enlargements from 3½×2½ to 22×16 in.

GENERAL PHOTOGRAPHIC WORK.

Copying and Reproduction Negatives by contact, reduction or enlargement. Lantern Slides from large or small negatives or prints.

Black-and-white or Toned Enlargements of all sizes supplied on any grade of Kodak or Agfa papers of customer's own choice—again without extra charge.

Originals, Negatives, Prints, Legal Documents, Drawings, Maps, etc., and all classes of private photographic work treated with absolute confidence and despatched by registered post.

Prints or Enlargements dry-mounted on mounts or in customer's own albums, and titled if desired. LARGE SELECTION of loose-leaf and bound ALBUMS at popular prices from pence to pounds.

● ● ●

Any make of camera from 5/- to £50 supplied right away for Cash, Exchange, or on Hire Purchase Terms financed entirely by this old and widely respected company.

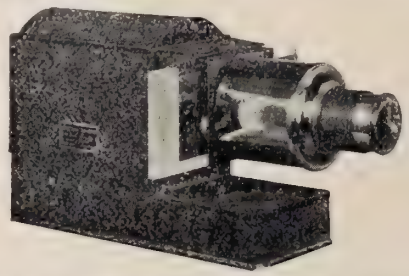
New Low £95 Price

We are New British Agents for this new latest model that is having a sensational demand.

EXCHANGES. INSTALMENTS, 9, 12, 18, 24 MONTHS

500 WATT. 1,600 ft.



£39 : 10 : 0

The New De Vry 16-mm. Projector, triple-claw action, 500-watt **DIRECT** illumination, large f/1.65 lens, booster reflector, takes any reel 100 ft. to 1,600 ft. (the latter giving one hour show at one threading). Built by the famous De Vry engineers, who are setting a new high standard to 16-mm. by machines made on sturdy 35-mm. De Vry lines, giving highest possible quality. Complete in ready-for-action case.

Seven days' approval against remittance willingly.

PROJECT

Your Dufaycolor natural colour pictures, or make fascinating lantern slides from your pictures, and surprise your friends by projecting them on a screen.

Edwin Gorse introduces this new Home Projection Lantern that will give you a 5-ft. picture, and show your pictures to advantage. All-metal body, compact home design, ample ventilation, hinged back door, 6-in. focus lens, double condensers, slide carrier, complete in case.

Your pictures are better projected. Take up this new hobby now and surprise your friends by a projection show.

50/-

Seven days' approval against remittance. Immediate refund if not delighted. Or 10/- down and 2/6 weekly.

"INTERMITTENT"

The New "DE VRY" Projector has set a new high 35-mm. type standard to 16-mm. projection, giving 35-mm. high quality perfection. 16-mm. De Vry Intermittent Superlux Projector, large f/1.65 lens, 750-watt (or 1,000-watt) direct illumination, 1,600-ft. capacity, radial type illuminated dial showing all controls in the dark, the famous 35-mm. De Vry "gear chain" drive, largest 35-mm. super condensers, and everything built for 35-mm. quality. The **Secret** is—the new system De Vry **Intermittent** sprocket drive (like all 35-mm. machines). **No claws,** no grabbing, no wearing film. Intermittent **always** in contact with **five** perforations at edges of film.

The World's Finest 16-mm. Superlux Projector.

Splicing, Editing, Titling, etc., on the premises promptly and cheaply.

Ciné photographs of weddings and other functions.

Evening shows by expert operators in customers' homes, anywhere in England.

Very complete lending library of all sizes of sound and silent ciné films.

HAVE YOU HEARD OF OUR SPLENDID NEW SERVICE ?

Our "MICROLUX" Service of developing in Paraphenylene-Diamine and other agents ensures the best results from your film; results which have so minute a grain size that they will enlarge twenty diameters or more without the grain becoming apparent, but owing to the nature of this development it is **essential** that films for "MICROLUX" development receive at least **twice the normal exposure.** Providing this extra exposure is given, negatives developed by our "MICROLUX" process possess a quality that cannot be equalled by ordinary methods, but to submit a film which has received merely the bare minimum exposure to this form of development will not yield good results. The latter we can also develop under the same "INDIVIDUAL" conditions, but in this case the results are not of such microscopic grain size. We offer this service, confident in the belief that it will meet the requirements of those careful workers who would always do their own processing had they the convenience.

"MICROLUX" and "INDIVIDUAL" Development Prices.

Leica, Contax and similar films: Per 36 exposures, **4s. 6d.**; per 12 or 18 exposures, **3s. 6d.**

All other 6, 8, 12 or 16 exposure films (up to 3¼ × 2¼ size): Per film, **3s. 6d.**

Note.—When sending films for this special treatment it is more than usually necessary to advise us as to the make and type of film used.

TRY THESE DEVELOPERS

"W.H." Paraphenylene-Diamine. The finest fine-grain developer. Sufficient per tin for 20 oz.. **1s. 0d.**
Tetenal Ultrafin. Non-poisonous fine-grain developer, can be used six times..... **4s. 0d.**

SELOchrome

FILM PACK

No more conclusive proof of the photographic efficiency of Selochrome Film Packs could be provided than this fine photograph by W. L. F. Wastell, Hon. F.R.P.S.

It leaves nothing to be desired in richness of detail and tone gradation.

Remember the six big advantages of Selochrome Film Pack — No fogging. Every film lies flat. All tabs are of different lengths. No sticking or slipping. Any film can be removed for development before the whole of the pack is exposed. Correct register with *all* adapters.

Made in England by **ILFORD LIMITED, ILFORD, LONDON**

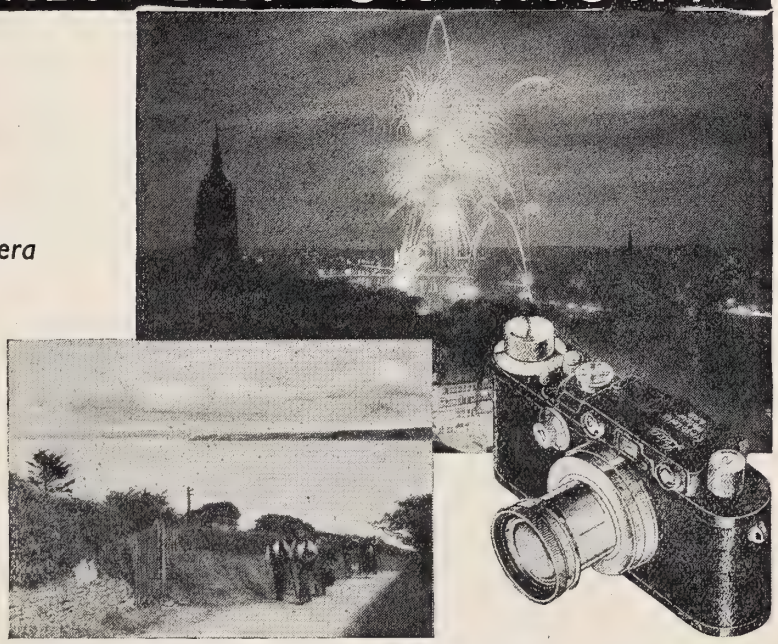
PERFECT PICTURES DAY OR NIGHT



WITH **Leica**

The **PIONEER** *Miniature Camera*

Leica **created** the miniature camera vogue, and is to-day the acknowledged leader. Night photography without the aid of special lighting is only one of its many assets. The Leica pictures on the right are the merest indication of Leica possibilities. In addition it will give superlative results of portraiture, architecture, animals, flowers, and close-up work of all descriptions. It is also largely used by doctors and research workers for intricate detail work.

Model II, with f/3.5 Elmar	£23	10	0	cash, or 9 monthly payments of	61/10
Model III, with f/3.5 Elmar	£30	10	0	cash, or 9 monthly payments of	71/2

This snap won a cash prize in a recent Wallace Heaton Competition—Why not send YOUR efforts as soon as possible?

COUPON which must be attached to your entry.
WALLACE HEATON
35-mm. Film Competition.
September 9th, 1936.

ONLY 3 WEEKS LEFT

TO WIN A PRIZE IN WALLACE HEATON'S

35-mm. Still Camera Competition

Open to users of cameras taking 35-mm. film as their negative medium, such as Leica, Contax, Contaflex, Retina, Rolleiflex (if used with ciné film attachment).

The Competition is open until September 30th. Your photographs can be of any subject—but they must be taken on 35-mm. film. Prints should not be smaller than 6×4.
Any number of prints can be sent in in any one week, but each photograph must have the coupon attached.
Each photograph must have on the back a coupon as below, and the name and address of the sender, the make of camera and material used.

£1 1s. AWARDED FOR EACH WEEK'S BEST PICTURE

For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of prize-winning prints must be made over to us without further payment.

In addition we are offering a special prize of £1 1s. per month for the best photograph submitted depicting a person or persons using a camera purchased from Wallace Heaton Ltd.

FIRST PRIZE OF £25 CASH

Awarded for the best picture submitted during the run of competition.

All prints will be judged at the end of the Competition for the final prize of £25 cash. Acceptance of these rules and conditions is a specific condition of entry.

SEND IN YOUR ENTRIES NOW TO: "COMPETITION,"

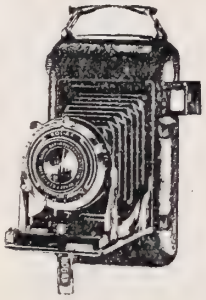
WALLACE HEATON LTD.

127, NEW BOND STREET - - LONDON, W.1

"... THANKS FOR YOUR PROMPT

THE ABOVE IS AN EXTRACT FROM A RECENT LETTER—

OUR TERMS ARE THE EASIEST. We give you nine months to pay, and you start using your purchase after making the first payment. No harsh formalities. Only 5% is added to cash price—or 5/- if under £5. You can make your choice from the finest range of apparatus in the country.



"ROLLEIFLEX"

The easiest manipulated camera you could buy. Shows your picture full size and right way up on ground-glass screen. Fitted with Compur shutter, speeded to 1/500th sec., T. and B., and Zeiss Tessar f/3.5 lens.. **£25:0:0**

Nine monthly payments of 58/4.

"REGENT"

The latest model, taking 8 or 16 pictures on 3¼×2¼ roll film. Has coupled range-finder, optical eye-level finder, Zeiss Tessar f/4.5 lens, Compur shutter, speeded to 1/400th sec., complete with leather case... **£20:0:0**

Nine monthly payments of 46/8.

Kodak Six-20, as well as other Kodak models from 5/- upwards, all in stock.

SUPER IKONTA

Takes 11 pictures on 3¼×2¼ 8-exposure roll film. Distance meter coupled with the focussing. Direct built-in view-finder, Compur **Rapid** shutter, speeded 1 to 1/400th sec. With f/2.8 Zeiss Tessar lens **£28:5:0**

Nine monthly payments of 66/-

KEYSTONE "8"

One of the smallest and lightest ciné cameras in the world. Simple loading by daylight or at night. Is fitted with direct-vision and auxiliary view-finders, 3 speeds. Strong, silent motor takes 25-ft. films at a winding. Footage indicator, geared to mechanism. Interchangeable lenses. With strap handle for convenient carrying.

With f/1.9 lens **£16:16:0**

F/3.5 ..... **£10:10:0**

Nine monthly payments of 39/3 or 24/6.

"ROLLEICORD II"

Automatic film wind. New type reflex hood, and larger magnifier. Depth-of-focus and focussing knob combined. Engraved exposure plate. Takes all Rolleiflex accessories, excepting angle mirror. Takes 12 exposures on 3¼×2¼ roll film for 1/-.

PHOTOGRAPHY MADE EASY

THIRD EDITION
REVISED THROUGHOUT

By R. CHILD BAYLEY

Author of "The Complete Photographer," "Hand Cameras," "Photographic Enlarging"

Crown 8vo. 250 pp. Stout paper covers
Price **2/-** net By post **2/3**
Obtainable from all leading booksellers, or direct by post from the Publishers

AS EASY AS A·B·C

This is a book for photographic beginners, and, if carefully studied, it will enable the novice with a camera to get a greater proportion of successful photographs than would usually be the case.

"Photography Made Easy" should be read by everyone taking up photography: it should form as much a part of the outfit as the camera itself: it is an ideal present to give an amateur photographer.

ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON, S.E.1

Of course, you know—

that the Camera shown here is a LEICA—one of a wide range that you can see at any time at any of the FOUR WESTMINSTERS. Possibly you have thought that you would like to possess a LEICA—but price, and other considerations, may have caused you to hesitate. It is as well to know that you will find a Leica definitely easier to handle than the other cameras you have had—and it possesses helpful features all its own. You certainly needn't be *afraid* of a LEICA. For the rest, WESTMINSTER'S Liberal Exchanges and advantageous Out-of-Income arrangements are a sufficient answer to such other questions as may arise.

This is the LEICA Model IIIa, having shutter speeds up to 1/1,000th of a second, f/2 Summar lens, and, of course, completely automatic focussing. It costs £43, or can be acquired by 9 monthly payments of £5 0 4. There are other models from £16.

FOR BETTER ENLARGEMENTS from Miniature Negatives

These new Selo Films for Leica, Contax and similar miniature cameras combine extreme sensitivity with fineness of grain. They yield sharp, clear enlargements almost indistinguishable from contact prints.

SELO H.P. FILM

FINE GRAIN HYPERSENSITIVE PANCHROMATIC

As fast as a fine grain film can be and remarkable for its fineness of grain. Difficult fast moving subjects can be photographed with the certainty that the negatives will be capable of enlarging to a great degree.

SELO F.P. FILM

EXTRA FINE GRAIN PANCHROMATIC

Absolutely the finest grain film made. Intended for the serious and exacting miniature camera user. Gives perfect negatives of first-rate enlarging quality.

SELOchrome FILM

SPECIAL FINE GRAIN ORTHOCHROMATIC

A splendid all-round film for every type of miniature photography by daylight. Anti-halo backed.

These Selo Films are contained in a special Daylight Cassette of patented design which gives greater safety in handling, prevents scratching and obviates friction. Your photographic dealer can supply.

VOL. LXXXII. No. 2496.

TOPICS of the Week

FROM the exhibitions of the Royal Photographic Society and the London Salon of Photography, both of which open to the public on Saturday next, the reports to hand indicate that two very fine shows will be presented this year. The entries have been more numerous than ever, and in the case of the Salon constitute a record. As a result, with such a large amount of good material to choose from, the standard of the exhibitions will be very high and our readers should on no account miss seeing them. They both remain open for a month. The first part of the annual exhibition of the Professional Photographers' Association is now open at the Prince's Galleries, Piccadilly, W. This section is devoted to "Photography in Commerce and Industry," to be followed in a fortnight's time by a display of British Professional Portraiture. The address of the R.P.S. is 35, Russell Square, W.C., and that of the Salon is The Royal Water Colour Society's Galleries, 5a, Pall Mall East, London, S.W.1.

The New Stamp.

We cannot share the indignation of the R.A.'s and others who have been protesting against the new postage stamps. It was quite time a movement was made towards something more simple and photographic, more modern and original, than the pretentious and over-elaborate designs which have given people all over the world a wrong notion of the quality of British art. It is true that it is less than one square inch of space that has to be filled, but when it is multiplied twenty million times a day—for that is what it amounts to—it is worth while filling it as pictorially as possible. All these wreaths and scrolls and meaningless emblems have made the British postage stamp not worth studying, which is the more of a pity because England is the home of the postage stamp, and the first stamp, the "penny black," issued very nearly a hundred years ago, was both simple and beautiful. We have a new reign which already has broken away in many respects from conventionality, and a King who, notwithstanding his forty-three years, has a head and features which bear the stamp of youth, and it is certainly worth while that the portrait of him which his subjects and others will most commonly see should be a living likeness, not an artist's convention, and should be unencumbered by stereotyped decorations. The portrait on the new stamps is one that should, in any case, appeal to our readers, as it is practically a direct reproduction from a photograph. The original print, by Hugh Cecil, is being exhibited by Royal permission at the London Salon of Photography.

LONDON LANDSCAPES (No. 45).

Bathing in the river at Bishop's Park, Fulham.

Too Close-ups.

In the Olympic games in Berlin cameras were attached to the blades of the oars in the rowing events, and in the mounted events to the saddles of the horses, also an automatically steered camera was fixed to run on a rail beside the 100-metre track. This idea appears capable of infinite extension. We are sure the manufacturers of cameras would not object if miniatures were used as bails on the wickets in test matches in order to get good views of the approaching ball and of the swing of the bat; perhaps even a tiny camera could be cunningly incorporated in a tennis racket, or take the place of the button on the point

of the fencing foil. A really riotous film might be made, if it has not already been done, by attaching a camera to the tail of the electric hare in a dog race. Spain has got other things to think of than bull-fights just now, but what a view of the dancing matador if a camera could be mounted on the bull's horn! Have our friends who specialise in Zoo photography thought of this possibility for more adventurous pictures?

Weighty Tomes.

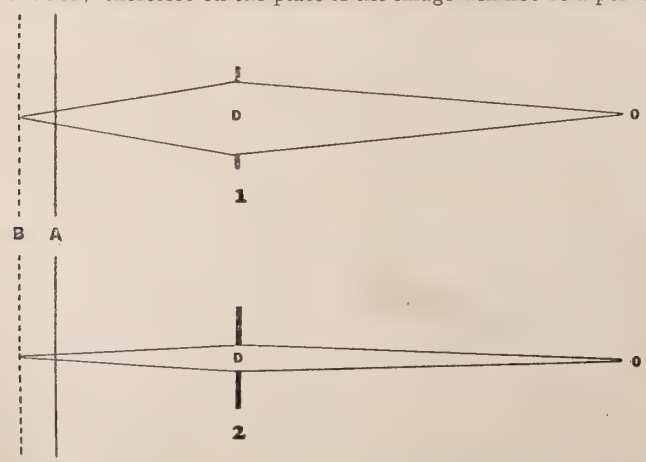
Photographic textbooks grow bigger and bigger. Wall's "Dictionary of Photography" in its thirteenth edition ran to 645 pages, itself a reduction on the previous edition, which ran to 681. R. C. Bayley's "Complete Photographer" was of very modest length, taking not quite 400 pages, and the proceedings of the International Congress held in London in 1928 were compressed into fewer than 600. But what is one to say of the latest edition of L. P. Clerc's "La Technique Photographique," which occupies nearly 1,000 pages—960, to be exact—of large size and small print? It is occupied, too, entirely with technique, and does not enter into those questions of pictorial photography on which it is so easy to be expansive. It is the second edition of the work; the first edition, published a few years ago, took only 566 pages, so that there has been considerable enlargement in the meantime. One feature of the work is a bibliography, which shows how vast a library has accumulated on photographic subjects, and another is a chronology, with, on the average, a discovery or invention or notable happening for every year since Tom Wedgwood. What a prolific writer, by the way, is Mons. Clerc himself. His writings on photography go back to the closing years of the last century, and here he is, as fresh as paint, with 1,000 pages up to date.

Map-making by Photography.

An American Society of Photogrammetry has recently been formed at Washington. It is intended to be a clearing house of information on the subject of maps made from photographs. Incidentally, it is surprising how many and varied are the uses to which photogrammetry is now being put, from the stereoscopic plotting of the details of a street accident to the mapping on the scale of 1 : 5,000 of the crater of a volcano. A camera built in Munich is now being used to take colour photographs on aeroplane surveys.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.



Effect of Stops.

If the lens is not in the correct position for giving a sharp image the picture will be fuzzy. How is it that a small stop will make it sharper? If the position is wrong, how can stops put it right? *R. R. (Hounslow.)*

In such a case the small stop does not necessarily put matters right, as you suggest, but it may make a considerable difference to the definition. In fact, if the error in position is only slight, and a sufficiently small stop is used, the definition may be quite satisfactory.

The diagram will help to make the matter clear. It is purposely exaggerated to show what happens.

A single point in the object being photographed is represented by O; the diaphragm in the lens is marked D; the plate is at A, but the lens is too near it, and is bringing the image of the point O to a sharp point on the plane B. The cone of rays of light passing through the stop has its apex at B instead of at A; therefore on the plate A the image will not be a point but a circle—the circle of confusion. The diameter of this circle is indicated by the part of the line A lying between the lines showing the boundaries of the cone.

In Fig. 2 the stop D is a smaller one, and therefore passes a smaller cone. It will be seen that the circle of confusion at A is much smaller than before, although the plane of sharp definition is still at B.

If B were nearer the lens than A, the effect would still be the same. The apex of the cone would fall on B, and the rays would then begin to diverge again, so that by the time they reached A they would form a disc instead of a point. The less the distance between A and B the smaller would be the disc, and with a small stop it might easily become a point.

Interior Exposures.

In the beginners' lessons mention has been made of the exposures for interior subjects. I have so far no experience of this work, but cannot understand why they are so long. Why should the inside of a church, for example, want sixty times the exposure for the outside of it? *R. S. E. (Tenby.)*

The outside of the church is receiving light from a vast area of sky, and this light is almost entirely excluded from the inside by the roof and walls. On entering some interiors when the light is brilliant outside, they seem very dark. After a time the eyes accommodate themselves to the weaker light, and the interior details become clearer and more easily visible; but there is a great difference between the power of the light inside and outside, even if the interior is well lighted by large windows with clear glass. The difference is much greater if the windows are small, low down, filled with stained glass, and obscured by buildings or trees.

There is another point to remember—the falling off of the light as we move farther from its source.

Imagine a long passage lighted by a single window at one end. An object one foot from the window may be nearly as well lighted as if it were outside; but at two feet it is receiving only one-fourth of that light, and at ten feet only one-hundredth of it. This in itself is a sufficient explanation of the necessity for long exposures with many interior subjects.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

TAKE IT IN *COLOUR!*

By H. E. GRIME.

A few remarks on the simplest of the colour processes concerning subject matter, exposures, cost, etc., from the beginner's standpoint.

SINCE the mosaic-screen types of colour transparency, such as Dufaycolor and Agfacolor, have been available in roll-film form I have exposed as many spools as rather limited means would afford. The results, to my own uncritical eyes, have been quite satisfactory, and I still like them in spite of their obvious faults.

The Attraction of Colour.

On my non-photographic friends, however, their effect has been astounding. Even those whose knowledge of photography should have taught them better looked upon them as little short of a miracle. The first question was, invariably, "How do you put the colour in?" But even after explaining that it was merely a matter of pressing the button they remained awestruck. They still get aching arms and cricked necks, holding them up to the nearest window.

The first talking picture, I am sure, caused less sensation in our little town than my bundle of colour photographs. Persons I had never spoken to before called to ask if they might take them home to show their wives. At my office, business was dislocated, and I was in bad odour with my boss until he, too, saw them and joined the admiring throng. I gained a quite undeserved reputation as an expert, which was highly amusing to the few real experts whom I know.

I quote this fragment of autobiography because I somehow think that many beginners are rather frightened of colour films. The fact is that if they will realise the limitations and observe the few simple rules, they will find that it is actually easier to produce good colour transparencies than the same quality of black-and-white prints. Of course, I do not suggest that colour films are more than a side-line, as it were, but still, they are a fascinating novelty, and are guaranteed to cause a minor sensation among "laymen."

Using Colour Films.

First of all, they are quite easy to handle, being loaded into the camera in the same way as an ordinary film. No filter is needed except when using artificial light, and the only "extra" is a safety cover over the red window to protect the panchromatic emulsion. There are six exposures only on the popular $3\frac{1}{4} \times 2\frac{1}{4}$ size of film, but those who, like myself, use $2\frac{1}{4} \times 2\frac{1}{4}$ will find it possible, with care, to squeeze eight exposures from the same length. Anything less than this last size I consider unsatisfactory, except for special requirements, which do not concern us here.

Exposures.

Correct exposure is even more important than with ordinary films. A black-and-white negative which has been wrongly exposed can, by the choice of printing paper, or by treatment of the negative itself, produce a passably good print. A colour film, on the other hand, must abide by the exposure, although there is a good deal of latitude in the emulsion. Over-exposure, which is rare, gives a "wishy-washy" result, lacking in contrast, whilst under-exposure, the most common fault, gives wrong colour values and produces effects that look quite unreal. Green objects, such as grass and vegetation, suffer greatly if the film is under-exposed, whilst blue is the colour which is least affected. A brown object may be almost lemon-coloured.

The makers give an exposure chart with each film, which should be used, and it may be checked by the use of the Burroughs Welcome calculator, using the light factor of $\frac{1}{4}$. It will be found, however, that except under really good conditions, exposures are quite long and a tripod or support for the camera is almost a necessity.

Subjects.

As for subjects, action photographs are more or less ruled out because of the length of exposure which is necessary. Still life is perhaps the best, and apart from the obvious, such as flowers and fruit, there are a surprising number of objects which will make good colour subjects. Portraits are quite good, but they demand a lot of care and can be embarrassing if one values the good opinion of the sitter. Landscapes, except where there is a lot of foreground, tend to be disappointing, and intensely blue skies should be avoided.

Clouds, of course, are quite charming, and have none of that "approaching storm" effect which a filter often gives to a black-and-white negative. Very strong sunlight, whilst showing all colours to advantage, also produces deep shadows, which tend to reproduce as an unpleasant purple.

One subject which I have found very satisfactory is a really good sunset which, if the exposure is shortened produces startling results.

The moderately high cost of these films has one advantage in that one is thereby extremely careful and exacting with each exposure. This may mean, on the other hand, that the colour film will remain in the camera for quite a long time during which many ordinary pictures are missed. Some method such as a reverse winding key, which enables the film to be taken out or replaced at any stage, will be found particularly useful.

Processing in the case of roll films is perhaps best done by the makers, although, again, the charges are quite high. Still, the finished results are handsomely mounted on card which makes them easy and safe to handle and they are accompanied by a criticism of the exposures by the examiner:

How to Look at Colour Films.

Examining the results can be quite an arduous business, as they have to be held up to the light to see them properly. To obviate this, a viewing-box can be made fairly easily. It consists of two wooden frames set at an angle like a retouching desk. A mirror is fixed into the base and a holder for the transparency above. If it is held so that the light passes through the film, the image will be reflected in the mirror and may be examined at leisure.

The best way of showing colour transparencies, however, is to project them through a lantern. The richness of the colour in a well-exposed example can only be fully appreciated in this way. The films will stand up well to the heat and light of the lantern, but it is unwise to leave them too long, a minute or two should be the limit, although I have left them as long as five minutes without apparent harm. It is better, perhaps, to use copies instead of the originals, if they are to be shown a good deal, as intense light undoubtedly has a deteriorating effect in time. Similarly, they should not be left too long in direct sunlight.

If there is one time of the year which simply shouts for colour treatment, it is that which is approaching now, when the leaves begin to turn. I hope that many of my fellow beginners will try to capture some of that brief autumn glory on a colour film.

NIGHT Photography *OUT-of-DOORS*

By HAROLD G. GRAINGER.

THE availability of increasingly rapid emulsions has played an important part in the popularising of night photography, not only indoors, but out-of-doors as well.

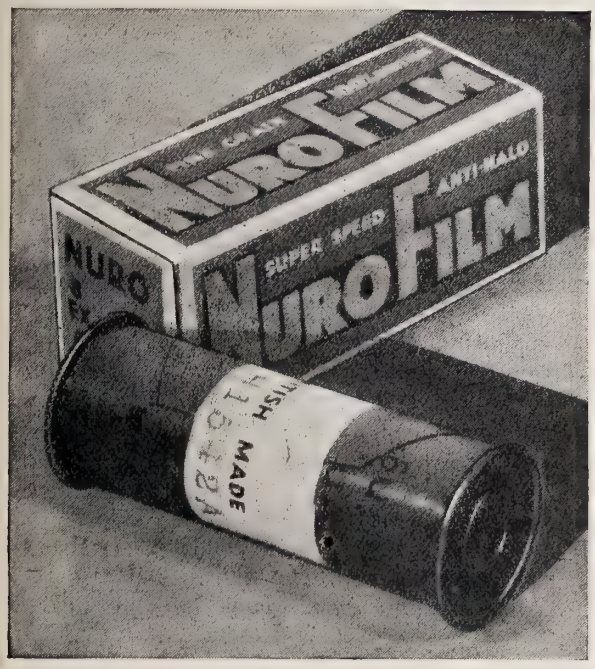
Possessors of apparatus embodying large-aperture lenses naturally enjoy extra advantages over those whose equipment is less expensive, for smaller lens apertures prohibit the inclusion of moving figures. Plenty of pleasure and satisfaction are obtainable, however, by those (the great majority, by the way) who, though only using economically-priced cameras, are able to discriminate in their choice of subject. Given suitable circumstances, plates or films of a speed of 2,000 H. & D. will permit snapshot exposures of 1/10th sec., and will yield negatives which, though thin, are of good printable quality, at apertures of f/4.5. It should be remembered, however, that if it is feasible for one to five seconds to be given, negatives are decidedly superior.

A street scene at Eastbourne. 20 secs., f/6.5. S.G. Pan.

The Fountain, Cheltenham Promenade. Orange light. S.G. Pan. plate. 6 secs., f/4.5.

As in ordinary photography, colour and darkness or lightness of tone of subject has an important bearing on the length of exposure necessary. Distance from the subject and the strength or power, as well as the colour of the illumination, must be taken into account.

Not only seaside resorts but some inland towns which specially cater for an influx of visitors appear to spare no expense in providing, in addition to the usual white lights, arrangements which show the subject bathed, in turn, in all the colours of the rainbow. Among the most beautiful examples is the fountain on Cheltenham Promenade, an illustration of which is given here.



Quite a different type of subject is the Eastbourne street scene. The source of illumination, the powerful lights of a cinema, were fortunately masked by intervening buildings. Here again the camera had to be used on a support to permit the exposure of 20 secs. at f/6.5 on an S.G. Pan. plate. Motors and buses were passing along the street during the exposure. This trouble was overcome by holding from time to time, as necessary, a letter wallet in front of, but not touching, the lens.

A paramount necessity if glare from lights outside the margins of the subject is to be avoided—a condition which inevitably causes serious loss of quality in the negative—is a lens hood. When plates are used they should be backed, not only because lights have to be considered, but contrasts in the subject are always steep.

Care is necessary in the development of negatives taken under such conditions. The type which gives the best print is one that might be called thin; this involves a shorter development time than usual.

The Bandstand at Night, Scarborough Spa. 3 secs., f/4.5. Eclipse plate.

Some Critical Comments on Nuro Film

Enthusiastic Amateurs give their opinions on the New and only entirely British Film . . .

EVERY day more amateurs are responding to the exceptional appeal of NURO Film. Testimonials from all parts of the country prove the enthusiasm with which NURO, the first All-British film, is being received.

Very Fine Grain.

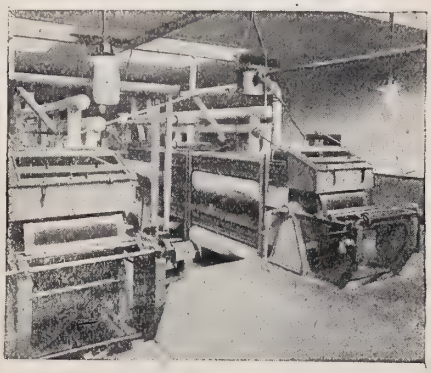
The extra-fine grain of NURO Film ensures that the smallest details and gradations of tone are captured.

L. B. (Edinburgh) writes:

"I am not backward in cursing products that I do not find satisfactory, so do not let me hesitate to commend you on your very satisfactory Roll Film. I have used during these last few months about two dozen and a half and I have had a larger percentage of good results both in electric light and daylight. . . . . I find the grain of these films of yours quite fine for enlarging up to full-plate size."

Consistently Good Results.

The possibility of error is greatly reduced with NURO on account of its greater latitude.



A. A. M. (Kelso) writes:

"I feel under an obligation to forward you the enclosed photographs. Unable to reconcile your claims in regard to the latitude of NURO Film with its very modest price, I subjected it to a very exacting test by exposing a 6d. film on one subject in a series of quick snapshots, allowing myself time to make, and note, changes in aperture and exposure settings. These varied from f/16 to f/6.3, and from 1/100th sec. to 1/25th sec. Thereafter the film was developed . . . and yielded, much to my astonishment, six very excellent negatives.

"Such consistent results have encouraged me to send you the results of my test."

EXCEPTIONAL LATITUDE.

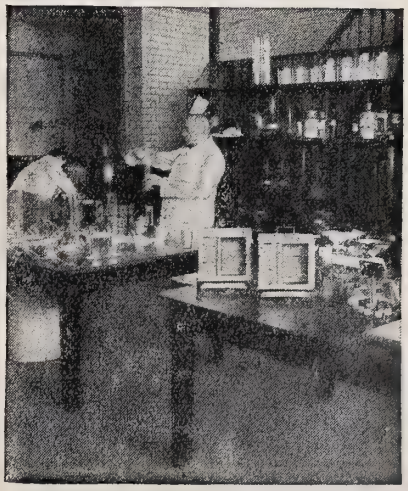
NURO'S "lastic latitude" with the greater variety of exposures it allows opens up fascinating, new possibilities to the amateur photographer.

Celluloid Casting Machines.

A. S. (Horley) writes:

"I should like to tell you how delighted I was with the results. They were exposed behind a focal-plane shutter, at exposures rating from 1/25th sec. to 1/80th sec., and although they were all exposed under very different conditions of lighting, the results were excellent in every way; gradation of tone was excellent, and none of the high-lights showed the slightest suspicion of clogging. Where figures were taken under trees, detail was in evidence in the darkest shadows. I must certainly congratulate you on putting such a remarkably fine film upon the market at such a reasonable price."

An Excellent All-round Film.



In their determination to produce a roll film a little nearer to perfection than any other, the makers of NURO have incorporated every feature which can help to provide the amateur with the film he has been looking for. (The speed is 27° Scheiner).

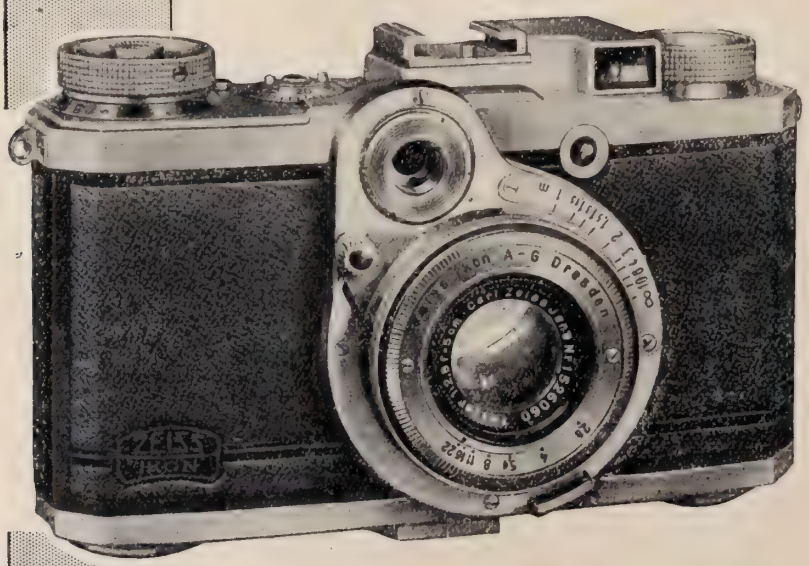
Made Entirely in Britain.

The production of NURO Film marked an epoch in roll-film manufacture. For the first time a British roll film is being manufactured throughout in this country, in British factories, by British workpeople, and using British-produced celluloid.

Obtainable through all branches of Boots The Chemists, Timothy Whites & Taylors, Taylors Dispensing Chemists, and from all progressive dealers.
STANDARD SIZES AND PRICES.

NURO (Biggleswade) LTD.
BIGGLESWADE, BEDFORDSHIRE.

The Research Laboratory. Every day samples of Nuro Film are tested to ensure maintenance of NURO quality.



S.B./T2. [Advt.

Another Zeiss Ikon "Miniature"!

"What ! another Zeiss Ikon miniature," we hear our friends say. Yes, we believe that the miniaturist should have as large a choice of instruments as the devotee of the larger size cameras. That is why we are now introducing the Nettax to our range of miniature cameras.

The Nettax completes the Zeiss Ikon range of "miniatures." It is a beautiful instrument, and the body is shaped somewhat similarly to that of the Contax II, with chamfered corners and chromium finish. All the controls are situated on top of the camera, and the whole range of shutter speeds from 1/5th to 1/1,000th of a second are visible on one dial, in the centre of which is conveniently located the shutter release. No external parts move during exposure.

NETTAX

The Nettax, although not as versatile as the Contax, nevertheless provides a choice of wide-angle and long-focus Zeiss lenses, and focussing is performed by a coupled distance meter. The back of the Nettax is detachable for cleaning and permits use of a plate back.

The Nettax, on account of its somewhat simplified construction, is more moderately priced than the Contax, but nothing has been sacrificed in respect of quality of workmanship.

Ask your nearest high-class camera dealer to demonstrate the Nettax. Name of nearest stockist on request. A new publication dealing with all Zeiss Ikon miniature cameras—Contax, Nettax and Super Nettel—has just been published, entitled "Unfettered Photography." Copies free on application.

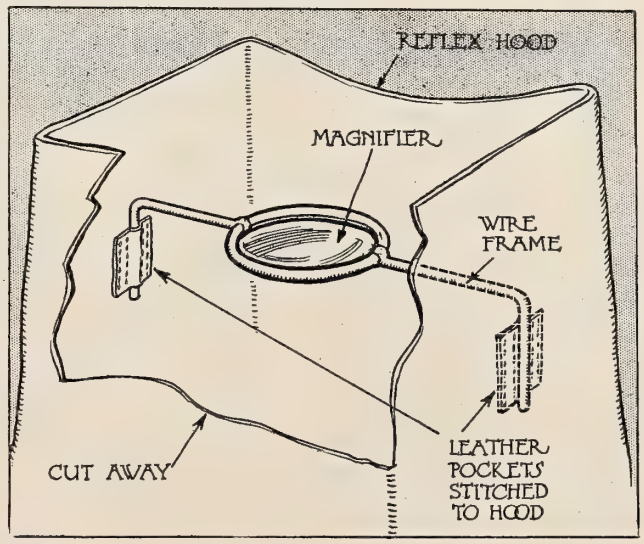
ZEISS IKON

ZEISS IKON LTD.

11, Mortimer House, Mortimer Street, London, W.1

Readers' Hints, Tips and Gadgets

A SINGLE LENS MAGNIFIER FOR THE REFLEX.

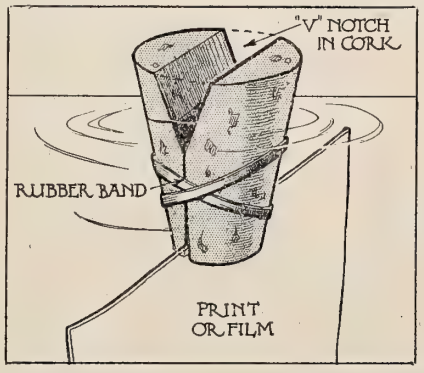


THE device described and illustrated here costs little and is easy to construct. As will be seen, it uses but a single lens like those in the miniature reflexes, and takes up less room than the larger proprietary makes and, of course, can be adapted to suit individual requirements.

The first thing to do is to measure the distance between the eyes in the customary position and the ground glass in the hood, and then take along a piece of news print or something similar to the local optician or stores and choose a lens that will suit the sight and give correct focussing for this distance. If an old spectacle frame is available, the lens can be fitted into this and a piece of wire soldered to each side, as shown in the illustration. Failing the convenience of a spectacle frame, a piece of thin three-ply wood is easily cut to suit and will be quite strong enough for hard wear.

The easiest and most practical way of finding the correct distance is to focus on a pencil mark on the ground glass with the camera pointing to the sky or some blank white object. This prevents confusion that might arise if the magnifier were focussed on the usual subject matter with varying planes.

Find the best position in this way between the eyes and ground glass for easy focussing, and sew a small leather loop on either side of the lens at this distance. The magnifier and frame is then slipped in and out when required.



D. ALDWYN JAMES.

FLOATING GRIPS FOR PRINTS AND FILMS.

THE gadget described affords a very practical method of suspending the print or film in the water while it is washing, where deep dishes are available.

It consists simply of a large bottle cork and an elastic band. Cut the cork down the centre and then make a chamfer on the top inside edges to form a fairly deep V-cut, as shown. Next place the two pieces together again and twist the elastic band round the lower portion sufficiently tight to grip a piece of paper and to keep the two pieces in place. It will be found easier to cut the cork if the knife is sharp and dipped frequently into water. By this means a straight, clean cut is obtained, and no pieces are torn out of the middle of the cork, which would spoil the grip.

For small contact prints it is better to grip them in the middle of one edge than to use the corner only. For larger prints, and also for shallow baths, prints can be kept afloat, face downwards preferred, by means of two corks, one on each of the opposite sides of the print. It has been found practical to float an entire length of roll film by means of two of these corks, one each end, and kept apart by a thin wire cut to a suitable length. In this way the film should be floated face downwards to allow the hypo present in the emulsion to sink to the bottom of the dish. G. B. WEIR.

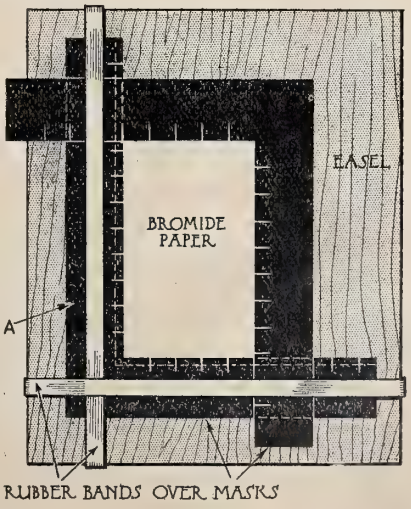
ADJUSTABLE PAPER-HOLDER AND FRAME.

IF your enlarger is not fitted with a masking carrier, the following provides a simple method of obtaining prints with white margins from any particular portion of a negative, as well as providing an adjustable holder for any size of paper.

It does away with the necessity of cutting special negative masks of varying sizes when the portion to be enlarged is at variance with the paper size used.

Cut three angles from a piece of stout cardboard. Make them an inch or two inches wide and about two inches longer than the largest size of paper to be used. From one of these, trim off the width of white margin desired, and glue it down underneath angle A so as to form a rebate. This rebate is indicated by the dotted line.

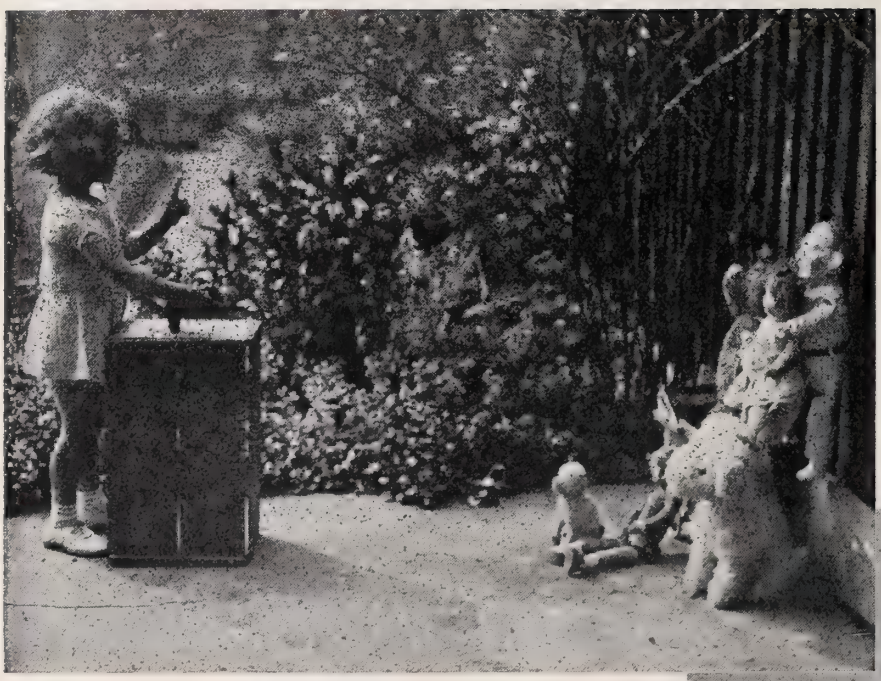
If there is any doubt that the cardboard is opaque, it is advisable to treat it with dead black, or face it with the black paper from a packet of bromide paper. In fact, the black face will be found to be very helpful when choosing the best portion of the negative, as the black absorbs the surrounding image and so allows one to concentrate on the most suitable area.



Then mark off in sections of, say, 1 in., as illustration. White ink or paint will be easily discernible in the dark-room. Pin this with the rebated side flat to the easel in the form of a letter L.

It will be found that suitable wide elastic bands, ½ in. in width, stretched round the easel will allow the angles to be moved freely and yet grip them sufficiently tight while printing.

The remaining angle is inserted beneath the rubber bands where it can be freely adjusted so as to include exactly what you desire.



It is important to mark off the measurements correctly on the fixed angle or the picture will be out of square.

P. WALSHAM.

CHILDREN

By R. MOORE.

" Look pleasant, please."

ONE can imagine no better settings for pictures of children than gardens or parks. Of the two, gardens offer the better opportunities for photographic child studies, as the comparatively confined space compels the youngsters to " slow up a bit," for in parks and large open spaces healthy children naturally run and scamper all over the place.

Given a beautiful garden and one or two pretty children one would suppose that an hour spent with the camera would result in dozens of excellent pictures. But although a number of happy souvenirs can easily be secured, outstanding pictures are usually the result of careful planning, a deal of cunning, and an inexhaustible supply of patience.

The difficulties of this work in the average suburban garden are perhaps not apparent until one gets to work, for although the garden may abound in delightful settings, there may be an equal number of bad ones. One has to avoid wireless poles, brick walls, dust-bins, and other unpicturesque adjuncts of most suburban gardens, and the success of our pictures depends upon our ability to entice the children to the right settings.

This is why I mentioned cunning, for children often have to be coaxed into poses by really shameful and deceitful ruses. Unless you had actually assisted in arranging the picture " Great Expectations," and had personally fixed the pin to the piece of string and sat those two infants down to fish, you cannot realise the pangs of a guilty conscience, the shame of deceit. I even placed a jam jar ready to receive their catch. Nevertheless, I shall be forgiven when they grow up and they count this picture as one of their cherished possessions.

Bubbles.

The Rose.

Of course, if it is possible, it is always best to photograph the children entirely unposed, and, by " stalking," some very charming pictures can be secured. But it will be found that the quickest plan is to pre-arrange a setting, choosing a suitable background, and then enticing the models on to the " stage." Have the camera on a tripod ready focussed and shutter set so that one is free to play with the children until the required interest is aroused in their " staged " occupation, and then, stepping back, release the shutter.

Children are born natural imitators, and a very good scheme is to act just as you

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

n the GARDEN

wish the child to do, and in ninety-nine cases out of a hundred it will say " May I do that ? " For instance, if you want a child to sit on a box and blow bubbles, place the box and camera in position, and then sit on the box yourself and indulge in a few minutes' legitimate bubble-blowing. The child will soon intimate that you are encroaching upon its rights, and will want to take your place. Then is your opportunity.

Inland Waters.

Great Expectations.

" The Rose " was secured in this manner. It was only necessary to have the camera set ready on the tripod, and then casually walking by the flower I stopped to smell it, and, without a word, my little model followed suit. In such cases it is essential not to miss the first pose, for a child will not so successfully repeat it, if at all.

In the case of " Look pleasant, please," the little girl was actually allowed to take a photograph, and she is now the proud possessor of her very own snap of her dollies. Of course, this is running a certain amount of risk unless you are confident the child will not tamper with your camera should she find it lying about later on.

Such realism, where possible, greatly helps the photographer in his co-operation with his little models on future occasions.

Assistants are, of course, useful at times, provided they work strictly to your instructions. Tell them exactly what you are after, otherwise they may attract the child's attention just at the critical moment. In the majority of cases, however, it is better to work single-handed. There is no attempt at fussing then.

A final word—if you are photographing a child, especially a very young one (and decidedly if it is a baby) in the *back* garden, see that its mother is keenly interested in the flowers in the *front* garden. Your chance of success will be greater then.

And another final word. Whatever the delays, mistakes, disappointments and bad shots—and you cannot possibly hope to escape them—keep your temper, or at any rate keep up the appearance of doing so. An atmosphere of care-free jollity is essential ; the whole thing must be taken as an opportunity for some rare fun. What a lark !

Water Flowers.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS

The latest winner of the Wallace Heaton Weekly Competition is N. G. Baguley, 11, High Street, Kenilworth, who has received an award of 21s. Full particulars of this competition will be found in our advertisement pages.

The Kentish Town Camera Club commences its winter session on Thursday, September 24th, at the Kentish Town Men's Institute, Holmes Road, N.W.5. The Club possesses a well-equipped dark-room, and apparatus and materials are available for the use of members. Full particulars can be obtained from the Hon. Secretary, Mr. T. Carey, 36, Fallow Court Avenue, North Finchley.

It is proposed to form an amateur film society in the Streatham district. The members will have an excellent start, for the Dyson Studio is being placed at their service. Any one interested is invited to write to the Secretary, Dyson Studio, 119, Mitcham Lane, S.W.16.

A new Circle of the Leica Postal Portfolios is now being formed for the circulation of large prints (maximum size 15×12 in.). Leica readers of "The A.P." can obtain a copy of the rules by applying to the Hon. Gen. Sec., Mr. A. Greenslade, 115, Worple Road, Wimbledon, S.W.20.

Readers in the vicinity of Stoke Newington and Upper Clapton in London who are interested in miniature photography are cordially invited to join the new miniature club which has just been formed in that district. Full particulars from the Hon. Secretary, Mr. C. C. Stewart, 7, Alcester Crescent, Upper Clapton, London, E.5.

The Harrow Camera Club have for the coming winter season again organised a comprehensive series of demonstrations and lectures for both beginners and advanced workers, and cordially invite all keen photographers in the district to their meetings on Tuesday evenings at the Conservative Hall, Lowlands Road, Harrow. The season begins with a talk by James Jarché on Press Photography on September 15th.

Readers who contemplate using the dark-room lighting circuit given in last week's "Hints and Tips" page are advised, according to the I.E.E. regulations, to transpose the words "live" and "earthed" given for the mains connection.

A photographic club has recently been formed in the district of Hornchurch, Essex. Readers interested are invited to write to the Hon. Secretary, Mr. F. Buckley, 14, Woodhall Crest, Hornchurch, Essex.

On Sunday, September 13th, the photographic party of the Southern Railway ramble will visit the picturesque Avon valley and Stonehenge. The special train leaves Waterloo at 9.36 a.m. and arrives back in London at 9.16 p.m. The return fare is 5s. Leader, Mr. A. E. Daly.

THE R.P.S. EXHIBITION

This Exhibition will be held at 35, Russell Square, from Saturday, September 12th to Saturday, October 10th, both days inclusive. The Exhibition will be open from 10 a.m. to 9 p.m. on Mondays, Wednesdays, Thursdays and Saturdays, and from 10 a.m. to 6 p.m. on Tuesdays and Fridays.

The following lantern lectures will be delivered on Tuesdays and Fridays during the exhibition at 7 p.m.

Tuesday, September 15th.—"Southward Bound." Records of a Cruise to Dalmatia and the Mediterranean in Dufaycolor and Kodachrome. By Frank R. Newens.

Friday, September 18th.—"The Cream of Cornwall." By Dr. P. Habberton Lulham.

Tuesday, September 22nd.—"The Scope for Photography." By Olaf Bloch.

Friday, September 25th.—The Lantern Slides accepted for the exhibition will be projected on the screen.

Tuesday, September 29th.—"Hill Cities of Tuscany and Umbria." By W. I. Croome.

Friday, October 2nd.—"Fès the Mysterious—the Inviolate City of Morocco." By James Shaw.

Tuesday, October 6th.—"Stories from Nature's Wonderland." By Oliver G. Pike.

Friday, October 9th.—"The Private Life of a Roll Film Spool." By H. Baines.

Seats for these lectures may be reserved in advance at a charge of 6d. each, but seats so reserved must be occupied by 6.55 p.m. Admission to the exhibition is free.

The Society issues two publications in connection with the exhibition—the Illustrated Catalogue, price 1s., by post 1s. 3d., and "The Year's Photography," containing a selection of pictures from the Pictorial, Natural History and Record Sections, reproduced in photogravure, price 2s. 6d. paper cover, by post 3s.; cloth bound 5s., by post 5s. 9d.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, September 9th.

Solihull P.S. Competitions. "Landscapes or Seascapes."
Stockport P.S. "Autumn Photography." P. S. Wilkinson.
Stretford C.C. Monks Heath. Mr. Higgins and Mr. Howard.

Thursday, September 10th.

Bury P.S. Annual General Meeting.
Camberwell C.C. Oil Pigment Demonstration. J. H. Clark.
Hammersmith H.H.P.S. Discussion on Prints. By Five Members.
Liverpool A.P.A. Informal Meeting.
N. Middlesex P.S. Schoolboys' Holiday Film. C. J. N. Redfern.
Oldham P.S. "How I make my Exhibition Prints." F. W. Ferguson.
St. Helens C.C. Evening Ramble to Shaley Brow.
Stretford C.C. Portrait Portfolio. Longworth Cooper.

Friday, September 11th.

Sheffield P.S. (Portrait Group). General Meeting of Group.

Saturday, September 12th.

Bath P.S. Lacock. G. E. Gibson.
Beckenham P.S. Otford. F. H. Elliott.
Bolton C.C. Hall-i'-th'-Wood. Leader, S. Lomax.
Bournemouth C.C. Outing to Kinson and Longham.
Bristol P.S. Stapleton Glen.
Hull P.S. Lincoln (Day Excursion). L. Kirk.
N. Middlesex P.S. Saturday Outing to Hampton Court. E. F. Fincham.
Northampton N.H.S. Hazelborough Woods.
Sheffield P.S. Longshaw. Miss L. E. Chapman.
Southampton C.C. Outing to Compton. R. W. Pyne.

Saturday, September 12th—(*contd.*).

S. Suburban and Catford P.S. Outing to the Temple. A. E. Marden.
Walthamstow and D.P.S. St. John's Church and Gate.
Woolwich P.S. Chislehurst and Caves. Leader, Mr. Boon.

Sunday, September 13th.

Blackpool and Fylde P.S. Littledale via Caton.
Borough Polytechnic P.S. A Ramble in Essex. Captain A. G. Buckham.
British Photographic Fellowship. Windsor.
Ipswich and D.P.S. Whole-day Outing to Blyth Valley and Suffolk Coast.
Luton and D.C.C. Little Brickhill. W. H. Harle.
Worcester C.C. Bredon.
York P.S. Knaresborough and Plumpton Rocks.

Monday, September 14th.

Bolton C.C. Council Meeting at 7.30.
Oldham Equitable P.S. "How I make my Exhibition Prints." W. Miller.
Southampton C.C. Outing for Night Photography—Preliminary Talk. R. T. Bruton.
Walthamstow and D.P.S. Pathé Ciné Demonstration. Miss E. A. Miller.

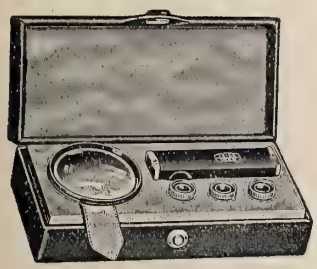
MINIATURE CAMERAS OF DISTINCTION *By R. G. LEWIS.*

As is generally known, the firm of R. G. Lewis is the only one of its kind specialising exclusively in miniature apparatus. We stock every miniature camera of repute. Besides the cameras themselves, we have about 500 accessories for the Contax and a similar number for the Leica. We also stock every accessory for the Rolleiflex, Exakta and Super Ikonta, all fine-grain developers and every type of miniature film.



THE CONTAX

Of the Contax it may fairly be said that it anticipates and serves as a pointer to future miniature camera design. Unique features of the Contax as a 35-mm. range-finder type camera are its ability to take plates, its record maximum shutter speed (1/1,250th sec.), the f/1.5 Sonnar lens with which it may be fitted, and in the case of the Model III, illustrated, the built-in electric exposure meter. Interesting points about the camera include the range-finder and view-finder combined in one aperture, the delayed-action device in the shutter, and the really amazing system of accessories which make the camera adaptable for all specialised photographic purposes. Of this system space permits us to illustrate three accessories only (we would draw special attention to the Contameter, another unique Contax device), but we would suggest to any customer considering the purchase of a Contax that a call at our showrooms, where the full range may be demonstrated, would be repaid. We believe that we were the first people to realise that the Contax was a camera with a great future, and, as such, are in a position to pass on to the public that little extra experience we have gained.

THE PLATE BACK

For scientific or research purposes it is frequently desired to make only one or two exposures, or to use sensitive emulsions unobtainable in film form, i.e., infra-red or other specially sensitised plates. This is where the plate adapter—with its extreme simplicity of operation—becomes particularly useful. The standard back of the Contax is removed and a second back, carrying the plate adapter, slid into its place. Price of adapter with one holder for plates 30×45 mm., £4 12s. 6d.

THE CONTAMETER

This ingenious optical device makes it possible to photograph objects very close to the camera without a tripod—instantaneous exposures can be made with the camera held in the hand. It can best be described as a kind of distance meter, comprising interchangeable prisms by means of which it can be set in focus on the distance corresponding with the supplementary lens in use. Price of complete equipment for 20, 12 and 8 in., in case, £10 5s.

THE SPECIAL COPYING STAND

This instrument is especially adapted for making copies of flat originals and photographs of small objects same size or slightly reduced. Setting notches are provided for semi-automatic focussing over the range of degrees of reduction. The ground-glass screen of the adapter can also be used for focussing. The use of extension rings for the different degrees of reduction do away with the necessity for using supplementary lenses. Copying can also be carried out by daylight. Price £6 5s. Wooden case 10s. 6d. extra.

OUR UNIQUE PROCESSING SERVICE FOR THE MINIATURE CAMERA USER

In last week's *Amateur Photographer* we described the methods by which we ensure that in processing Leica and Contax films we are able to produce from them results that are as good as the present stage in the development of the chemical side of photographic technique will permit. This week we propose to say a few words about printing.

We make two kinds of enlargements from 24×36 mm. negatives: "Enprints" and first-quality enlargements. Enprints are enlargements from the whole of the negative on single-weight paper, velvet or glossy. First-quality paper is of course used, but no spotting or shading is done, as enprints are chiefly intended for record purposes. The prices of enprints are 2s. per dozen for 3½×2½ size and 2s. 6d. per dozen for the 4¼×3¼ size.

For our first-quality work we have in normal use fifteen different kinds of bromide papers. General favourites are Kodak Fine Grain Royal, Kosmos Cream Matt, Agfa Brovira Pastel and Ilford Silk Finish Rayon. We are quite willing, of course, at any time to employ for a customer's work any special kind of paper that is available in Great Britain. Our "first quality" work is first quality in every sense of the term. Enlargements are carefully spotted and shaded, and, where we are asked to do so, we are always pleased intelligently to select and enlarge from portions of the negatives. Prices of first-quality enlargements are 3s. 6d. per dozen for 4¼×3¼ size (quarter-plate), 5s. per dozen for 5½×3½ size (postcard) and 7s. 6d. per dozen for 6½×4¾ (half-plate). No extra charge is made for double-weight paper, and we always advise this. Customers are asked to mention when writing whether they prefer their prints with or without white borders.

THE FOLLOWING CAMERAS REPRESENT A VERY SMALL BUT TYPICAL SELECTION OF OUR SECOND-HAND STOCK. WE HAVE A LARGE CHOICE OF SECOND-HAND LEICAS, EXAKTAS, AND ROLLEIFLEXES. ALL ARE FULLY DESCRIBED IN OUR WEEKLY LIST, WHICH WILL BE SENT ON REQUEST. A GUARANTEE OF OPTICAL AND MECHANICAL PERFECTION ACCOMPANIES EACH CAMERA.

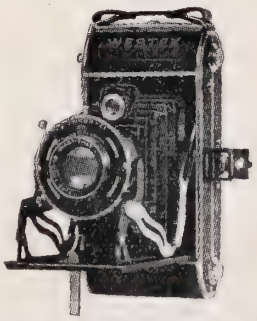
Contax Model II, f/2.8 Tessar lens, indistinguishable from new	£34 10 0
Contax Model II, f/2 Sonnar lens. Indistinguishable from new	£39 15 0
Contax Model I, wedge-type range-finder, f/3.5 Tessar lens, ever-ready case. New condition	£22 10 0
Contax Model I, wedge-type range-finder, f/2.8 Tessar lens, ever-ready case. As new	£24 10 0
Contaflex, built-in exposure meter. The most complete camera made, fitted f/2 Sonnar lens. Indistinguishable from new	£55 10 0
Super Ikonta 530/16, f/2.8 Tessar lens, ever-ready case. As new	£23 17 6
Super Ikonta 530/16, f/3.5 Tessar lens, ever-ready case. As new	£20 17 6
Super Ikonta 530, f/3.5 Tessar, normal Compur. As new	£13 10 0
Super Ikonta 530, f/3.5 Tessar, Compur Rapid, ever-ready case	£14 17 6
Super Ikonta 530/2, f/4.5 Tessar, Compur. As new	£13 15 0
Super Ikonta 530/2, f/3.8 Tessar lens, Compur Rapid, ever-ready case. As new	£18 15 0
Ikonta Model 520, 16 on 3¼×2¼, f/4.5 Tessar lens, Compur. As new	£7 17 6

"PHOTOGRAPHY AND THE ART OF SEEING"

This excellently translated and well-reproduced book in our opinion supplies a long-felt need. As the author himself mentions in the preface, "the artistic quality of a photograph is a function of the 'art of seeing'." Not everybody possesses this faculty, but this book will most certainly contribute largely towards cultivating it. Price 10s. 6d.

OUR MINIATURE CAMERA REPAIR SERVICE

We are now able to place at the disposal of miniature camera users a well-equipped repair department. Repairs to miniature apparatus call for a high degree of technical skill, long experience and many special tools. Previously, damaged or expensive cameras usually meant waiting weeks—often months—while they were returned to Germany. We can now undertake practically any repair and return the apparatus within a few days. Repairs to miniature cameras only can be undertaken.



R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

COVERS THE WHOLE FIELD

"Everything Photographic—Ciné and 'Still'." And you may interpret these words as fully as you like. In fact, there are literally scores of things photographic that can be got **only** at the Westminster; nowhere else. Go to the Westminster, therefore. You cannot do better; in EXCHANGING and BUYING OUT-OF-INCOME, especially.

Incomparable WESTEX Roll Film Cameras

Still Unbeatable.

"WESTEX Four-Five"

8 or 16 on normal 3¼×2¼ film. Very highest quality in every detail. Superb f/4.5 anastigmat, giving exceptionally fine definition, in focussing mount, delayed-action Prontor II shutter, 1 to 1/150th sec., T. and B. Sturdy all-metal body, plated edges, best leather covering and bellows. Quick self-erecting front. Optical direct-vision and brilliant waist-level finders. Hinged easy-loading back, panchromatic safety windows. Easy and delightful to handle, yet suitable for the most advanced work anywhere. By far the best all-round value offered. Obtainable only at the Westminster..... **£4 : 8 : 9**

Nine monthly payments of 10/5.

Velvet-lined Leather Case, 6/9 extra.

"WESTEX Junior"

Takes 8 pictures 3¼×2¼ on standard film. Fine f/6.3 anastigmat in focussing mount. Self-erecting front, ready at a touch, direct-vision and brilliant finders. Quite unparalleled at its price **42/6**

Nine monthly payments of 5/3.

NEW WELTUR

Built-in Range-finder and View-finder combined.

Takes 16 2¼×1¾ on standard 3¼×2¼ spool. High-precision camera with self-erecting front and every up-to-date refinement at moderate price.

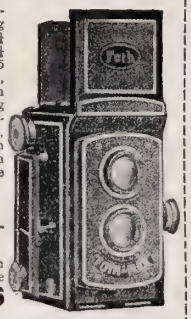
F/2.9 Radionar, normal Compur shutter **£17:17:6**

Nine monthly payments of 41/8.

F/2.8 Zeiss Tessar, ditto **£22:19:6**

Nine monthly payments of 53/7.

Compur Rapid shutter, 28/6 extra.



Astounding Value... FOTH-FLEX with 2.5 lens

Ultra-efficient twin-lens reflex, taking 12 pictures 2¼×2¼ on normal 3¼×2¼ film. With f/2.5 Foth anastigmat, automatic film counter, focussing magnifier, focal-plane shutter, 1/25th to 1/500th sec. and Time, with delayed action. Price only

£13:10:0

Nine monthly payments of 29/4.

Also with f/3.5 Foth anastigmat, as above at.. **£10:7:6**

VOIGTLANDER BESSA Now has Built-in Range-finder

Takes 8 pictures 3¼×2¼ or 16 2¼×1¾ on standard 3¼×2¼ film.

New design baseboard, ensuring enhanced rigidity. Unique trigger release under baseboard. Yellow filter permanently attached in folding mount. Quick self-erecting front, depth-of-focus scale.

F/3.5 anastigmat, in delayed-action Compur shutter, 1 to 1/400th sec., T. and B..... **£16:10:0**

Nine monthly payments of 38/6.

F/3.5 Skopar anastigmat, shutter as above..... **£18:15:0**

Nine monthly payments of 43/9.

F/3.5 Heliar anastigmat, shutter as above..... **£21 : 0 : 0**

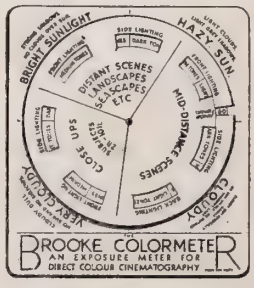
Nine monthly payments of 49/-.

In latter model range-finder and view-finder are combined.

ENSIGN MAGNAPRINT

Midget Size.

F/6.3 Ensar enlarging lens, specially designed condenser for enlargements up to 15×12 in., chart giving various sizes. Takes Leica, Contax and all miniature negatives, also half-V.P. and others. Complete with electric fitting. Less lamp. Also special model for Standard Leica lenses.

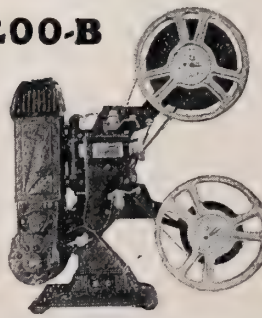


Either model **£4:10:0**

Nine payments of 10/7.

● BROOKE COLORMETER

New EXPOSURE CALCULATOR for KODACHROME and other Cine Colour Film. Simple and reliable in use. Slips into any pocket. Get one to-day. PRICE **8/6**



PATHESCOPE 200-B

9.5-mm. Projector

Fitted with highly efficient 200-watt direct lighting system, giving a brilliant screen picture 10 ft. wide. Flickerless projection. Very compact. Fan-cooled and asbestos-lined lamp-house. Simple threading. Universal tilting movement. Motor rewind, for use on A.C. or D.C. supply, complete with lamp and motor drive for use on 100-volt circuit, 300-ft. empty reel and flex..... **£15:0:0**

Nine monthly payments of 35/-.

Resistance for use on voltages 200 to 250, extra.... **£1:15:0**

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCL.

Mr. L. W. OFFORD.

From information communicated to our Special Representative.

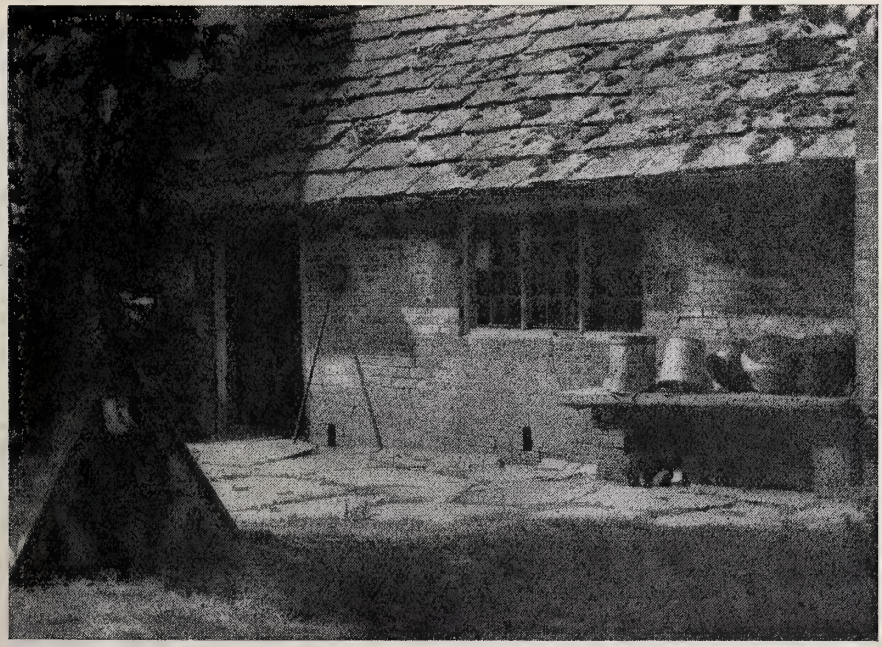
"MY idea of a picture is something which may be hung on the walls of a room and give permanent pleasure; a pretty good test, and difficult to live up to. This idea certainly rules out photographs of such things as a piece of cotton, two hairpins and a banana, grouped gracefully, with spotlight complete.

"I am convinced that a picture is born at the moment of exposure. If one does not visualise the finished print, and how it will be presented, at that moment, the probabilities are that the negative will never be used with much success. As soon as I see a subject that appeals to me I take it quickly; then think about it, study it, and take it again. Many a good opportunity is missed by not taking a subject promptly, and hesitating too long in consideration.

"I find my Rolleiflex a great help in this respect; the stop, shutter and focus can be adjusted in a few seconds. The negatives are on the small side, and need taking care of if 15×12 enlargements are to be made without trouble. I use Isopan film, and with suitable development I find that a 2¼-in. square negative will enlarge to 15×12 in. on contrast Royal bromide without a sign of grain. This is not an advertisement, but praise where praise is due.

"When I have obtained the negative the next important step is to see that the print reproduces to others the exact effect that appealed to me at the time of taking the negative. Now, very often the picture one sees, and attempts to photograph, *is not there at all*, as one soon discovers on printing the negative. The *thing* you have photographed appealed to you at the time because perhaps you saw only certain things in it; or your mind conjured up a picture knowing the story of the place; or it may have been the peacefulness, sombreness and so on that made an impression. Small wonder, then, that when your prints present merely the stark facts you are disappointed.

"My object then is to try to get into my prints the *feeling* as well as the facts. And what is the method? It is not easy to answer that. It must necessarily differ with every print; but one thing is certain—you must know what you are aiming at. Like the artist, if you are not certain of what you wish to convey in the print you cannot make a good picture, though you may make a perfect print.



"I use all sorts of methods to try to get the print I am aiming for, copy negatives, paper negatives, multiple printing, and even bromoil. Feeling is obtained by accentuating the effect aimed at, and subduing all things not helpful to that effect.

"If the peacefulness of the subject is the main idea in view, simplify and simplify again; take out all the 'fiddling' things, and keep the print soft. If sunshine is the theme, rich deep shadows and brilliant high-lights make the sunlight sing!

"There is a great difference between a straightforward record and a really pictorial photograph.

"This article should really be entitled 'How I *try* to make my Exhibition Pictures.' It is difficult to live up to one's ideals. In other words, control is not easy, but it is great fun; and occasionally, when your print stirs the same feeling in a friend as the original inspired in you, you feel that, after all, the failures have been worth it."

(A further example of Mr. Offord's work is reproduced on one of the centre Art pages.)

FARMHOUSE BACKWAY. *L. W. Offord.*

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"AN OLD DOORWAY," *by C. F. Lonsdale.*

THE effect of evening sunshine is very attractively recorded in this picture, and it is interesting to note how the angle at which the light is falling tends to stress the details of the architecture and the texture of the wall, while the introduction of the figures lends a touch of human interest that considerably enlivens the literary content.

Almost inevitably, the figures assume pride of place as the centre of interest. The doorway may be indicated by the title, but it does not follow that the title indicates the motive, for, in other circles, it has become a fashion to call a picture after any quite subordinate incident, so much so that it was recently more or less creditably reported that an exhibitor was only restrained from calling a nude study, where the undraped figure was placed against a perfectly plain and nebulous setting, "The Red Shawl," by the frank and very pointed comments of his less sophisticated colleagues. However, in this example, the doorway does exist, and indeed is quite an important item, although, of course, it is outweighed by the greater attraction excited by the human element.

There is not much in it as far as placing is concerned, both figures and doorway occupying equally strong positions, with the doorway, perhaps, having a slight advantage on account of its proximity. But this is not sufficient to swing the balance over in its favour, for, apart from the human interest, the figures are presented in a depth of tone of appreciably greater weight and strike a much more forceful note.

Moreover, the contrast contained within the outlines of the figures is the greater. There is no light elsewhere so brilliant as that of their collars, nor is there a dark so intense as that of the garments the figures are wearing. Extremes of tone in conjunction create a considerable concentration of interest, and the greater the contrast the greater the attraction. On these several grounds, therefore, principality rests with the figures, and the doorway fulfils a secondary and quite subordinate function.

It serves to embellish the wall which forms the setting, and, indeed, its architecture lends it more than ordinary interest. Its attraction is enhanced by the play of light and shade upon it, an effect which also extends to the wall itself towards the left, where the shadow of an element outside the picture further diversifies the background and lends value to the sunshine. The shadow is useful, again, in that it establishes a connecting link between the two chief items of the subject material—the figures and the doorway—and it also links up with the lamp on the extreme left and above the figures. The connection confers a sense of cohesion upon the picture, and creates the necessary degree of unity.

But it also has an influence in imposing an order of precedence in the elements of the subject. The figures (1), as the chief centre of interest, are opposed by the secondary attraction of the doorway (2), but the opposition is dissipated or balanced by the introduction of the lamp (3).

In effect, it amounts to this. The doorway, in view of its position, size, and proximity, might possibly be held to conflict to some degree with the attraction of the figures. The eye would first be attracted to the figures, would pass from them to the doorway, and would not tend, despite the introduction of the intervening shadow, to return so quickly or inevitably as it should. With the inclusion of the lamp on the other side of the figures, another interest arises which attracts a certain attention and turns the balance over to the left-hand side. It takes from the pull of the doorway and enhances the attraction of the figures; or, put in another way, it turns what might have been a source of division of interest into a source of strength, by reason of the fact that the pull of the two elements, the doorway and the lamp, join to emphasise the figures lying in between.

Needless to say, it is scarcely possible that such a placing was consciously predetermined in this way. It is far more likely that the setting was first of all chosen and the figures waited for, the time of exposure being initiated by an instinctive appreciation that, at that moment, they seemed to be just where they ought to be, and appeared to fit in well with the rest of the subject.

It happened to fall out very well, and the composition makes up very satisfactorily, but, from the technical standpoint, the presentation suffers not a little from the indeterminate way in which the image is defined. A greater care in focussing seems to be needed, and, having regard to the slight depth of field, there should not have been any great difficulty.

"MENTOR."

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

THE means of moving about, whether by sea or land or air, have always proved a source of interest. It is an interest that is fostered, in our childhood, by toy trains, motor cars, and model boats as well as, nowadays, by aeroplanes and dirigibles. It persists as we grow up, and it is no wonder that such of us as are also interested in photography seek to portray something of that attraction that lies in most forms of mechanical transport.

Ships and Engines.

It is possible, with such material, to find subjects of considerable pictorial appeal, although, as a general rule, it is necessary to embody the elements or an effect of nature as the means. More often, however, the interest is topical or purely restricted to that innate in the material itself, and it is in this category that No. 1 of the prints reproduced on the opposite page—"Shunting," by Dr. K. B. Allan—happens to fall.

In this instance it is a railway engine that forms the centre of interest. It is well taken, and, apart from a slight excess of contrast in the rendering—a fault that could be corrected by the substitution of a softer grade of printing paper—it does not call for any serious criticism as far as the photography is concerned.

The engine and its immediate surroundings are sharply focussed, the exposure is well judged, and there is no visible trace of diffusion of the image arising from movement of the subject during exposure. It is questionable, however, if it were wise to allow the engine to be placed so low and so much in the corner of the picture. It would tell to much greater effect if it were higher up and more to the right or more "in" the picture.

Spacing and Movement.

Even if it were only a little bit farther back it would claim a greater share of the attention, but it would be better still if it could be placed on the right-hand side of the picture so that more space were shown in front of it than behind.

The idea is that the greater space in front conveys a suggestion of motion. It seems to give a moving object space to move in the direction it is going, and, whenever possible, the point should be kept in mind when the portrayal of objects in motion is essayed. No. 4, "The 5.30," by H. Parker, provides an instance. The engine, here, is too centrally placed, and its position should be corrected by trimming three-eighths or half an inch from the right; but, even as it stands, it conveys a better sense of motion than No. 1, and this simply because it shows a relatively greater space in front.

The workmanship, too, is better, and the tonal harmony achieved compares favourably with its predecessor, there being less of a suggestion of "soot and whitewash" about it.

It is good clean work and provides an excellent record of the miniature train. No. 2, "Modern Transport," by D. J. Reece, seems slightly underprinted, but is otherwise equally good, and, here again, the illusion of the possibility of movement is sustained by the fact that there is more space in front of the machine than behind.

Angle of View.

The shape of the machine is nicely disclosed, a feature which is attributable to the fact that it is seen from a three-quarter point of view. This applies to most things, and not only in this instance, but the placing of the engines in Nos. 1 and 4 also shows the wisdom of choosing this angle for viewing such subjects.

Another aeroplane, but a diminutive model this time, also forms the subject of No. 6, "About to Take Off," by R. H. Donaldson. Here, again, the machine is seen from a three-quarter point of view, more inclined to broadside, perhaps, but still one that shows both front and side. It may not quite convey the same suggestion of the streamlined grace of form of No. 2, but this is not altogether due to the line of sight, as the two types of machine differ appreciably, and No. 6 has scarcely reached the same stage of development as the other.

But, as far as the beauty of shape is concerned, there is little that can compete with a racing yacht. The fact is evident from No. 5, "In Dry Dock," by C. J. Henderson, where the fine sweeping curves of the hull are shown to advantage. The angle of view is well selected, but, for similar reasons to those already outlined, it would have been better if it had been found possible to allow more space in front of the bow than at the stern.

Subject and Environment.

The boat may be stationary, but, whether moving or at rest, the same feeling persists concerning the manner in which it should be placed.

It is something of a pity, too, that the environment was so scrappy and inclined to fussiness. A dry dock, of course, is seldom characterised by any attractiveness of shape, and it must be admitted that there was little hope of securing anything much better. A higher viewpoint might possibly avoid that very busy sky-line, but it would probably be found that, if anything of the sort were attempted, something of the beauty of line of the vessel would be lost.

The root of the matter is that boats, like swans, are best seen in their natural environment, and, on land, they never attain the same appeal as they do on the water.

Similarly with aeroplanes; the best setting that can be chosen for them is the sky, but to get them in anything like a decent scale when they are actually in flight takes a bit of doing, and not only is it necessary to employ a very high shutter speed to avoid blurring of the image, but it demands a very nice judgment as to the moment for releasing the shutter, and considerable rapidity of action.

Another Problem.

In the case of a subject like No 3, "R.M.S. *Queen Mary*," by L. J. Parris, the problem is of a different order. The size of the vessel demands a very distant point of view, which, if she is at rest or approaching a harbour, is not easy to find.

Here, it seems evident that it was not possible to arrange for the whole of the vessel to be included, and, in such a case, it is not the bow that should be sacrificed, but the stern. The loss would be felt, of course, but the effect would be better if the stem were visible, for all the lines seem to lead to it, and there is a decided impression of failure about a rendering in which it is omitted. "MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

A NOTE ON FILTERS.

IN the issue of August 19th there was an article on filters. It gave a great deal of useful information, and I am supplementing some of the hints then given by a practical example.

Many beginners become uneasy if they are not using filters. They find that the most successful photographers use them as a matter of course, and they conclude that they are handicapped by neglecting this aid to good results. They are quite right. A great many subjects cannot possibly be rendered so well without a filter as with one.

This is no reason for the beginner flying to the other extreme and laying in a stock of miscellaneous filters—plain, graduated, pale, deep, yellow, orange, red, blue and green—without understanding either their purpose or their use. He had much better start with a simple yellow filter, that will require doubling, or at the most trebling the exposure,

Fig. 1.

Fig. 2.

and see what difference it makes in his results. He can do this only by making a number of pairs of exposures, one with the filter and the other without, and comparing the resulting prints.

Fig. 1 and Fig. 2 form such a pair—both on orthochromatic film, the first without a filter and the second with a plain yellow filter, which with this film demanded an exposure three times as long.

Fig. 3 is a key plan showing what the principal groups of flowers are, namely :

A.—Scarlet geraniums.
B.—White daisies.
C.—Yellow calceolaria.
D.—Salmon-pink geraniums.
E.—Light mauve violas.
F.—Light and dark blue lobelia.

Now the chief effect of the yellow filter is to allow the yellow rays to act throughout the longer exposure, while at the same time it cuts out blue rays which would otherwise be

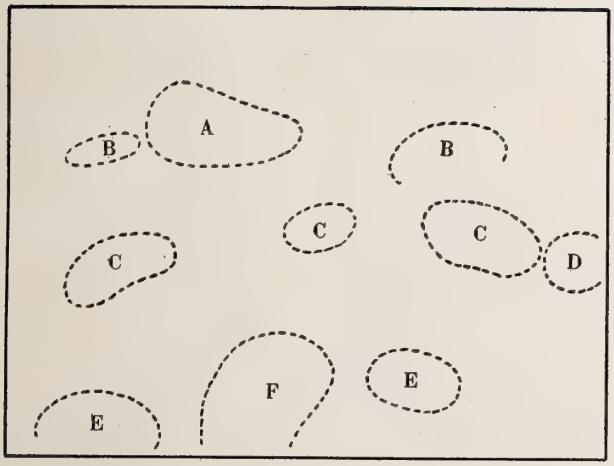

Fig. 3.

over-exposed. That is why the yellow calceolaria come out much brighter in Fig. 2, while the blue lobelia, notwithstanding the extra exposure, come out darker.

Greens, which contain both blue and yellow rays, are not so noticeably affected; but with a yellow filter a yellow-green will tend to be lighter in tone, and a blue-green darker.

In the original prints the violas are slightly darker in Fig. 2 than in Fig. 1, owing to the damping down of the blue. The white daisies naturally show no difference, neither do a few scattered pansies which are as near an approach to black as a flower can well make.

Also in the original prints, much more than in the reproductions, the scarlet geraniums are distinctly lighter in tone in Fig. 1. Considering that the film was orthochromatic, and not panchromatic, why should this be? With a panchromatic film, sensitive to red, they would have been lighter still in Fig. 1, and still lighter in Fig. 2. But on orthochromatic film, insensitive to red, it might be expected that they would come out equally black in both.

This is the explanation. The scarlet geraniums reflect a certain amount of bluish sky light. It is not apparent to the eye because of the overwhelming predominance of the strong red rays; but it is there. These weak blue rays are cut out by the yellow filter, and that is why the geraniums are darker in Fig. 2.

The salmon-pink geraniums are distinctly lighter in Fig. 1 than in Fig. 2. I prefer to receive an explanation of this rather than offer one. Sky light is not sufficient here.

The main lesson the beginner should learn from these actual examples is this: He should use a yellow filter when he wishes to lighten objects rich in yellow rays, and to darken objects rich in blue rays. Hence the value of such a filter in the familiar example of yellow clouds against a blue sky. A pale yellow makes a difference; a deep yellow makes more; a red exaggerates the contrast so that it is not realistic. The most useful all-round filter is a medium yellow.

When red rays are in evidence a panchromatic film should be used to do them justice. Sometimes a yellow filter is needed to hold back some of the blue rays, and sometimes not. There is no filter that is suitable for all subjects and conditions, and that is another reason why the beginner should walk warily at first. W. L. F. W.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

THE " OPTOCHROM " TANK.

SIR,—I note that your contributor, Mrs. K. M. Parsons, deplores the lack of a developing tank which gives negatives free from scratch or blemish.

I have used an " Optochrom " tank continuously for eighteen months, and can definitely state that it gives absolutely unblemished negatives. There is, of course, no apron, so that it is impossible to mark the negatives in any way. The ease of its daylight loading and the convenience of fixing and washing in the same tank have made it my most treasured accessory. The main point I find for successful operation is to keep the developer agitated throughout development.

Apart from being a satisfied user I have no interest in " Optochrom " products.—Yours, etc., J. C. JENKIN.

LATITUDE IN EXPOSURE.

SIR,—In your issue of August 19th a letter from a Mr. Paddock expresses surprise at a, presumed, statement about Ilford Dufaycolor film exposures.

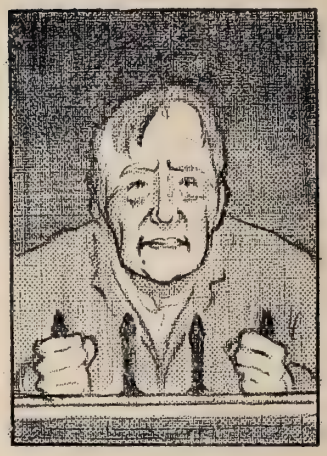
It is apparent that a misconception exists here. On page 11 of the Ilford Book, " The Dufaycolor Process," the following statement appears:—

" Variations in exposure of at least 8 to 1 will not cause serious divergencies in the colour positives *if they are processed individually in accordance with the methods given here. If all exposures are developed for a fixed time, the latitude is of the order of* 4 *to* 1, *but can be increased by subsequent reduction or intensification.* Nevertheless, transparencies of maximum brilliance will only be obtained by correct exposure."

The emphasis is mine. As, later in the same chapter, we find detailed instructions for intensification and/or reduction of individual transparencies, *during the course of processing*, the estimated latitude of 8 to 1 is explained.

Personally, with two seasons of extremely successful Dufaycolor exposures behind me, I find that one need not worry unduly about latitude, provided that an accurate exposure meter be used on all occasions.

The range of subjects " shot " includes (a) interiors of crypts and ancient chapels, whose only illuminant was that of small stained-glass windows, (b) sparkling sea shots against the light, (c) portraiture, (d) a variety of gardens, and (e) almost innumerable beach, sea, sky, cliff and cave shots, so that accuracy of exposure was quite important.—Yours, etc.,
W. F. ELLIOTT.

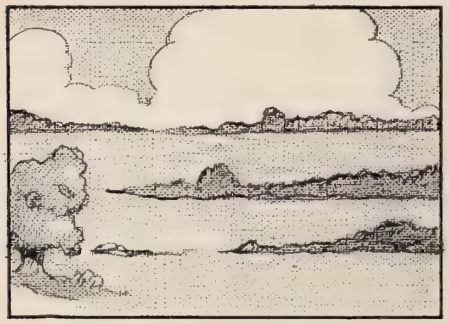


LENS FOCUSSING.

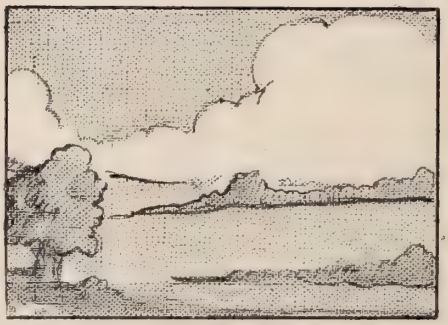
SIR,—I was interested to read, in your issue dated 26th August, your correspondent Mr. J. A. Miller's letter under the heading of " Lens Focussing," and I personally cannot agree with him in his contention that it is easier to estimate distances in yards than it is in feet. For myself I would find it extremely difficult to visualise distances in yards, and in any event the range of markings suggested would not, in my opinion, be suitable for general hand-camera work. I could not reconcile myself to use a camera with nothing on the scale between 6 and 12 feet, and the suggestion that distances could be adjusted to suit one of the standard yard distances engraved on the scale savours of adapting the job to suit the tool, instead of adapting the tool to the job, which is surely the only common-sense method.

The real solution of the focussing problem is, of course, the use of some form of range-finder which effectively eliminates all guess-work, and although range-finders are at present only found on the more expensive type of camera, I think the day is not far distant when they will be fitted as standard on the cheaper class of instrument. For many years I used roll-film cameras with focussing scales marked in feet and cannot say that I ever experienced great difficulty in obtaining accurate focus, but I recently purchased a camera of the popular twin-lens miniature reflex type which has effectively banished all focussing worries, and I am convinced that any amateur who has tried a camera with some form of visual focussing, or a range-finder, will never readily go back to the old method of an engraved scale and the estimating of distances.—Yours, etc.,
J. C. ARTHUR.

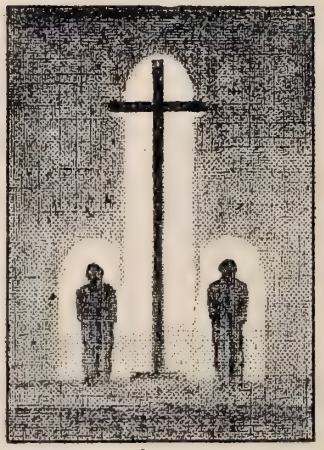
Picture Points



No. 16 (New Series) *by RICARDO*



Variety of Areas.



FOLLOWING somewhat on the lines of repetition, areas or shapes have also to be considered with regard to variety and monotony. There is just as much danger in repeating a shape too closely as far as area and shape is concerned, as there is with lines.

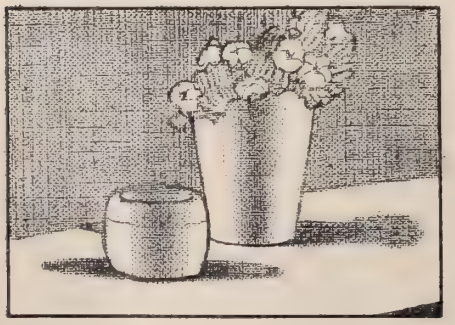
In the first sketch the landscape has been purposely divided into three sections, each of approximately the same area and the same shape. The question of tone does not enter into it at the moment, so that the tone of each is the same throughout. Were it not for the slight variation in the hedges, the subject would be far too monotonous and uninteresting. With a landscape such as this there is only one remedy and that is to select a viewpoint that would provide more variety, something like that in the lower sketch where the three divisions are varied in area. The effect here is much more pleasing and interesting.

The same point can be found in every type of subject. Should it be impossible to get variety in the various parts of the picture, we can relieve the monotony by varying the tones of each. This will be illustrated later on.

Where Central Interest is Justified.

EARLY in this series of picture points it was advocated that the centre of interest should be placed on one of the "thirds," and a diagram was given to illustrate it. This is very good advice, particularly for beginners, but as with all so-called laws and principles, it has its exceptions. Two examples are given here. The left sketch has been taken from an actual war memorial in Austria, and it would be difficult to find a more impressive picture of it than one taken from the exact centre of the subject. It gives a dignity and reverence that would be missing if the camera were so placed that the cross came on one of the thirds and giving more variety in the placing and size of the two figures. Here a central position is perfectly justified.

In the case of the portrait, all attempts at placing the head out of the centre line of the picture to make a more interesting arrangement would at once lose the dramatic touch that is so obviously the *motif* of the picture. It is not intended that the portrait in this instance should portray the character so much as the emotion, and there is a big difference between these two subjects.



The conclusion we can draw from placing the interest in the centre line of the picture (and this does not necessarily mean the centre *point* of the picture) and placing the interest on one of the thirds, is that we must compensate for the lack of pictorialism by increasing the dramatic and impressive effect.

Suitable Lighting for Still-Life Subjects.

THERE is no doubt that artificial lighting is easily more popular than daylight, because of its convenience and constancy. While there are many good points to be said in favour of daylight, both diffused and direct, it is seldom available in the right direction and intensity at the right time. Although artificial lighting can be varied in direction, intensity and concentration, there is a danger of overdoing the number of sources of light.

An example is given in the left-hand sketch, where two lamps have been used at an equal distance and direction on either side of the subject. Consequently, it has set up a division of interest by causing a double shadow as well as a double high-light on each of the objects. It is always better to aim at one main source of lighting with a secondary light so placed to relieve slightly the shadows caused by the first. If we re-arrange the lighting, as shown in the second sketch, we can see the better effect of using a major and minor lighting. There is now variety in the high-lights as well as the shadows, and a much better light and shadow arrangement is possible.

At the same time, it will be noticed that the composition has also been re-arranged and shows corrections of faults previously discussed in the series, i.e., central placing, blank, monotonous tones, and lines running into each other.

It may be as well to point out, also, the fault of having a hard, unbroken, straight line to divide the ground from the background, as in the first illustration.

Rolleicord

Wanstead, E.11.

"... I have thoroughly examined and handled the camera and must praise the high qualities, both of finish and ease of using. I may say that I have changed to the 'Rolleicord' from a camera of almost equal price. Without wanting to appear too enthusiastic, I honestly consider I have at least £5 better value. The direct lighting arrangement is specially useful."

(Signed), J. H. R.

Hale, Cheshire.

"Thank you for your letter of the 24th inst. You can certainly use my letter in any way you like. It is merely the sincere appreciation of a very satisfied user of the 'Rolleicord' who has at last found THE camera."

Yours faithfully,

(Signed), R. B.

There are hundreds of delighted users of the Rolleicord, of which the writers of the above two letters are typical. There's no doubt it is to-day's finest value. Rolleicord embodies all these splendid features: Automatic film wind, new type reflex hood, large magnifier, depth-of-focus and focussing knob combined, engraved exposure plate, one-lever Compur shutter, speeded to 1/300th sec., T. and B. Takes 12 pictures on 8-exp. 3¼×2¼ roll film for 1/-, and shows your picture full size and right way up. Has leather-covered body. Takes all Rolleiflex accessories, except only the angle mirror.

With Zeiss Triotar F/4.5 lens, **£14 : 10 : 0**
With Zeiss Triotar F/3.5 lens, **£17 : 10 : 0**
Ever-ready Case, **£1 : 0 : 0**

THE GOLDEN BOOK OF THE ROLLEIFLEX - - 7/6

Contains 127 masterpieces of photography, with valuable data and information for Rolleicord and Rolleiflex users.

Granville PRODUCTS PRODUCE BETTER PICTURES

Whether used by the novice, the advanced worker or the professional, GRANVILLE PRODUCTS ensure the maximum results with the minimum effort. Every day we receive testimonials from new customers who are surprised and delighted—surprised at the quality obtained at such a low price—delighted with the ease in which such perfect pictures are obtained. If you are just beginning, start right with "GRANVILLE"; if you have years of experience, change to "GRANVILLE." You will never change again!

"THE GRANVILLE GUIDE"

This new publication is a superb 16-page de luxe illustrated edition. Specially issued for users of Granville Photographic Products, it contains up-to-date working instructions, formulæ, and many useful articles specially written by our own experts. A complete list of all materials is also given, including many new lines. If you have never communicated with us before, **write to-day for your copy.** Applications should be addressed to: PUBLISHING DEPARTMENT, Granville Gulliman & Co., Ltd., P.O. Box 3, Leamington Spa.

If you have previously communicated with us, please do not apply, as a copy will be sent to you.

For
Perfect Pictures

FILTERED-ORTHO
AND
CHROMOSA PLATES

For colour values as YOU see them.

Correct monochrome rendering of the colour values in landscapes—without the use of a light filter—and for recording the delicate tints and gradations of sky and cloud effects, which are inevitably lost on a plate that is not truly colour sensitive. "Chromosa" is a little more vigorous working than "Filtered-Ortho"; both are 300 H. & D. and rapid enough for all general instantaneous work. These are plates you should try—and compare.

GEVAERT LTD.
WALMER ROAD, LONDON, W.10

MAKE MONEY *with your camera*

We want all types of interesting Photographs from everywhere for publication in thousands of newspapers, magazines, etc., all over the world.

Here is a wonderful opportunity for YOU to "cash in" with your camera! Any ordinary camera will do. No particular experience or ability is required to commence this NEW profitable profession in **YOUR SPARE OR FULL TIME.**

It is an occupation with permanent MONEY - MAKING possibilities **FOR YOU.**

PERMANENT MARKETING SERVICE FOR YOUR PICTURES

We offer you the unique facilities of our special Marketing Department—*in accordance with our Marketing Agreement.*

By the J. P. D. "Dictograph" Method you will be shown every branch of the profession—from the actual taking, developing and printing of saleable photographs—to advice as to the requirements of editors of newspapers, magazines, periodicals, photographic agencies, advertising companies and other commercial firms.

Also, under our supervision and guidance, successes in prize competitions—regularly conducted by numerous journals—await your best efforts.

CONVERT A FASCINATING HOBBY INTO A WELL-PAID PROFESSION IDEALLY SUITED FOR BOTH MEN AND WOMEN.

You will enjoy the work, it is intensely interesting. You can devote just as much or as little time to it as you wish—we want indoor as well as outdoor pictures taken in rain, fog and snow as well as in sunshine—by day or night, in winter and summer—in city, town, seaside or country, on every day of the year. All suitable photographs are personally submitted to the best markets and highest prices obtained.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Possibilities of Documentary Films

By ORLTON WEST.

THE majority of amateur films imitate commercial ones—their subjects, plots—even their titles. But is it worth attempting to compete with big studios who can afford those expensive sets and skilled players which alone make fiction films convincing?

Amateurs should surely be doing what big studios cannot and dare not do—experimenting with documentary films!

I do not mean the old-fashioned type of "interest" picture whose scenes were merely thrown together; but the modern documentary like Turin's "Turksib," Grierson's "Drifters," or Buchanan's "Cinemagazine," in which the material is skilfully and deliberately organised.

Tackled properly, this type of film can be made as dramatic as any murder plot, and far more original. From the amateur's point of view it has the advantages of cheap production and absence of sets—actual everyday "sets" being used instead. It also provides technical practice for the individual worker.

How, then, should a documentary subject be tackled?

We will choose the subject "Railway," for example. Since that vaguely suggests a chain of ideas, including stations, disasters, holiday travel, etc., we must be more definite and select a particular aspect of our subject.

A thrilling little film might deal merely with a single train journey—start with shots of the station, continue with crowds pouring into it, moving luggage, hurry, people boarding train, train starting, farewells, gathering speed of train; and finish with the engine approaching the buffers at the terminal station.

Another might deal exclusively with railway labour—an entirely different theme. It could record the labour of a single day, thus formulating itself into something more definite. This film might start with early morning shunting operations, show shunters, repair workers, wheel tappers, etc., at work, and finally, trains being put to bed in their sheds.

Having chosen a particular angle on our subject, the next thing is to think round it and collect as much material as possible from books and your own head. Then search for locations. Incidents and objects seen on a railway journey may suggest ideas. Conversations with railway workers may provide human touches which you can introduce if you have an eye to "entertainment value."

Make notes all the while, and then, from your mass of material, select what you can use, and, with it, sketch a scenario.

This should not be too rigid, since the structure of a documentary, unlike a story film, is not strictly controlled by movements of players and development of plot.

When preparing the schedule do not forget that the officials, and all the people who are responsible for the care and welfare or whatever it may be, are undoubtedly the finest source of information regarding the subject in question. A courteous approach and explanation will usually get their wholehearted support.

But beware of after-thoughts and wild ideas. Those which occur to you while using the camera should be included only if they fit in with the general scheme of the picture, and do not shoot off at a tangent from it. When for example, recording activity on a railway station, it would be unwise to expose many feet on traffic in the street outside it, just because the traffic is moving pleasantly. The point of the sequence is "station," not "street" traffic.

Confusion of thought—or purpose—is fatal to documentation. Planning is essential, or you will find yourself running wild with your camera, and shooting various odds and ends which cannot be assembled in the finished picture without destroying its force.

Those interested in the science—for it is a science more than an art—of constructive editing, will find full scope for experiment in the documentary film.

Bursts of action can often be introduced—and periods of inaction to contrast with them. Returning to our

Children in the Park. A subject full of action and colour for the ciné worker at this time of year.

railway example, the series of shots of the railway station would be quite static, but that of crowds entering the station would be full of rapid movement—long, medium, and close shots of people, handbags, luggage trolleys, porters, taxis, all moving in the *same* direction—towards the train.

A single long shot was the old-fashioned way of means of treating such scenes. It was the method of the theatre, not of the cinema.

Again, in filming the train journey, passing stations, signal boxes, signals, etc., could be best presented in a series of brief scenes to suggest their flashing by.

Whatever technique you employ, a shooting schedule is necessary, that is to say, a list of all scenes to be taken on particular locations. If station scenes occur at the beginning, middle, and end of your scenario, your schedule should tell you to take them all on the same morning or afternoon as the case may be.

If brevity is the soul of journalism, good photography is the soul of film documentation; for when you are dependent upon action and light and shade for the pictorial value of your scenes, a single obscure shot due to poor camera work may ruin a whole section, and cause a break in continuity and interest of your audience.

The wide variety of lighting and composition met with on exteriors gives valuable experience to the amateur camera-man, and if you do not use an exposure meter, it is worth making notes of apertures, lighting conditions, etc., for future reference.

This system of planning may sound rather complicated, but it may be applied to any subject under the sun, even those upon which professional producers are engaged.

Amateurs who live in cities are even better provided with subjects. A recently completed film tells the story of London's docks. Think of the possibilities there! Ships steaming up the river—men working the filling and emptying locks—ships docking—crews leaving, meeting families—cargoes being unloaded—loaded—cranes working—incidents on the quayside—ships departing. Even a simple story could be worked against such a setting.

Joris Ivens, a Dutch experimenter, has made films dealing with such simple events as a shower of rain, and a bridge of the Tower Bridge type opening and closing to allow the passage of vessels.

The latter picture was built with shots taken from many different angles—another fruitful field for experiment.

Another successful little picture suggestive to the amateur dealt with the River Thames, tracing its history, and its course, from source to mouth.

Present-Day Pitfalls

By T. F. LANGLANDS.

FROM the examination of the films taken by over a hundred different amateurs during the last few months, it is clear to the writer that each year sees a still higher standard of technical excellence being obtained by even the veriest beginners. To-day, that old bugbear, correct exposure, no longer floors the amateur—partly because of the more general use of meters—and the shots that are spoilt fail from quite different reasons.

Such exposure errors as one does meet with are on two extreme kinds of subject—long-distance views, and close-ups taken in the shade; and it does not seem to be sufficiently well understood that there is tremendously more punch in the light when taking a distant scene, particularly as a lot of light may be reflected from the ground. Most beginners who do go wrong trip up mostly on near portrait subjects which often suffer from gross under-exposure.

The passion for filming babies in dark areas with blackened brick walls for backgrounds is a mania which has to be seen to be believed, and it is really a most common occurrence only equalled by the anxiety to find dark banks of shrubbery and hedges for posing other close-up portrait shots to obtain contrast.

Why people have to be propped up near dark walls or hedges to be taken is a mystery, but it is being done every day and causes other troubles, apart from the actual exposure problem.

We have all seen portrait snapshots taken on the beach on a sunny day; the light reflected from sea and sky eats into the head and shoulders, giving an indefinite misty outline devoid of details and contrast. That is halation, and it is always present, lurking ready to bite into the dark shadow portions of the picture whenever dark shadows come against high-lights.

That introduces one of the arguments in favour of always using panchromatic film, not because it is faster or more colour-sensitive, but because of its superior anti-halation properties over the general run of ortho films, thereby reducing the spilling-over of light into shade.

It is best, then, to avoid too contrasty effects, particularly with portraits, and aim at getting all the range of tone even at the expense of making the picture a trifle flat. A shot with too much contrast will lack finer details, and it is surely detail that is chiefly prized on sub-standard films.

Two trial shots of any test subject, one taken in sunshine, the other in shade with a medium grey background, each with its appropriate exposure, will show that the less contrasty shot will be the truer, more pleasing, and show the greatest detail.

Coming now to other faults, the chief one that mars so many efforts is the irritating, nervous way in which cameras are jerked about. Animated pictures, certainly, but why so many dislocated ones? Why will amateurs stand a few yards away from a building and swing the camera up and down, left and right, getting it all in, bit by bit, jerk by jerk, when a shot taken from a slightly greater distance will save film and give better perspective.

Why not take moving objects by keeping the camera reasonably steady and letting the moving figures, traffic, etc., move across the field of view, instead of swinging the camera to and fro so that the whole street flutters jerkily along?

That is certainly the major fault in most amateur films, even in the case of those with a great deal of experience, and makes one wish at times that tripods were still necessities.

CAN THE CAMERA LIE?—A New Competition

IN the Summer Number of *The Amateur Photographer*, published on July 22nd, a new competition was announced in connection with articles that appeared in that issue dealing with "pictorial inexactitudes." It was demonstrated that by judicious application of the camera, combined with unusual viewpoints, or by double exposures, results were obtained that on their face value appeared to be unreliable.

In this competition, prizes are offered for the best photographic "untruth," but the prints must be quite straight and from untouched negatives. Combination prints, or prints that have been built up by cutting out other photographs and copying, or prints that have been obtained by various "control" methods, are not eligible for this competition.

The prizes are **5 guineas, 3 guineas, 2 guineas, 1 guinea** and **10s. 6d.** They will be awarded for what are considered to be the best efforts in making the camera "untruthful." The negatives of the winning prints and of any others must be submitted for inspection if required. Technical data should also be given regarding the production of the photographs.

There are no other conditions beyond those mentioned above. A special competition coupon, which appears each week in the advertisement pages, must be affixed to the back of each print. The closing date will be September 30th.

Entries should be addressed to the Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and should be marked on the envelope, "Special Competition."

Exhibitions and Competitions

CURRENT AND FUTURE.

Windlesham C.C.—Entries, September 10; open, September 25–26. Classes for members (Beginners, Advanced, Professional, also Open Class). (J. C. Hayward, Hallgrove, Bagshot, Surrey.)

IV International Hungarian Exhibition.—Entries, September 15; open, October 24–November 9. (Secretary, Magyar Amatörfényképezök, Orsz. Szövetsége, Budapest VII, Erzsébet-körut, 9, Hungary.)

Rotherham P.S. Forty-seventh Annual International Exhibition.—Entries, September 21; open, October 14–17. (E. George Alderman, Ruardean, Newton Street, Rotherham.)

Service Co. (London), Ltd., Happy Camp Snaps Competition. Cash prizes.—Entries, September 30. (Service Co. (London), Ltd., 273, High Holborn, London, W.C.1.)

Coronet Midget Camera Competition. Cash prizes.—Entries, September 30. (Coronet Camera Co., 310, Summer Lane, Birmingham, 19.)

Eighth International Photographic Salon of Japan.—Entries close in Tokyo, September 30; open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo, Asahi Shimbun, Tokyo, Japan.)

Photographic Society of America 100 Print Salon.—Entries, October 1. Limit 4 prints. Entry fee $1.00. (Dever Timmons, Salon Secretary, Box 216, Cashocton, Ohio.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Entries, October 1; open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

G.E.C. (Coventry) Third Annual Exhibition. Open classes for members of Midland Federation Clubs.—Entries, October 14; open, November 9–14. (P. H. Crosby, Hon. Sec., G.E.C. Photographic Society, General Electric Co., Ltd., Coventry.)

Johnson's "Holiday" Competition. Cash prizes.—Closing date, October 31. (Johnson & Sons, Ltd., Hendon, N.W.4.)

U.P. International Exhibition of Photography, 1936. (Lucknow).—Entries, November 1; open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.) Entry forms obtainable also from the Editor of *The Amateur Photographer*.

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Entries, November 15 open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr, 69, Antwerp.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22-March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

31.

DRY MOUNTING

A VERY popular method of mounting photographs, as it permits prints to be mounted perfectly flat on any kind of support, permanently and without marking the print. Briefly, the method consists of the use of thin sheets of tissue paper as the adhesive, which have been saturated with a solution of shellac and dried. A sheet of this tissue is applied to the back of the print by touching it here and there with a hot iron or the back of a metal spoon, heated to about 160 to 170° Fahr. This melts the shellac where touched, and makes it adhere to the print. The print and adherent tissue are then trimmed together to the required size and laid down in the correct position, previously selected, on the mount. The print and mount are then placed under pressure between thin metal plates in a dry-mounting press, in which metal pressure slabs are heated to about 170° Fahr. for approximately 15 seconds.

The heat and pressure cause the shellac to melt, and the print becomes firmly cemented to the mount. Several small appliances are on the market for dry mounting for amateurs, but the large machines still give the best results. The use of the ordinary flat-iron, suitably heated, has been suggested for dry mounting prints, but, although it can be used, it is not an entirely satisfactory substitute.

Dry-mounting tissue is best bought already prepared, but may be made by saturating suitable tissue paper in a solution of the resinous gum known as sandarac or gum juniper. It is usually sold in small tears averaging about a quarter of an inch (6 or 7 mm.) in diameter, these tears being nearly colourless. The price is about the same as that of shellac. One part by weight of the sandarac, dissolved in from one and a half to two parts by weight of industrial alcohol, will give a suitable solution for saturating the tissue paper. The prepared sheets are hung to dry flat before use.

32.

TO FIND FOCAL LENGTH OF LENS

THE focal length of a lens is the distance between the node of emergence of the lens and the centre of its focal plane when the lens is focussed on infinity.

There are many different methods of calculating the focal length of a lens. For exact measurements an optical bench is necessary, but for most amateurs' purposes there are a few methods which need but little apparatus and will give results accurate to 1/32nd in. One popular method is described below and is suitable for use where the entire lens is moved to and fro for focussing and where the camera has a double extension and a focussing ground glass.

First, focus the lens on infinity, on, say, a church spire some little distance away, and mark the position on the baseboard where the focussing pointer rests. Next take a piece of white card about 3×2 in., and cut it into two (3×1 in.). Pin one of these pieces on a wall, rack out the lens panel of the camera to give double extension and focus the lens on it to give an image of *exactly* the same size. The second piece of card serves as a convenient check for the image. Mark again the position of the focussing pointer on the baseboard extension, and the distance between these two baseboard marks is the focal length of the lens. This method is based on the optical law that the focal length of a lens is doubled to obtain an image the same size of the object in focus.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Focal Length of Lens.

What advantages are there to a lens the focal length of which is an inch longer than the diagonal of the plate used? W. E. M. (Cambridge.)

One advantage is that the image is a little larger than that which would be given with a lens of normal focal length. Or conversely, one could stand a little farther away to get the same size image. If a 6-in. lens were used in place of a 5-in. lens the image would be one-fifth as large again in lineal dimension. If the camera is fitted with a generous rising lens front it would be an advantage to have the longer focal length of lens as it would have a greater covering power, if the two lenses were of the same type.

Blue Spots on Prints.

Whether my prints are sulphide-toned or not I get small blue spots on them. What is the cause, and how can I remove them? J. D. (Huddersfield.)

The most likely cause is due to the presence of minute particles of iron rust in the water supply. Try fastening a piece of thick flannel over the tap next time you draw off water and note if the spots occur again. Dilute some hydrochloric acid to half strength with water and apply to each spot with a pen. Blot quickly as soon as the acid has acted and finally wash the print well to remove all traces of acid.

Right of Way.

What is the law regarding the right of a person to photograph property on the right of way? J. J. G. (Southend.)

One may photograph anything that can be seen from the right of way, whether it is a public highway or a public footpath. Thus, a photograph can be made of any private property that is visible from the public road, but immediately one sets foot on private ground to make the photograph, then the owner can prosecute. Should, however, a photograph be made of persons while they were on the public road and the reproduction made them appear as though deformed or ridiculous, the photograph could be restrained from further use on the grounds that it might injure the plaintiffs' reputation.

Focal-plane Shutter.

Does it weaken the spring of a focal-plane shutter or lens shutter to leave it set at high tension? P. O. (London.)

It is always advisable with any type of focal-plane shutter to slacken off the tension when finished for the day. The same applies to any type of lens shutter which requires to be wound up or "set," like the Compur shutter. Do not leave it for any length of time ready set for an instantaneous exposure, particularly if the indicator is set for a high speed.

Amidol Stains.

I find that amidol developer stains the finger-nails badly; what will prevent this? A. G. (Birmingham.)

We are doubtful whether there is any absolute preventative for staining the finger-nails when using amidol frequently. One thing that has been recommended is to have at hand a basin containing water slightly acidified with hydrochloric acid, to rinse the fingers in this after each immersion in the solution, and then to rinse them in clean water and dry them. After the work is finished the nails should be thoroughly scrubbed with a brush, soap and hot water.

Photographs for Reproduction.

Why is it that contrasty prints are preferable for reproduction purposes? G. M. L. (Eastbourne.)

If the photographs are reproduced by the half-tone process, as with all the newspapers and most magazines, and by the litho. process, the dot screen which enables the varying tones to be printed causes a certain loss of tone and flatness. To overcome this, the original is preferred to possess a little more contrast in tone, to compensate. For the gravure process, by which some of our weekly periodicals are printed, the originals are preferred to be of full gradation but not contrasty. Although there is a screen present in this process as well, it is very much finer, which, together with the different principle of ink application, gives a much longer scale of tones, and for various other technical reasons it does not have the same effect of tone loss as with the other two methods.

Title Strips.

How can I make negatives of lettering for title strips? I enclose a sample, but cannot myself get sufficient contrast. E. S. (Ilford.)

It is quite a simple matter to produce the sort of negative you require if it is done in the proper way. The first step is to get the lettering in black on white card; the lettering may be done by hand with indian ink, or on a printing press, provided the ink is black and the outlines sharp. The original is then set up in a good even light and photographed on a process plate. It is the use of process material that is the secret of success, and with suitable exposure and development it is possible to get the densest black, with the letters showing as perfectly clear gelatine.

Perspective.

I have been told that for holiday snapshots the V.P. size is no good as the perspective is much distorted. Should I do better to get a $3\frac{1}{4} \times 2\frac{1}{4}$ size? W. T. G. (Slough.)

What you have been told about the perspective is very unreliable. The size in which any given object is rendered when photographed depends upon two things—the distance from the object, and the focal length of the lens; and has nothing to do with any particular make of camera. Holiday snapshots are quite successfully made in vest-pocket size with a short-focus lens suitable to that size of camera. If you photographed the same subject from the same spot with a V.P. camera, and also with a $3\frac{1}{4} \times 2\frac{1}{4}$ camera, the chances are that the only difference would be in the size of the pictures. The perspective would be the same.

Metol-Adurol.

Some time ago you published a formula for a one-solution developer containing Adurol. I made this up and found it very satisfactory, but I have now lost the formula. Can you repeat it for me? J. S. (Bristol.)

The formula for which you ask is as follows:—

Metol	30 grs.
Adurol	120 grs.
Sodium sulphite	750 grs.
Potassium carbonate ..	2 oz.
Potassium bromide	17 grs.
Water	10 oz.

Dissolve in order in water at a temperature of about 160 degrees. For ordinary use dilute with seven times its bulk of water.

A PRIZE COMPETITION FOR NOVICES

THIS competition is specially for those readers of "The A.P." who are Novices; that is to say, amateur photographers who have never won an award of any description in a photographic competition, and preferably those who are only just starting photography.

The prizes will be awarded for the best snapshots of subjects that the beginner usually attempts. These include snapshots of the family, groups, or single figures taken at home or on holiday, either indoors or outdoors, and landscape and beach scenes, etc., with figures. The arrangement of the subject and the pose of the figure or groups is a matter left entirely to the discretion of the competitor.

The entries will be restricted to contact prints. These may be mounted if preferred, and the smallness of any print will not affect its careful consideration in this competition. The rules are very simple, but should be read carefully.

Our readers who are Novices still have time in which to make their prints for this competition, and the prizes are worth having.

THE PRIZES.

The prizes in this competition will consist of supplies of roll film or plates (for those winners who happen to use a plate camera), as follows:—

The First Prize will be—
TWO ROLL FILMS EVERY WEEK FOR ONE YEAR.

The Second Prize will be—
TWO ROLL FILMS EVERY WEEK FOR SIX MONTHS.

The Third Prize will be—
ONE ROLL FILM EVERY WEEK FOR SIX MONTHS.

Twelve Prizes of—
ONE ROLL FILM EVERY WEEK FOR THREE MONTHS.

The winners of these prizes will thus be encouraged to continue their photographic activities throughout the year with a supply of free film.

RULES.

Each print must have affixed firmly to the back a coupon which will be found in our advertisement pages each week. This must contain title of print, and name and address of competitor.

The latest date for receiving entries is September 30th.

The decision of the Editor in all matters relating to this competition must be accepted as final.

All entries must be addressed as follows: The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the outside of the envelope or package must be clearly marked "Novices" Competition.

5×4 Soho Reflex, Carl Zeiss f/4.5 Tessar lens, 3 double plate-holders, case. List price £45. For..... **£20 0 0**

Model II Leica, Elmar f/3.5 anastigmat lens, shutter speeds 1/20th to 1/500th sec., chromium-plated model. In new condition. List price £27 17s. For..... **£22 10 0**

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

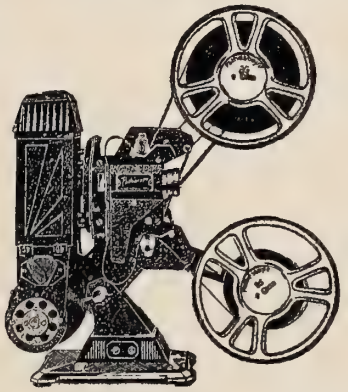
Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.



Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Get a Good Projector NOW—for the Autumn showing of your Summer films.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

SQUADRONS of the Royal Air Force

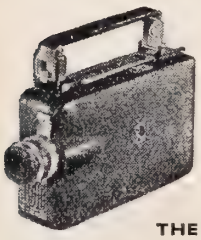
Written by
Major F. A. de V. Robertson, V.D., M.A. (Oxon.),
Lieut.-Commander C. N. Colson, R.N.; and
Flying Officer W. A. Cooke.
Illustrated from "Flight" Photographs by John Yoxall.

A beautifully illustrated record of the work of the R.A.F. in peace and war

In this book the Squadrons of the Royal Air Force are for the first time dealt with as living entities. The personnel of distinguished service units, their record, the machines they use, and modern aircraft are fully described. Cadet routine at Cranwell and training of apprentices at Halton are explained in detail.

140 pages lavishly illustrated with more than a hundred exclusive photographs—fifteen as full-page pictures in photogravure.

Bound in stiff cloth boards and with attractive jacket in photogravure. Size 12¼ in. × 8¼ in.



PRICE 7/6 net; by post 8/-

From all leading Booksellers or direct from the offices of "FLIGHT."

THE IDEAL BOOK FOR AIR-MINDED YOUTH—
the most attractive and informative book about our flying forces.

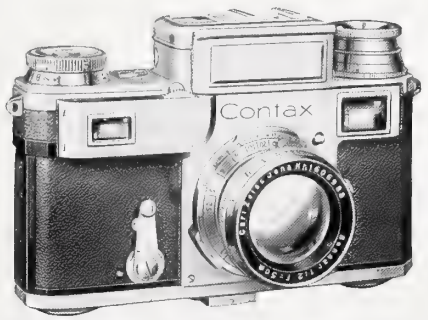
OUR NEW AND EXCLUSIVE DEVELOPING SERVICE



Our "MICROLUX" Service of developing in Paraphenylene-Diamine and other agents ensures the best results from your film; results which have so minute a grain size that they will enlarge twenty diameters or more without the grain becoming apparent, but owing to the nature of this development it is **essential** that films for "MICROLUX" development receive at least **twice the normal exposure.** Providing this extra exposure is given, negatives developed by our "MICROLUX" process possess a quality that cannot be equalled by ordinary methods, but to submit a film which has received merely the bare minimum exposure to this form of development will not yield good results. The latter we can also develop under the same "INDIVIDUAL" conditions, but in this case the results are not of such microscopic grain size. We offer this service, confident in the belief that it will meet the requirements of those careful workers who would always do their own processing had they the convenience.

"MICROLUX" and "INDIVIDUAL" Development Prices.

Leica, Contax and similar films: Per 36 exposures, **4s. 6d.**; per 12 or 18 exposures, **3s. 6d.**

All other 6, 8, 12 or 16 exposure films (up to 3¼ × 2¼ size): Per film, **3s. 6d.**

Note.—When sending films for this special treatment it is more than usually necessary to advise us as to the make and type of film used.

NEW ZEISS IKON CONTAX III

Splendidly improved and fitted with built-in photo-electric exposure meter. As usual, we have the **first** models ready for immediate delivery.

SEE THAT IT'S A SELO FILM PACK

For efficient operation and consistent success, the film pack user can always rely on Selo Film Packs.

SELOCHROME FILM PACK for general use—multi-coated, anti-halation backed, orthochromatic.

SELO HYPERSENSITIVE PANCHROMATIC FILM PACK—the fastest fully colour corrected film made.

With Selo Film Packs there is no danger of fogging, not even at the edges. Tabs of different length prevent pulling round more than one film at a time. No need to open the pack or remove from the adapter when taking out films for development.

Obtainable from photographic dealers in the popular sizes.

Made in England by

Ilford Limited, Ilford, London

Photograph by Challoner Woods, Curling Studios, on Selo Hypersensitive Film Pack.

Printed in England for the Publishers, Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1, by The Classic Colour Press, Reading.

The Amateur Photographer can be obtained abroad from the following: United States: The International News Co., New York. France: W. H. Smith & Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Reaumur, Paris. Belgium: W. H. Smith & Son, 71–75, Boulevard Adolphe Max, Brussels. Australia: Gordon & Gotch, Ltd., Melbourne (Victoria), Sydney (N.S.W.), Brisbane (Queensland), Adelaide (S.A.), Perth (W.A.) and Launceston (Tasmania). Take **Super** *pictures*

this Autumn on

Kodak **Super** Sensitive Panchromatic Film

OUTDOORS, the light is a little softer, yellower, these days. Now's the time when Kodak Super Sensitive Panchromatic Film comes to the rescue. Its extra speed and high sensitivity to yellows and reds enables you to get fully-exposed pictures all through the year.

Indoors, the Kodak Night Photography Aids—"Photoflood" Lamps and "Kodaflector" Reflectors—give plenty of light for photography with any camera. Here again you need Kodak Super Sensitive Panchromatic Film. It works splendidly with these lighting aids because it is so highly sensitive to artificial light.

Indoors or out, at this time of year, use Kodak Super Sensitive Panchromatic Film for SUPER pictures. Your Kodak Dealer has it in Roll Films, Film Packs, and in 35 mm. form for "miniature" cameras.

KODAK LIMITED, KODAK HOUSE, KINGSWAY, LONDON, W.C 2

£25 CASH PRIZE will be awarded for the best picture submitted during the run of the Competition.

ONLY 2 WEEKS LEFT..

TO WIN A BIG CASH PRIZE IN WALLACE HEATON'S

35-MM. STILL CAMERA COMPETITION

Open to users of cameras taking 35-mm. film as its negative medium.

The Competition is open until September 30th. Your photographs can be of any subject—but they must be taken on 35-mm. film. Prints should not be smaller than 6×4.

Any number of prints can be sent in in any one week, but each photograph must have the coupon attached. In addition to the big prize

A WEEKLY PRIZE OF £1-1-0

will be awarded for the best photograph submitted in that week.

Each photograph must have on the back a coupon as below, and the name and address of the sender, the make of camera and material used.

For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of prize-winning prints must be made over to us without further payment.

In addition we are offering a special prize of £1 1s. per month for the best photograph submitted depicting a person or persons using a camera purchased from Wallace Heaton Ltd.

All prints will be judged at the end of the Competition for the final prize of £25 cash. Acceptance of these rules and conditions is a specific condition of entry.

★ This snap won a cash prize in a recent Wallace Heaton competition. Why not have a shot and see what *you* can do?

COUPON which must be attached to your entry. **WALLACE HEATON** 35-mm. Film Competition. September 16th, 1936.

Nine monthly payments of 58/4.

Read these letters from our customers!

Birmingham.

"I received the camera on Saturday morning and would like to say how very pleased I am with it. It is certainly in excellent condition and I could not have wished for anything better."

F. C. B.

Weston-super-Mare.

"It has been a pleasure to do business with you, as our experience in the past over other transactions (not with yourselves) has been nothing but slackness and inattention, and it is refreshing to meet a more business-like outlook over exchange transactions."

R. B.

Liverpool.

"I have tested the Leica II received on the 19th inst., and am perfectly satisfied with its performance. It is a marvellous camera and I would like to thank you for supplying it. Should I require any further apparatus, I will be pleased to place my order with you."

A. J. M.

Darwen, Lancs.

"Salex outfit arrived to-day; allow me to say I am indeed surprised and pleased at the appearance and value for the modest price charged. I am in a position to judge, having on previous occasions paid three times the amount for a similar article. Wishing you every success."

EASILY THE MOST SENSITIVE PHOTO-ELECTRIC METER AVAILABLE TO-DAY

Gives direct readings in relatively dark interiors as well as very bright exteriors. Scale clearly shows readings from 1/1,000th second to 4 minutes. The "SIXTUS" has no tables, yet it is capable of use with any film or plate from 6 DIN, 17° Scheiner to 21 DIN, 32° Scheiner, and with lenses from f/1.4 to f/45. The protective-case of the "SIXTUS" is securely fixed to the instrument and serves the dual purpose of a carrying case and convenient holder when using the meter in its normal working position. Complete in its case the "SIXTUS" weighs only 5 oz. and measures 2½×2×1 in. Can easily be operated by one hand.

COMPLETE IN BAKELITE CASE - 5 GUINEAS.

NEW "SIXTUS" METER FOR THE "LEICA"

Specially calibrated—showing all aperture values and times of exposure for the "LEICA." Built to the same design as the ordinary "SIXTUS," £5 5 0.

STOCKED BY ALL GOOD PHOTOGRAPHIC DEALERS.

Unfettered photography

is a true description of photographic technique as practised with the Zeiss Ikon Contax. The Contax will successfully take snapshots at night, portraits, long-distance shots, close-ups and scientific work, as well as the everyday landscapes and street scenes. Such comprehensiveness can indeed without exaggeration be called "Unfettered Photography".

CONTAX I

CONTAX II

CONTAX III

ZEISS IKON

CONTAX I

The universal miniature precision camera for 24×36 mm. pictures. Metal focal-plane shutter, speeded ½ to 1/1,000th second. Choice of 13 interchangeable Zeiss lenses, apertures from f/1.5, focal lengths 1⅛ to 20 in. Long base rotating wedge distance meter, detachable back, therefore easy to clean and load.

CONTAX II

The de luxe precision miniature camera. In addition to the features of the Contax I, outlined above, provides: Distance meter and viewfinder combined in one aperture, built-in delayed-action release, shutter speeded to a real 1/1,250th second, all controls located on top of camera, complete scale of shutter speeds visible on one dial, chromium-plated finish.

CONTAX III

With built-in photo-electric exposure meter. This camera is similar to Contax II, but with the addition of the exposure meter, which is so constructed as to embrace the same angle of view as the normal focus lens. This, together with the extreme sensitivity of the meter, ensures an accurate reading, which could not be obtained with an independent exposure meter.

Ask your local high-class dealer to demonstrate the Zeiss Ikon range of miniatures. New publication, "Unfettered Photography," describing Zeiss Ikon miniatures, free on request.

VOL. LXXXII. No. 2497.

TOPICS of the Week

THE visitor to London who is interested in photographic matters can have no complaint to make this week at the variety and extent of fine pictures on view for his edification. Both the Royal Photographic Society's exhibition, at 35, Russell Square, and the London Salon of Photography, at 5a, Pall Mall East, are now open, and both are first-rate shows. The former, with its variety of exhibits, pictorial, technical, and scientific, as well as a selection of apparatus, makes a general show that will appeal to every class of camera user. The Salon is entirely pictorial in character, but has probably some of the finest prints that have yet been seen in this country. At the end of the week the exhibition of camera portraits by the members of the Professional Photographers' Association opens at the Prince's Gallery, Piccadilly, and will provide yet another display of pictures worthy of attention. Preliminary notices of both the R.P.S. and Salon shows appear in this issue.

In our next issue, which will be the Special Autumn Number of *The Amateur Photographer*, further notices will be given of all the shows, and extra pages of reproductions will be a feature. Our readers are advised to order their copies early. It will be published on Wednesday, September 23rd.

Colour Prints at the Shows.

At the two shows now open in London, and at the exhibition of Commercial Photography just closed at the Prince's Gallery, Piccadilly, one very notable feature is the excellence of the prints demonstrating modern colour processes. Most of these appear to have been made by commercial three-colour carbon processes from three-colour negatives, but the quality is surprisingly high, and far in advance of the colour prints we have seen at previous exhibitions. If only the processes were more simple and easily worked by the amateur they would provide an adequate reply to the question of whether colour photography is a success to-day. There is still a tendency, however, on the part of the users of these processes to exploit bright colours to the full. This is a mistake, as an inspection of the prints at the present shows will demonstrate. The most satisfying examples are those in which there is very little colour.

SEPTEMBER SPORT.

A topical snapshot of Grouse Shooting on the Yorkshire Moors.

Pall Mall East.

Visitors to the London Salon of Photography, after they have completed their round of the pictures, may like to devote a few moments' attention to the house in Pall Mall East in which the exhibition is hung. It is more than a century old, having been erected in 1821, about which time the water-colour painters, whose home it is, decided to exhibit their productions separately from other artists. The Royal Society of Painters in Water Colours was formed in 1804, and its first exhibition was held in Brook Street in 1805. At one time the work of the Society was blended with that of the Royal Academy, but by the beginning of the reign of George IV the water-colour painters proclaimed their separation by erecting a home specially equipped for their work. Among the water-colorists who were still flourishing in the early days of this house were William Blake, J. M. W. Turner, John Constable, John Sell Cotman, and David Cox. A glance might be given to the elegant doorway of the house.

The Royal Photographic Society's Exhibition

FIRST NOTICE.

COMPREHENSIVE in scope and embracing a wide field illustrative of many of the innumerable phases of the applications of photography of to-day, the 81st Annual Exhibition of the Royal Photographic Society, which opened on Saturday last, the 12th September, at 35, Russell Square, London, W.C., offers a display which not only has interest for pictorial workers, but also caters for those whose inclinations lie in the direction of scientific investigation, nature study, or simply the making of records.

As in former years, the pictorial section is to be found in Rooms 1 and 2, and there is also a small collection of colour prints in Room 1. In the studio, the lantern slides and colour transparencies are shown, while Room 3, on the second floor, is devoted to natural history, stereoscopic prints and transparencies, the scientific and technical applications of photography being on view in Room 4. There is also a further section relating to apparatus and materials, which are displayed in the outer and inner entrance halls, in the library, on the staircase and landings, and in Rooms 3, 4 and 5.

The Pictorial Section.

Most of us will, however, find the greatest interest in the pictorial section. It is international in scope and includes examples from all parts of the world. Numerically, it runs to just over 200 prints; it is well chosen and forms quite a good show, in which landscapes, as a class, are in the ascendant. Of these, No. 3, a picture entitled "Family Group," by A. van R. van Oudtshoorn, attracts favourable notice on account of its expression of an admirable sense of luminosity, a feature which is repeated with excellent effect in "London Pride," by H. A. Murch (6). It derives a certain novelty from the height of the viewpoint, and shows the subject material in an unfamiliar aspect, which, although it is a sort of thing that has often been done before, still retains a feeling of freshness and individuality.

"Helping Hands" (41), by Adolf Fassbender, is very attractive in its suggestion of sunniness, but it does seem somewhat overfull of matter, and the figures, in consequence, do not stand out from the background as they should. J. Ainger Hall has a landscape of great breadth of treatment in No. 56, "Gave de Pau at Sunset," and it gives full effect to the majesty of the mountains which it portrays. "Distant Fields" (67), by J. B. Eaton, is of a more pastoral type, and "Tongue, N.B." (69), by S. Grimshaw, deals with mountains of lesser height and softer contours; but, in both, the quality of light is very finely expressed and lends an attraction that is decidedly out of the ordinary.

Two very sunny figure studies are to be seen in "Canyon Depths" (81), by Forman Hanna, and "The Family" (94), by Alexander Keighley. Both are delightful pieces of work, and so is "Pellestrina" (118), by J. G. St. Aubyn, where a huge sail in sunshine is displayed against a darker sky. A notable work, of considerable appeal, is to be seen in "The Bridge" (149), by F. G. Korth, and of small size, but none the less attractive for that, is No. 206, "Quai du Miroir, Bruges," by R. Midgley. It is very dainty, and its tone values are soft and exceedingly well blended.

There are comparatively few portraits, but No. 175, "Opal," by J. V. Dorin, is very distinctive in its delicacy of key, and, in the nudes, "Mural Section" (126), by R. G. Spencer, stands out in a class of work that is also not very fully represented.

Good work in this section is also sent in by G. L. A. Blair, Walden Hammond, Robert Chalmers, Marcus Adams, T. H. B. Scott, Will Till, Bertram Park, H. Cazneaux, J. Dudley Johnston, Monte Luke, Pirie Macdonald, G. L. Hawkins, Dr. Julian Smith, and many others.

The Science of Photography.

Most of us are vitally interested in the shutter speeds of our cameras. The actual speeds may differ quite considerably from those that are marked, and a method of determining the actual exposure and the efficiency of the shutter is the subject of one of the most prominent exhibits (1382). Another interesting item is that explaining the microspectrograph, an apparatus which records the optical properties of microscopically small crystals. The use of the X-ray in making examinations of old paintings is demonstrated, and, in a similar sphere, the medical applications of the same rays are also represented.

Further sections are devoted to astronomy, photomicrography, which will doubtless prove attractive to those whose interests lie in these directions, but a more universal appeal will be made by the examples of photography in the service of natural history.

Some of the exhibits are not only fine examples in their class, but make exceedingly pleasing studies, and, as a rule, their technique is above reproach. No. 725, "Fulmar Petrel in Flight," by H. S. Thompson, for example, is a remarkable study, and what appears to be unique in that it is the first time it has been photographed in this country is Ralph Chislett's "Temminck's Stint" (733). Another rare subject is his "Dartford Warbler" (734–5), and more good work in the same sphere is contributed by E. J. Hosking, H. E. Evans and V. H. Chargois.

Considerable progress in colour work on paper has been made during the year, but, while most of the examples on view might be said to represent their subjects accurately enough as far as a literal transcription is concerned, their treatment has quite a long way to go before it even approaches the pictorial standard achieved in monochrome. The colour prints on the whole are very good from the technical standpoint, but the most satisfactory are those in which strong vivid colours have been avoided. This is particularly the case in the dainty little print of a butterfly on thistledown by F. W. Westley.

New Apparatus.

In the section reserved for new apparatus, the miniature camera, in several varieties, is well to the fore, and there are many other fine examples of craftsmanship in other types of instrument. This section and other features of the exhibition will be dealt with in subsequent notices of the show.

The exhibition is open daily at the Society's house at 35, Russell Square, from 10 a.m. to 9 p.m., except on Tuesdays and Fridays, when lectures are being given and it will close at 6 p.m. The titles of the lectures were published in last week's "A.P." The show terminates on the 10th October.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

AFTER-HOLIDAY PRECAUTIONS

After the glamour of the holidays and the glut of exposures to be handled, the amateur photographer often neglects points which in his saner moments he would normally consider, and a reminder is therefore appended.

RETURNING from holidays is always accompanied by a sense of thrill, and sometimes with apprehension, for the amateur; since he usually has a large batch of exposed negatives to be developed and doubts already have begun to pass through his mind as to whether these exposures were carried out correctly, or whether something has gone mechanically astray with his instrument. This leads to one of the biggest pitfalls in the photographer's career; it means a rush to get them developed.

Press photography naturally needs haste, but for the ordinary amateur the policy is to go steady, and to do the processing at the same pace as he does the occasional exposures secured at week-ends or odd times.

Method in the dark-room is more essential at this time than at any other.

The Dark-room.

If the worker will remember that many of the exposures he is about to handle may never be possible of duplication, he will realise how essential it is that nothing shall go wrong with the more mundane processes of developing, fixing and washing. A little time spent on preparing the dark-room will tend to ensure this state of affairs. The bench should be arranged according to the nature of the material being handled, but, first, good fresh solutions should be made up for the occasion.

For developing, the amateur is wise who adheres to one formula, of which he already knows the capabilities, and a good supply of this developer should be on hand, so that the tendency to continue to develop in an exhausted solution is obviated. Fixing solution, being so cheap, can be provided in abundance, and should not be made up just before operations, as the difference in temperature of solutions may cause trouble. However, the wise worker always has a large supply of this ready for use.

Where water is not laid on into the dark-room, two or three buckets can be taken in to assume the temperature there prevailing.

The Bench.

For developing by hand either films, plates or film packs, a regular lay-out on the dark-room bench should be adopted and firmly adhered to. A large dish of clean water, and smaller dish of developer, and a different type of dish for fixer, is a very good arrangement. In the case of roll films this gives a natural sequence, putting the film through the water first until thoroughly limp, then through the developer for the allotted time, a brief rinse, and then through the fixer.

With plates, a large dish which will develop two at a time should be used, and care should be taken that the dish is kept rocking in all directions, and that the plates do not slip across one another. The preliminary rinse in water can be omitted when dealing with this type of material, although some workers do it with the idea of reducing pinholes.

Film packs can be developed in the same way as plates Two dishes of hypo are better than one, the negatives being passed from the first one to the second one after so long. The exhaustion of the first bath will soon make itself obvious, when the second one should be used in its place, and the first one placed second with fresh hypo. Thorough washing can be carried out in the bath if a large number of negatives have to be done, while siphon washers are quite reasonable now if the amateur feels inclined to invest in one.

Printing.

It is a very good rule to make contact prints or small enlargements from all negatives. It is much easier to judge the value of the picture on a print than from the negative, and it also provides a handy system of filing, since the negatives can be inserted in small envelopes with a print pasted on the outside.

Gaslight printing is by far the simplest and quickest way of doing small contact prints, say, from V.P. size upwards, though bromide paper will naturally have to be used to make small enlargements of miniature negatives. Gaslight paper can be purchased by the gross from reputable firms at a ridiculously low price, and will yield with ease good black-and-white prints suitable for albums.

Choosing Enlargements.

Naturally, every amateur will want to enlarge some of his holiday pictures, but there is no sense in wasting valuable sensitive material enlarging obviously unsuitable prints. In the first case the purpose for which the enlargement is desired must be decided upon, and the negatives sorted and placed in separate piles according to their class, and then these classes—Press, competition, exhibition—yet further sub-divided into piles that will require soft, normal or vigorous bromide.

This method will save much waste of valuable paper, and if a test strip of each grade is made the worker will also save much time, since he can do all the negatives of that particular grade at one time.

Press enlargements will need to be on glossy paper, but the other subjects will be a matter of the worker's own particular taste.

No attempt should be made to rush off these enlargements in one evening, as this will inevitably lead to disappointing results. Each negative should be treated as though it were about to produce an exhibition print, and handled accordingly.

The Negatives.

The simplest way to store the holiday negatives is to push them all indiscriminately into an old envelope and hope they won't get scratched, and every time you want a special one you sort out the lot. The thinking amateur will see at once how ridiculous this idea is. Transparent envelopes which can be inserted into a loose-leaf file or into a filing cabinet are the ideal, and these should be duly numbered and indexed. Not a very long job if you go to work with a will.

The Camera.

The extra work the camera has had to do will have made its mark on it, and it should be cleaned and well dusted before starting work at home again. Sand should be well shaken out of the case.

The LONDON SALON of PHOTOGRAPHY

First Notice.

THE Annual Exhibition of the London Salon of Photography the twenty-seventh of the series, was opened on Saturday last, the 12th September, at the Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London, S.W.1, and, no less than in previous years, shows a striking and attractive collection of all that is best in pictorial photography from all parts of the world.

This is not surprising when it is considered that, out of an entry of something between 4,000 and 5,000 from nearly thirty different countries, it is only possible to find space for just over 400 prints—one in ten—and the standard achieved in consequence is extremely high.

The Show as a Whole.

To the photographic visitor to the Salon this year the technical quality of the majority of the prints on view will make an important appeal. In no previous exhibition have modern printing methods been so fully and satisfactorily demonstrated. A considerable number are on Gevaluxe, but many that are not in this printing process run it very close for richness of the blacks and the range of tones presented. The workers from the Continent, particularly those from Austria, Hungary and Czechoslovakia, use glossy bromide paper for their exhibition prints, frequently of large size. These, when seen under glass, also have a depth of tone, coupled with high technique, which renders them of outstanding interest. This method of presenting exhibition work that will be shown under glass is worthy of attention by all regular exhibitors.

Again the Exhibition presents a notable example of careful and successful hanging; the universal adoption of standard size, light tone or white mounts—as first introduced many years ago by the London Salon—assists the arrangement of the pictures in well-defined lines. The grouping of subjects gives a vivacity and sparkle to the show that is attractive. The presentation of the show itself is a task that is evidently carefully considered by the Committee in addition to the selection of the finest pictures.

Apart from a tendency towards greater simplification in the arrangement of the subject material and an increasing avoidance of diffusing devices, there does not seem to be any marked departure from the normal treatment of the past few years. There are fewer " stunt " pictures and a greater number of straightforward representation of familiar subjects presented in the modern way, although most of the older members of the Salon continue on the lines of pictorial work with which they have become identified in the past.

Work by Members of the Salon.

This is notably the case with the veterans of the Salon, such as Alex. Keighley, J. H. Anderson, F. J. Mortimer, C. H. L. Emanuel, Pirie MacDonald, Leonard Misonne and Dr. E. G. Boon. The last named, however, has shown an indication in recent years of a more modern point of view, particularly in selection of subjects, and his still-life work is notable in this respect.

Marcus Adams, needless to say, deals effectively with child portraits in his own inimitable fashion, and C. J. Symes continues to show his mastery of the bromoil-transfer process on the grand scale. There are few workers to-day who can equal him in dealing with this particular process. Bertram Park continues to dally with the nude, and we miss his strong portrait work of the past, although some of his latest efforts have been towards theatrical photography with a miniature camera.

Among the newer members, G. L. Hawkins takes pride of place with his big landscape subjects made in Gevaluxe. These are easily the strongest prints in the show, and are treated with a bold, broad touch. Angus Basil's prints this year are stronger than usual and he has managed to infuse greater brilliancy into their treatment. G. L. A. Blair remains true to his ship pictures, of which several good examples are shown, and Harold Cazneaux represents Australia at its best in that his subjects are well considered and always decorative and technically perfect.

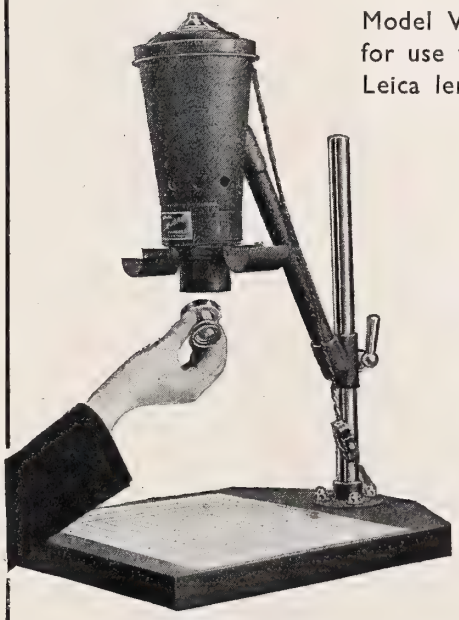
Two other Australian workers of outstanding merit this year are Dr. Julian Smith, with some fine portrait work, and J. Eaton, of Melbourne, whose dainty and expansive landscapes are always a joy to the artist. Pierre Dubreuil, of Brussels, another member of the Salon, shows prints on a larger scale this year, and, as usual, taken from uncommon viewpoints.

The King's Portrait.

The picture of the year, however, and the one that attracts the greatest attention, is also by a member of the Salon, Hugh Cecil. His notable portrait of the King, which was selected for the new stamps, forms the centre piece of one of the walls, and is a good reply to the critics who insisted that a painter and engraver should have been responsible for the new stamps.

Other work by members of the Salon are the small gum prints by Harold Leighton, and the sunshine effect by J. A. Lomax. A member's work that is missing from the present show, and which is generally very outstanding, is that of Ortiz Echague, of Madrid. We can only assume that the present troubles in his country have had something to do with his non-appearance on the walls of the Salon.

A print of particular significance is a fine silhouette group by the late Herbert Lambert. This is a notable contribution, and one that will not only attract attention but is a typical example of the work of a member whose loss is deeply felt.



Among the British workers whose prints call for attention after a first glance at the walls, are those by Leo Leigh, Rosalind Maingot, Walter Bird, who with Madame Yevonde takes the honours this year for the colour prints, which are finer than on any previous occasion, Harold Burdekin, Merlyn Severn, Ismay Taylor, H. A. Murch, Yvonne, John Ahern, Noel Griggs, Paul Shillabeer, Challoner Woods, Walden Hammond, Stuart Black and John St. Aubyn.

The foreign, American and Colonial workers, who are responsible for more than half of the complete Exhibition, will be dealt with in a subsequent notice, as theirs are among the most attractive pictures in the show. In the meantime, it should be noted that the Exhibition is open until October 10th, daily, from 10 a.m. to 6 p.m. (Sundays excepted).

For perfect enlargements from "Miniature" Negatives — use an

ENSIGN MAGNAPRINT

Super Speed Condenser Enlarger

Model V/OL for use with Leica lenses.

Model AV/O with Automatic Focussing.

Everyone who wishes to enjoy their hobby to the fullest extent, should experience the fascination of enlarging their miniature negatives with a Magnaprint. The condenser diffused lighting system employed produces perfect quality grainless enlargements from miniature negatives speedily and with a minimum of trouble.

STANDARD MODELS

Model V/O. For all miniature negatives, enlarges up to 15×10, with Ensar f/6.3 Enlarging Anastigmat **£4 15 0**

Model V/OM. As above with Magnar f/4.5 Enlarging Anastigmat **£6 10 0**

Model V/OL. For use with Leica lenses. As above but without lens. Including special carrier for Leica or Contax negatives .. **£4 10 0**

AUTOMATIC FOCUSSING MODEL

AV/O. For all miniature negatives, enlarges up to 15×12, with Dallmeyer f/4.5 Enlarging Anastigmat **£8 10 0**

ENSIGN "SPECIAL ASSORTMENT" PACKET OF BARNET BROMIDE ENLARGING PAPER. Enables you to use different grades, tones and surfaces without buying separate packets. Contains 12 assorted 1/1-pl. size sheets .. .. Price 3/-

ENSIGN, LIMITED, High Holborn, London, W.C.1

From those who Pen their Praise

All over the country enthusiastic photographers are recognising the advantages of NURO Film—the first All-British roll film—whose extra sensitiveness and "lastic latitude" place it ahead of all others in reliability and accurate tone rendering. Here are some recent opinions:

A GREATER PERCENTAGE OF GOOD RESULTS ....

L. B. (Edinburgh), writes:—

"I am not backward in cursing products that I do not find satisfactory, so do not let me hesitate to commend you on your very satisfactory roll film. I have used during these last few months about two dozen and a half. . . . and I have had a larger percentage of good results both in electric light and daylight. . . . and find the grain of these films quite fine for enlarging up to full plate size. . . ."

REMARKABLE PROOF OF GREATER LATITUDE...

A. A. M. (Kelso), writes:—
"I feel under an obligation to forward you the enclosed photographs. Unable to reconcile your claims in regard to the latitude of NURO film with its very modest price I subjected it to a very exacting test by exposing a 6d. film on one subject in a series of quick snapshots, allowing myself time to make, and note, changes in aperture and exposure settings. These varied from f/16 to f/6.3, and from 1/100th sec. to 1/25th sec. Thereafter the film was developed . . . and yielded, much to my astonishment, six very excellent negatives. . . . Such consistent results have encouraged me to send you the results of my test."

SURREY AMATEUR MAKES A DISCOVERY...

A. S. (Horley), writes:—

"I should like to tell you how delighted I was with the results. They were exposed behind a focal-plane shutter, at exposures rating from 1/25th of a second to 1/80th of a second, and although exposed under very different conditions of lighting, the results were excellent in every way; gradation of tone was excellent, and none of the highlights showed the slightest suspicion of clogging. Where figures were taken under trees, detail was in evidence in the darkest shadows."

SPEED
27° SCHEINER

NURO FILM

. . . . . *the master film that has amazed the photographic world*

Obtainable through all branches of Boots The Chemists, Timothy Whites & Taylors, Taylors Dispensing Chemists, and from all progressive dealers.

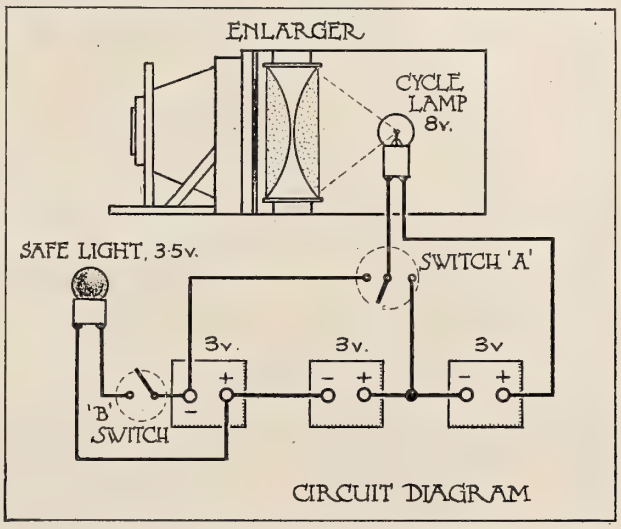
THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Readers' Hints, Tips and Gadgets

USING A MINIATURE ELECTRIC LAMP FOR ENLARGING.



THE condenser of a projector can use only light coming from a source small in area. Indeed, in theory, the only usable light in a lantern is light coming from a point. Therefore, in an illuminant, compactness of source is as much to be considered as is candle power.

There are on the market special cycle lamps that use an 8-volt miniature screw bulb and two pocket lamp batteries connected in series. The filament of the bulb is very close coiled.

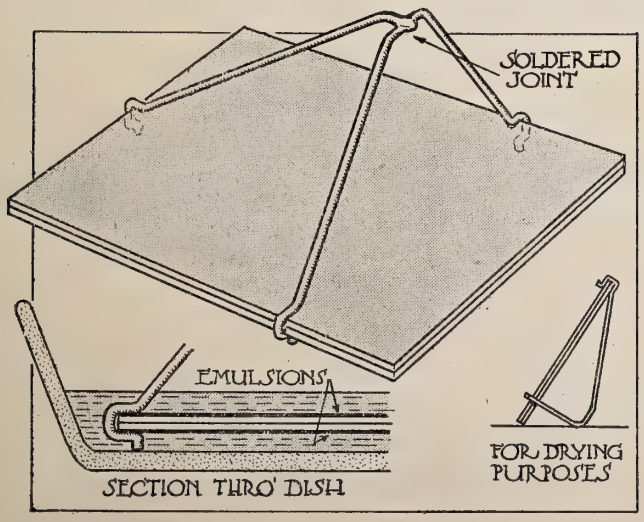
With one of these bulbs in an enlarger, surprisingly short exposures can be given. The bulb needs no ventilation at all, so it is easy to make an enlarger out of an old bellows camera and the lamphouse need be only a wooden box.

Instead of using two pocket lamp batteries I use three two-cell lamp batteries. With these bigger capacity batteries, and using short lengths of thick wire for leads, the resistance of the circuit is low and the 8-volt bulb is being slightly overrun, and so you get the same high-actinic effect as you get in the overrun lamps used for night portraiture.

I house the batteries in a box with two switches. One position of switch A allows the full voltage of 9 volts on to the lamp in the enlarger and the other position connects only one of the batteries of 3 volts to the lamp and this gives a faint image, noticeably red in colour and of very low actinic value. The bromide paper can quite safely be positioned with this weak light on, so that there is no need for an orange lens cap. The other switch, B, lights an amber-covered lamp for the safe-light. This lamp has got a 3.5-volt bulb in, but only one battery is used for it. This gives quite enough light and uses but little current.

It is impossible to short-circuit any of the batteries, and it is of no consequence if both lamps are illuminated. H. J. HINE.

LOCAL CONTROL DURING DEVELOPMENT.



SOMETIMES it is desired to make certain parts of a print appear with a lighter tone than that which would prevail if a straight print were made from the negative. The part required to be "held back" may be so small or so sharply defined that the usual methods making use of a small piece of cardboard, cut to shape, or a piece of cotton-wool held on the end of a piece of wire, would cause risk of adjoining parts being affected.

I have found the following method of control to be quite satisfactory if a little care is exercised. A solution made up as follows, and a camel-hair brush are the only accessories required in addition to those in use normally during printing.

Potassium bromide	50 grs.
Glycerine	½ oz.
Water	½ oz.

The correct exposure for the print is found in the usual way and the print is placed in a dish with a normal developer diluted to quarter strength to allow more time for watching progress. The first appearance of the image is noted, and when the portion that is required to be held back has *nearly* reached the strength desired in the final print, the developer is quickly poured off, and replaced with water. The print is allowed to remain in this water bath for a few seconds, and the water is then drained off. The camel-hair brush is now charged with the above solution, and the part that is desired to be held back is covered over with the solution. Care must be taken that none of it is allowed to get on to any other part, as this solution has the effect of stopping any further action taking place.

The solution is allowed to act for about a minute, after which it must be removed carefully and quickly with absorbent cotton-wool. A normal strength developer is now poured on to the print, and development continued until the print has attained its full strength, after which it is removed from the developer, fixed and washed. The area concerned will now be found to be of the right tone value and is quite permanent and free from stain. D. ALDWYN JAMES.

A HOLDER FOR GLASS NEGATIVES.

A USEFUL holder for handling glass negatives, either one or two at a time, while being processed in the darkroom can be easily made from a length of springy brass or zinc wire bent to shape as shown in sketch.

If the ends are given sufficient room it will be found that two plates, back to back, can be processed at the same time. The underneath wire end should give adequate space for the lower plate and keep the emulsion clear of the dish, as shown in the lower left-hand sketch in the illustration.

Care should be taken to wash and dry the holder after it has been in the hypo bath, or, better still, make half a dozen or so and leave them on the negatives until washing is complete. One can then be sure that no hypo will be carried into the developer when work is commenced on a new batch of plates.

The use of this little accessory entirely eliminates the bugbear of scored negatives through the accidental scratching with a finger-nail, and as the finger-tips do not touch the developer pyro users will find the usual stains noticeable by their absence.

These holders also make excellent substitutes for a drying rack. If the plates are swabbed of superfluous moisture they can be re-inserted and hung up out of the way or laid on one side of the wire, as shown. C. M. CROSBY.

By F. READ.

Autumn Leaves.

PICTURES taken from the water's edge are usually very attractive. For some reason the novice "falls" for a water picture every time, until the time comes when he is able to criticise his own work. He then realises that successful pictures of this type of subject need more skill and thought than he at first devoted to them. Water attracts in very much the same way as do the glorious greens of spring and russets of autumn; both so often are met with on one's rambles, and both appeal to the eye for their colour. Transferred into monochrome and bereft of this attraction the average "water picture" of the novice becomes an uninteresting mass of heavy tone with reflection of the sky as glaring patches of unrelieved white.

Even the advanced worker finds some difficulty in avoiding these arresting areas, and sometimes adopts the time-honoured trick of throwing a stone into the near "foreground" so that the spreading ripples may induce the observer on viewing the print to say, "How pretty." I have never tried the stone-throwing, but am in agreement with the fact that ripples do, at least, help to break the monotony of most water surfaces.

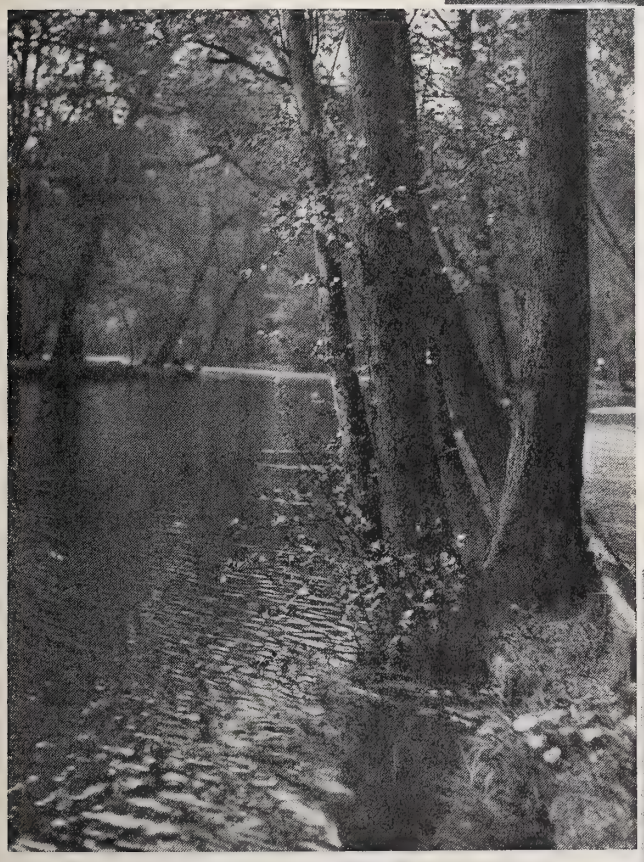
If a picture is taken of still water and the high-lights are too prominent, or if the patches of sky showing through the branches and leafage of the trees are disturbing to the general effect, some effort must be made to reduce their intensity. Correct procedure, of course, is to curtail the time in the developer of such subjects, or to utilise the tank method of development which is ideal for securing the maximum amount of detail and tone gradation without overdoing the density of the high-lights.

The Swan's Nest.

Reflections.

Should a negative be inadvertently over-developed the persulphate reducer may be tried. This chemical tends to attack the high-lights first, and the negative is removed from the solution when action is considered to have gone nearly far enough. Generally, however, Baskett's reducer is to be

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

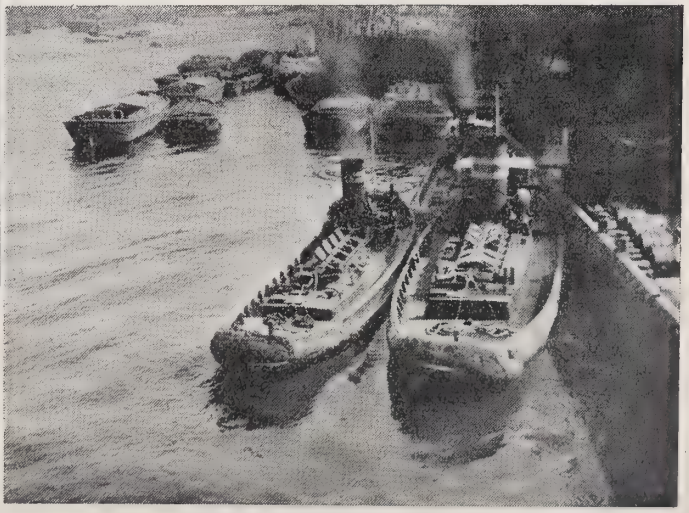


WATER'S EDGE

The high viewpoint.

preferred for local reduction, as it is more under control.

Composition is often a difficult problem with these subjects. The wise worker will soon eschew the ordinary lake scene with its vast stretch of water in the foreground running half-way up into the picture space, and try simpler arrangements with strong foreground objects. An ideal method is to alter the viewpoint to get some object such as a group of trees, a boat or even a swan in one of the strong points of picture area to give the eye a definite spot to rest on.



A Shady Corner of the Lake.

Sunshine for once in photography is not the great asset it can be in other types of work. It can catch the thousand leaves that sometimes are in the background, and cause a myriad high-lights that are irritating to the eye. An autumn day when the light is softly diffused with light clouds is ideal, and will give negatives that are full of softly flowing gradations. When experience has been gained, then is the time to try bolder schemes of lighting.

Reflections can often be used with good effect. In two of the prints reproduced effective use is made of these. A comparatively high viewpoint, with the camera pointing down to cut out the sky, is a good plan to follow. If "against the light" pictures are attempted care must be taken that the water does not reflect the sun into the lens.

"Water edge" subjects are within the range of every camera, though admittedly the instrument with a focussing screen the full size of the negative in use enables the picture to be more easily studied and composed. A tripod is a distinct asset on many occasions, particularly when a snapshot exposure is out of the question.

Dockside.

Church Photography *with a "Brownie"*

PHOTOGRAPHY of church interiors is sometimes regarded by the novice as the privilege of the man with an elaborate camera fitted with a rising front, tilting back, wide-angle and other special lenses and similar luxuries. The greater part of the inside of the average church can, however, be photographed quite well with a box "Brownie" or the simplest type of folding camera. A tripod or other firm support is, however, necessary, as the exposures are never short.

The chief snag is generally the height of the roof. Fortunately churches usually conform to a certain scale; those with high chancels and naves are usually fairly long.

Church interiors can be taken on any bright day, even during the winter months. Most people will, of course, prefer the summer months, as many cameras hibernate!

Exposures.

These should rightly be calculated with a meter, but what "Brownie" owner is likely to run to a photo-electric meter? A good calculator such as "Burroughs & Wellcome" or "The A.P." recent gift exposure calculator gives excellent results. The shorter the exposure the less likely is halation to appear round the edges of the windows. but it is always better to err on the long side for general work. If time allows, it will show sharper definition if the smallest stop is used. The exposure is increased proportionately, but the results are well worth the extra time taken.

My own film preference is Agfa Isochrom, but any film of the 'chrome variety with anti-halation backing will show good results. At the moment of writing I have not tried panchromatic film, which should be much better for coloured subjects such as stained glass windows, etc.

A typical font.

Choice of Subject.

The number of exposures possible will depend on the style and size of the church. A big church in the Perpendicular style of architecture will show a bewildering number of possible shots. The general architecture can usually be covered by three to six exposures.

Assuming the church to consist of nave, chancel and aisles, the east end and the west view can usually be taken without much bother. A book or two slipped under the tripod leg will sometimes prove helpful. If the aisles are sufficiently attractive, take a picture of the more interesting end. One or two pictures taken diagonally across the church will completely record the main building.

The font is usually worth at least one picture; some, with their carved panels, are worth a whole roll of film apiece. Some of those beautifully carved and coloured Tudor memorials are worth taking, while mural paintings, brasses, and bench-ends should not be overlooked.

Chancel with rood-screen.

If the photographer shows proper interest, he may be allowed to photograph the plate and other treasures usually locked away.

I should like to conclude with words of advice, warning and encouragement. First get permission from the rector or vicar. This is usually freely granted. Do not forget to offer him copies of what you take; he may not accept them, but gratitude has never hurt anybody yet. Finally, do not be afraid of the subject. The accompanying illustrations were all taken with a box "Brownie," with a portrait lens when necessary for the close-up subjects.

W. E. CROPLEY.

SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES

The cameras listed below represent a selection from our stock of second-hand apparatus. Every second-hand camera we receive is subjected before re-sale to the most careful scientific tests, and must satisfy our mechanic as being in every way perfect. We issue in each case a written guarantee of mechanical and optical order ; a second-hand camera may, in fact, be purchased from us with the confidence one usually associates with new apparatus.

Agfacolor Filter No. 30, to fit new-type hood..11s. 6d.
Pressure Back, for plate back attachment....11s. 6d.

As is generally known, the firm of R. G. Lewis is the only one of its kind specialising exclusively in miniature apparatus. As miniature camera specialists, we are able to offer unequalled facilities and special services to miniaturists.

We stock every kind of miniature negative material, including, of course, colour films, and a large variety of 3×4½ cm. plates used in the Contax and Contaflex plate backs. We have every one of the special fine-grain developers obtainable in Great Britain as well as all the books published to date on Miniature Photography. We would particularly draw attention to OUR UNIQUE PROCESSING SERVICE FOR THE MINIATURE CAMERA USER (we are the only people undertaking exclusively the processing of the Leica size film) and to our MINIATURE CAMERA REPAIR SERVICE. Full particulars of this service will gladly be sent upon request.

Register with us for your free Monthly Copy of "Leica News and Technique," as well as the latest lists of makers' booklets.

The Leitz quick winder attachment "S.C.N.O.O." may now be seen in our showroom, and we shall be pleased to demonstrate this accessory to interested clients.

MISCELLANEOUS CAMERAS :

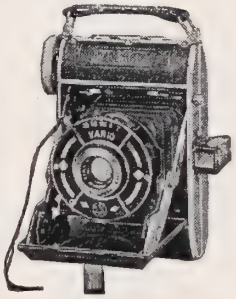
2¼ square Zeiss Ikoflex Reflex, f/6.3 Novar lens..£4 17 6
2¼ square Zeiss Ikoflex Model II, f/3.5 Zeiss Tessar lens, Compur Rapid shutter.....£17 5 0
Makinette 4×3 cm., f/2 Supracomar lens....£15 15 0
Exakta Model A, f/2.8 Tessar lens, leather case (choice of 2).....£18 10 0
Exakta Model A, f/1.9 Dallmeyer Super-Six lens, leather case.....£21 15 0
Exakta Reflex 2¼×1⅝, f/4.5 Meyer Goerlitz lens, shutter speed 1/25th to 1/500th sec., leather case..£9 15 0
Exakta Model A, f/3.5 Ihagee anastigmat lens, shutter speeds from 1/25th to 1/1,000th sec. (choice of 2) £11 17 6
Exakta Model A, f/3.5 Zeiss Tessar lens, shutter speed as above (choice of 3) £13 17 6
Exakta Model B Multispeed, f/2.8 Zeiss Tessar lens, shutter speeds from 1/1,000th to 12 secs., delayed action, case (choice of 2).....£21 10 0
Baby Ikonta, f/4.5 Tessar lens, Compur shutter (choice of 2).....£6 17 6
4×3 cm. Rodenstock, f/2.9 Trinar, Compur shutter, leather case.....£4 17 6
4×3 cm. Baldi, f/2.9 Trioplan lens, Compur shutter (choice of 2).....£6 15 0
2¼×1⅛ Planovista, f/2.7 Makro Plasmat lens, leather case £10 17 6

MISCELLANEOUS CAMERAS—contd.

4×3 cm. Voigtlander Perkeo, f/3.5 Skopar lens, Compur shutter.....£5 17 6
Miniature Marvel, f/2 Xenon lens, Compur Rapid shutter £11 5 0
Welta Perfecta, f/3.5 Trioplan lens, Compur shutter, case £11 17 6
Kodak Duo, f/3.5 Kodak anastigmat lens, Compur shutter, case.....£7 15 0
Ditto, f/4.5 Kodak anastigmat lens, 3-speed shutter (choice of 2).....£4 2 6
Kodak Retina, 35-mm. film, f/3.5 Xenar lens, Compur shutter.....£6 17 6
Voigtlander Bessa, 3¼×2¼, f/4.5 Skopar lens, Compur shutter.....£6 17 6
4×3 cm. Piccochic, f/2.9 Vidanar lens, Compur shutter (choice of 3).....£4 10 0
4.5×6 cm. Baldax, 16-on-3¼×2¼ film, f/3.5 Trioplan lens, Compur shutter (choice of 2).....£5 15 0
Planovista, 2¼×1⅝, f/3.5 Trioplan lens, Compur shutter £7 17 6
Nagel Vollenda, 2¼×1⅝, f/4.5 Radionar lens, Telma shutter £3 17 6
Voigtlander Brilliant, 2¼×2¼, f/6.3 Voigtar lens, 3-speed shutter, leather case.....£2 19 6
Foth-Derby, 4×3 cm., f/3.5 anastigmat lens, focal-plane shutter £3 12 6
Ditto, f/2.5 anastigmat lens (choice of 2).....£5 5 0
4×3 cm. Dolly, f/2 Xenar lens, Compur shutter £11 17 6
Voigtlander Superb, 6×6 cm., f/3.5 Skopar lens, Compur shutter, leather case.....£11 17 6
Welta Camera, 16-on-3¼×2¼ film, f/2.8 Tessar lens, D.A. Compur shutter.....£18 5 0
Nagel Pupille, 4×3 cm., f/3.5 Leitz Elmar lens, Compur shutter.....£9 9 0
Voigtlander Virtus, 4.5×6 cm., f/3.5 Heliar lens, Compur (choice of 2).....£7 19 6
520 Ikonta, 16-on-3¼×2¼, f/3.5 Zeiss Tessar lens, Compur shutter.....£8 12 6
Super Ikonta Model 530/2, f/3.8 Zeiss Tessar lens, Compur Rapid shutter, ever-ready case (choice of 3) £18 17 6
Super Ikonta Model 530/2, f/4.5 Zeiss Tessar lens, Compur shutter, leather case.....£14 5 0
Super Ikonta Model 530, 16-on-3¼×2¼ film, Compur shutter.....£13 10 0
Super Ikonta Model 530/16, 11 pictures 2¼×2¼, f/2.8 Zeiss Tessar lens, Compur shutter, ever-ready case £23 17 6
Super Ikonta Model 530/16, f/3.5 Zeiss Tessar lens, Compur shutter, ever-ready case (choice of 2) £19 17 6
Zeiss Ikonta Model 520, 16-on-3¼×2¼ film, f/4.5 Tessar lens, Compur shutter (choice of 2).....£7 7 0
Super Neitel, f/2.8 Zeiss Tessar lens, leather case £17 15 0
Ditto, f/3.5 Triotar lens.....£13 17 6
Zeiss Kolibri, 16-on-V.P. size film, f/3.5 Tessar lens, Compur shutter, de luxe case.....£6 17 6
Contaflex, f/2 Sonnar lens, ever-ready case..£55 0 0

ENLARGERS :

Praxidos Enlarger, without lens, for use with Zeiss Contax lenses, complete with any voltage lamp £8 17 6
Foth Enlarger, for negatives up to 4×4 cm., complete with orange filters and lamp.....£5 15 0
Exakta Enlarger, Model II, automatic focussing, for 2¼ square negatives.....£15 0 0
Leitz Focomat Enlarger, complete for use with any Leitz lens. New condition.....£12 12 0
Fotofex Enlarger, for Minifex or any 16-mm. negatives £6 17 6
Miraphot Enlarger, V.P. size, with f/3.5 Tessar lens, negative carrier, lamp, etc.....£7 17 6
Exakta Luminax Enlarger, for use with Exakta lenses £3 15 0
Filmarex Enlarger, for 2¼×2¼ negatives, f/4.5 anastigmat lens. Shop-soiled only.....£9 17 0
V.N. Enlarger, for 3¼×2¼ negatives, with special adapter for Leica negatives.....£6 10 0
Ensign Magnaprint Model H.I. Horizontal, for 3¼×2¼ negatives £2 12 6
Leitz Box-form Enlarger, for daylight enlarging, 24×36 mm. negatives up to 6×9 cm.....£2 12 6
Ditto, but for 9×12 cm. enlargements.....£3 17 6
Leitz Valoy Enlarger, for use with Leica lenses, complete with any voltage lamp.....£7 17 6



R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

ALWAYS ABUNDANCE

There is always abundance—in stocks, facilities, and service in all its aspects . . . at the "Four Westminsters." Whatever your needs and wishes, "the Westminster" will meet them to your utmost advantage. And you can always depend upon obtaining the best possible EXCHANGE and OUT-OF-INCOME terms . . . at "the Westminster." (Everything Photographic—Ciné and "Still.")

Typical 'WESTEX' Value

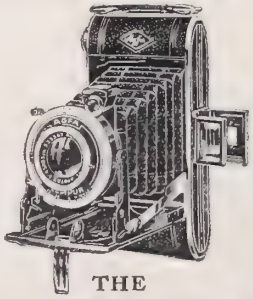
Obtainable only at the WESTMINSTER

THE "WESTEX MINIATURE"

A most efficient high-precision camera at a marvellously low price. 16 pictures 4 × 3 cm. on standard V.P. spool. Splendid results, easy manipulation. Quick, self-erecting front, f/4.5 Vidanar anastigmat lens, focussing down to 3 ft., Vario shutter, 1/25th, 1/50th, 1/100th sec., T. and B. Direct-vision optical finder. Beautifully made, very compact, slips easily into your pocket.
Price (as above) ..... £3 : 12 : 6
Nine monthly payments of 8s. 7d.
With Radionar f/2.9 anastigmat and Prontor shutter, 1 to 1/175th sec., T. and B..... **£5 : 12 : 6**
Nine monthly payments of 13/2.

AGFA "SPEEDEX"

Improved Models

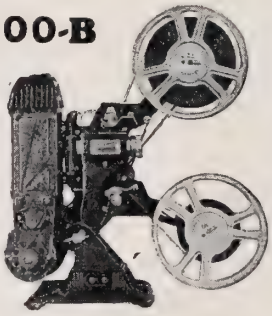


Takes standard V.P. roll films. Fitted f/3.9 Solinar anastigmat, in Compur shutter, speeds 1 to 1/300th sec., T. and B., self-erecting front, optical direct-vision finder..... **£5 : 5 : 0**
Nine monthly payments of 12/3.

3½ × 2½, f/4.5 Agfa Solinar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. .... **£7 : 7 : 0**
Nine monthly payments of 17/2.

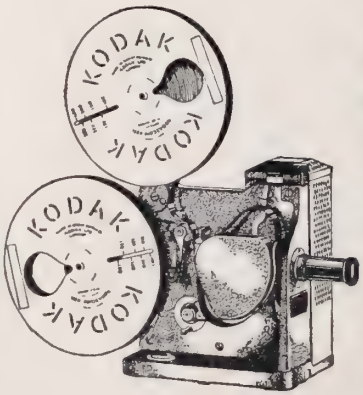
As above, but with Compur Rapid shutter, speeds 1 to 1/400th sec., T. **£7 : 19 : 6**
and B.
Nine monthly payments of 18/8.

AGFA SPEEDEX RECORD



F/4.5 Apotar anastigmat, delayed-action Prontor II shutter, 1 to 1/150th sec., T. and B. **£5 : 5 : 0**
Nine monthly payments of 12/3.

THE



PATHESCOPE 200-B

9.5-mm. Projector

Fitted with highly efficient 200-watt direct lighting system, giving a brilliant screen picture 10 ft. wide. Flickerless projection. Very compact. Fan-cooled and asbestos-lined lamphouse. Simple threading. Universal tilting movement. Motor rewind, for use on A.C. or D.C. supply, complete with lamp and motor drive for use on 100-volt circuit, 300-ft. empty reel and flex ..... **£15 : 0 : 0**
Nine monthly payments of 35/-.

Resistance for use on voltages 200 to 250, extra ..... **£1 : 15 : 0**

KODASCOPE MODEL "D"

Gives a brilliant, steady picture, 40 × 30 in. at 14f t. Takes 400 ft. of 16-mm. film, amply sufficient for fifteen minutes continuous running. "Stills" at will, and rapid rewind. Smooth-running motor drive, just plug-in to house supply. 300-watt lamp, fan-cooled lamphouse.

With supplementary resistance, splicing and oiling outfits ..... **£25 : 0 : 0**
Nine monthly payments of 58/4.

IMPROVED Model DEKKO Cine Camera

For 9.5-mm. With 20-mm. Dallmeyer anastigmat (fixed focus), interchangeable mount, variable speeds, half to normal and slow motion, 64 pictures per sec., single picture device, spring drive motor taking full 30 ft. at one winding, built-in telescopic finder. Body of wear-resisting Bakelite, outside fittings, film gate chromium-plated... **£6 : 18 : 6**
Nine monthly payments of 16/2
F/2.5 Taylor-Hobson anastigmat (fixed focus) ..... **£7 : 16 : 6**
Nine monthly payments of 18/3.
F/1.9 Dallmeyer, with micrometer focussing.... **£10 : 18 : 6**
Nine monthly payments of 25/6.

NEW MAGAZINE CINE-KODAK

Remarkable Production!

Charger loaded in 50-ft. 16-mm. film in 3 seconds. Film instantly interchangeable, e.g., Kodacolor to black-and white, and vice versa, without any loss of footage. F/1.9 Kodak anastigmat, option of four telephotos 2 to 6 in., universal finder. Ask for full description, or call and see. Complete in leather case.

£40 : 0 : 0
Nine monthly payments of 93/4.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLI.

Mr. LANCELOT VINING.

From information communicated to our Special Representative.

"I AM a 'miniaturist,' and have always taken the standpoint that the real use of the miniature is to carry on photography where other cameras have left off. Now that I am trying to practise what I have always preached I find my sphere of activity is very limited, and as a result pictures up to the standard for exhibition are few and far between; so much so that I collect the pictures from which I derive real pleasure, and keep them in an album which I call my 'Tonic.'

HOT MUSIC. *Lancelot Vining.*

"Eighty per cent of my work is done by artificial light, which includes photo-floods, but never flashlight or Sasha-light; and I work in film studios, theatres, etc. I know of no more enjoyable way of spending an evening than sitting in the first or second row of the stalls at Covent Garden Opera House, photographing the ballets. The more spirited the dancing the better I like it, but I always feel that the men in charge of the lighting are more against me than for me.

"I like my pictures, where possible, to contain action; my greatest handicap is that in this class of work I rarely have any control over my subject, the placing or lighting; very often I cannot even choose my position. Taking this into consideration, and the fact that a great many of my exposures are near the border-line of under-exposure, it is not to be wondered at if I sometimes lose heart, and feel like changing to easier subjects. This is where my 'Tonic' has to be taken in large doses, and it has never yet failed to restore my enthusiasm.

"My camera is the Contax II, having combined range-finder and view-finder—the most important improvement in miniature cameras this year. I have three Sonnar lenses—2-in. f/1.5, $3\frac{3}{8}$-in. f/2, and $5\frac{3}{8}$-in. f/4. I also use the Contameter optical near-focussing equipment.

"When the light is weak, or I have to work fast, I always use the Agfa ISS film, but when I can be sure of plenty of light I prefer Agfa F or Zeiss Pernox. I develop with Johnson's Fine Grain when near the under-exposed mark, and with Supramin or the new Meritol when exposures are ample. I use a Sixtus light meter, and develop by time and temperature.

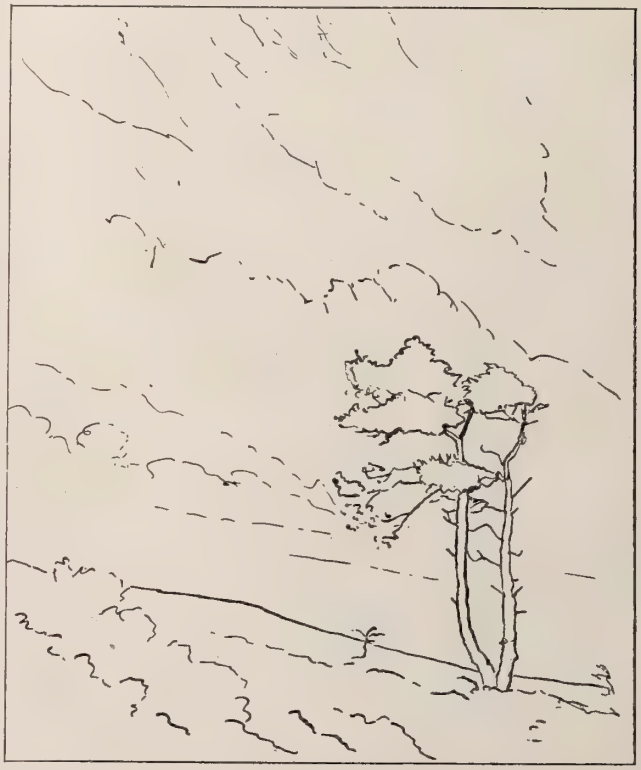
"'Hot Music,' reproduced on this page, is a twenty-diameter enlargement from a very small portion of the negative. I used the $3\frac{3}{8}$-in. lens at f/2 from the fourth row of the stalls. 'Gipsy Love' was taken on the 'set' during filming, at 1/100th of a second with the 2-in. lens. I could have waited for a posed 'still,' but I wanted these two Hollywood stars in action, and not 'dead'."

(*A further example of Mr. Vining's work is reproduced on one of the centre Art pages.*)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"A WIND ON THE HEATH," *by Mrs. K. M. Parsons.*



THAT the suggestion of wind intimated by the title is amply sustained by the picture is evident at a glance. It seems apparent, too, that this impression inspired its creation, but the feeling of luminosity, perhaps, is no less attractive, and the two effects rank jointly and equally as the motive.

Much of the sense of movement of the wind arises from the prevalence of lines of an angular tendency. Just as verticals or horizontals create an impression of quietude or absence of motion, so do lines that are inclined at an angle suggest movement or unrest. The line where the hillside meets the sky, for example, is inclined at an angle to the baseline; the tree leans to the left; and the lines of the clouds, if tending more to the horizontal near the sky-line, soar upwards from right to left in increasing measure as they approach the top. Moreover, the way the foliage of the tree is all disposed towards the left-hand side heightens the impression considerably, and not only suggests that the wind has a more than ordinary force, but that in direction it is coming from the right.

The other motive—the feeling of luminosity—follows upon the way the gradations of the sky are disposed and the way the darks of the landscape and tree are contrasted against its brightest portions.

There is a gradual deepening in tone from horizon to zenith. The lights and shadows of the clouds intervene and provide a measure of variety and relief, but the general tone gets darker as it ascends. At the base, where the light is strongest, the intense dark of the tree stresses its brilliance, and the feeling is further heightened by the darks of the foreground immediately below.

Both suggestions—wind and light—are strongly and powerfully suggested, and the picture attains a considerable measure of success in their portrayal.

It does occur to one to wonder, however, whether it was entirely necessary to extend the contrasting tones over so wide an expanse. It rather conveys the idea of over-accentuation and creates an impression that almost amounts to harshness. It is true that, with such a wind, it is very likely that the atmosphere would be unusually clear and no suggestion is made that the rendering departs from actual truth, but it is no less a fact that, had it been found possible to introduce an intermediate tone between the dark of the landscape and the light of the sky, much of the suggestion of harshness would be avoided.

Such an intermediate tone could be furnished either by a stretch of distance or by a greater depth of tone in the sky for about an inch above the line of the edge of the landscape. Neither, it would seem, was available at the time of exposure, though, possibly, a bit of dodging about with the viewpoint might have produced something in the nature of a distance. At present, it seems rather low, and from a higher standpoint it may be that a further stretch of country would be visible, but this could only be determined on the spot. It is problematical, too, if any reasonable amount of waiting would have been rewarded by a better disposition of the sky, so that the only remaining alternative is the adoption of a measure of local control.

It would not be a difficult matter to anyone with a moderate facility for draughtsmanship to introduce the suggested modification either in sky or landscape. It could be done by oil reinforcement; conté crayon or powder colour well rubbed in; or by local extra printing. Whichever is most familiar could be tried, for the method is immaterial provided the working-up is indiscernible. Properly carried out, the revision would show a considerable advantage over the present rendering, and the trouble would be well worth while.

In other respects, the work is well designed. The tree makes an effective centre of interest, and, with its forceful placing, holds the composition well together. The lines fall very happily into place, and, radiating from the tree, tend to emphasise its dominance, while the excellent rendering of the foreground indicates an adequate exposure.

The choice of a low position for the horizon is in accordance with the best traditions of landscape composition, and with the resulting large expanse of sky, the joint motives, which depend upon it to a large extent, are well and truly expressed.

But that hard sky-line *is* a drawback and appreciably diminishes the appeal of what is otherwise a most promising piece of work.

It should be noticed that the actual material employed is simple and familiar, but the atmospheric conditions are naturally a matter of chance.

"MENTOR."

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

UP and down this country of ours there are innumerable bridges. There are bridges over roads; railway bridges of all types and descriptions; bridges over streams and rivers; town and country bridges, and all of them seem to possess a power of attraction that, suitably treated, may form the subject matter for our pictures.

Subject and Treatment.

No. 1 of the prints reproduced on the opposite page—"Solitude," by L/c. T. Woods—shows a bridge over a stream, bordered on each side with foliage. It is seldom that a broadside-on view is successful, but, in this instance, it gets across very well, possibly because the amount of the bridge that is shown is more restricted than usual, and does not present that uncompromising appearance that is only too common when this viewpoint is chosen.

The upper edge of the balustrading makes rather a hard line against the sky, and, if more tone could have been obtained in the latter, or more light on the bridge so as to lessen the contrast between them, the effect would be much better.

In the case of No. 7, "An Ancient Bridge," by Miss M. Reynolds, the point of view again is almost broadside on, and again not a few of the drawbacks have been countered by the introduction of masses of foliage on each side. The reflections lend an added interest, and the sunlight on the bridge confers something in the nature of a pictorial appeal.

Still, it does seem as though something a little more attractive in arrangement could have been secured from a standpoint nearer the bridge and looking more to the left, for this would show it at an angle and render its lines to better advantage. It might not be feasible to include the whole of the structure, but that is a minor consideration, and what would be shown would, or should be, perfectly adequate.

Angles of View.

It often happens that a section of a bridge, if properly handled, makes up much better than if an attempt to include the whole is made, a point which is exemplified in No. 4, "The Mill Bridge, Lucerne," by W. G. Williams.

Here, the angle of view has been very well chosen, and not only does it give a better idea of the character of the structure than if a greater proportion were shown, but it also provides a composition of quite attractive lines, much better, in fact, than any of the others on the page.

Nevertheless, it suffers from a very regrettable lack of tone in the sky, and much more might be made of the sunshine. Supposing the gable end of the building in the rear were a little brighter in tone, as it should be, and the sky, instead of being an almost unrelieved white, were rendered in a tone that would correspond with a visual impression of its blue.

A Pictorial Impression.

The result would be infinitely more pleasing and something approaching a real pictorial impression would be achieved. It would make a picture in place of the existing presentation, which, in effect, amounts to little more than a record of the place.

It is quite a good one, all the same, but there is a distinct difference between the two classes of work, and, naturally enough, the pictorial ranks considerably the higher.

No. 5, "Red Arches," by Miss D. W. Stratford, scarcely shows any better rendering of the sky, and, again, the broadside view of the bridge does not show it to the best advantage. It is, too, very much inclined towards a central placing, though, in this respect, it could be corrected by trimming three-quarters of an inch from the base and a quarter of an inch from the right-hand side.

The probability is that more tone in the sky could have been secured with the aid of a sky filter in both cases, and that, in connection with No. 4, the sunlight would be rendered with greater vitality and vividness. The expedient is one that is worth trying, and, in nine cases out of ten, it will prove of decided service. Another print in which it would have been a help is No. 6, "Saltash Bridge," by R. V. Bovett, but here the issue is complicated by a general excess of contrast throughout. The defect could be countered either by reducing the time of development of the negative or by the substitution of a softer grade of paper for that at present employed.

Unusual Aspects.

Nos. 2 and 3, "Suspension Bridge," by Dr. K. B. Allan, and "The Viaduct," by I. Coulter, show an uncommon aspect of the respective bridges, but it is extremely doubtful if anything more than an impression of eccentricity is conveyed.

To attain even a slight measure of success, examples of this type must be exceptionally well done or they fail to achieve the original intention.

No. 2 is technically sound in its photography, but there is little that is artistically attractive in such a rendering, the unsupported right-hand part of the bridge creating a highly undesirable feeling of instability. No. 3 seems somewhat underprinted; is equally deficient in stability, and, on account of the proximity of the viewpoint, presents an impression of over-restriction.

They do, however, reveal an appreciation of the fact that the best view of a bridge is to be obtained from an angle, but the departure from the normal way of looking at things on the level quite spoils any advantage that might otherwise have accrued.

The Normal Standpoint.

It is far better—at least, until a thorough mastery of the technique of picture-making has been attained—to stick to the straightforward ordinary way of looking at things, and to refrain from endeavouring to take a short cut to success by such dubious means.

Reference to reproductions which appear on our centre pages from time to time, and which do show a departure from the normal standpoint, also indicate that, in the majority of cases, the deviation is only incidental and occasioned by the nature or disposition of the subject material. There is justification for it, and, in scarcely any instance can it be said that the departure was made with the sole idea of achieving abnormality.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

PANORAMIC LANDSCAPES.

THERE was an article a week or so back on photographing wide open spaces, and the two illustrations accompanying it showed how pleasant such subjects can be when properly selected and arranged. For a good many years now, pure landscape, whether open or not, has not received as much attention as it formerly did, and this applies to painting as well as to photography.

It would be easy to state many reasons for this comparative neglect. After a time there may be, I hope, a reaction towards the quiet charm or dramatic impressiveness of landscape, but there will always be healthy minds and understanding souls to appreciate such things. Views of mountainous country always seem to hold their own, but it is the quieter type of landscape that at present receives less attention and appreciation than, in my opinion, it deserves.

There is no doubt that the photographic beginner, with his small hand camera, is disappointed by the results of his landscape essays. They do not come up to his expectations, and he is discouraged from further efforts.

A good deal of nonsense is talked about the lens "dwarfing" distant objects. It is suggested that if the lens played anything like a decent game it would make a man a mile away as recognisable as if he were only across the road. A high magnification telephoto lens would do much in this direction, but what would become of the surrounding landscape?

Fig. 1. From the Hog's Back, Surrey.

Fig. 2. Corfe Castle from the Swanage road.

In Fig. 2 the town from side to side probably extends for a mile, and it would be interesting to know how we could get this within the compass of a 3-in. negative without "dwarfing" the houses, trees and other objects, to say nothing of the more distant and extensive hills. The view is as it appears to the eye, although the impression is modified by our knowledge of the actual rather than the visual size of things.

These wide panoramas are difficult to render with anything like adequacy by photographic or other graphic means. The skilful painter comes nearest to doing them justice, and many a glorious landscape has he stretched before us, with its light and shade, its wealth of detail, and, above all, its marvellous colour.

From a good vantage point our eye sweeps the horizon from side to side, and ranges from foreground to distant sky-line. We may easily scan an area of two or three hundred square miles. Even if we could include all that on a single negative, what could we expect of such a compression?

But we do not, in practice, include it all. Whichever way we point our lens we are securing only a section of the vast scene. It is a mere fraction, a sample, of what we saw.

The two illustrations are intended to be a suggestion of a method of effecting some slight improvement in our little snapshots. Both are from $3\frac{1}{2} \times 2\frac{1}{2}$ negatives, the whole length being used, but only about one-third of the height. Both foreground and sky have been excluded. One important result is that the long narrow shape causes us to run our eyes backwards and forwards from side to side, which is exactly what we do when viewing the scene.

In both there is some foreground interest—generally very helpful for several reasons. In Fig. 2 is a reminder that we should arrange our subject with the subsequent trimming in mind. Both "Mentor" and "Ricardo," as well as hundreds of observant readers, will let me have it properly in the neck for running that railway line out at the corner.

Sometimes it is well to restrict the foreground still more in favour of an effective sky.

Special cameras, with swinging lens and a long narrow film, have been made for these panoramic effects, and the results are often good, in spite of the inevitable pranks played with the perspective.

There is also the dodge of taking the scene in sections, so that prints from the negatives can be combined to make one long picture. This has its advantages—and its difficulties.

Anyhow, I offer the beginner the suggestion I have made, as a step in the right direction. He will, I hope, make further attempts at this sort of subject with the deliberate intention of using only a strip of the negative. Of course, he must carry out the idea himself, and not entrust it to hirelings. It is a question of studying carefully in each case the best width of the strip to be used, and the exact amount of foreground and sky respectively to be included. There are no hard and fast rules, and each case must be decided on its merits.

W. L. F. W.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Hypo-Alum Toning.

Can I tone quarter-plate prints with hypo-alum, or is it only suitable for enlargements? If it is all right could you give me an idea how to try it? *F. O. (Brixton.)*

The fact that you want to tone only small prints makes it all the easier for you to improvise an arrangement for trying the process—a very good one, by the way.

Make up a good quantity of bath, as it keeps well, can be used repeatedly, and improves with use. Suitable proportions are hypo, 4 oz.; alum, 1 oz.; water, 15 oz. Use the water hot, and take care that the alum is completely dissolved. Put a few pieces of bromide paper—old stock will do—into the solution for a start, or the bath will have a reducing action on prints, and will not work so well.

Get a cheap baking tin, and a porcelain dish rather smaller, but sufficiently large to allow plenty of room for keeping a batch of prints moving in the solution. Put cold water in the tin, and place in it two suitable supports so that when the dish is stood on them it will be just above the surface of the water.

Put the tin of water over a low gas ring, and stand on the supports the dish containing the hypo-alum and the prints to be toned. The water should be kept just short of boiling, and the steam will gradually raise the temperature of the toning bath. From the time this begins to warm up the prints must be kept constantly on the move, and not allowed to lie in heaps. Action is slow at first, but accelerates as the temperature rises.

The longer the action the warmer the tone. A minute or two before the desired tone is reached, turn out the gas, remove the dish of prints, and stand it aside till the bath is cold. The prints must then be very thoroughly washed to remove all traces of hypo from the hardened emulsion.

Return the toning solution to the stock bottle for future use.

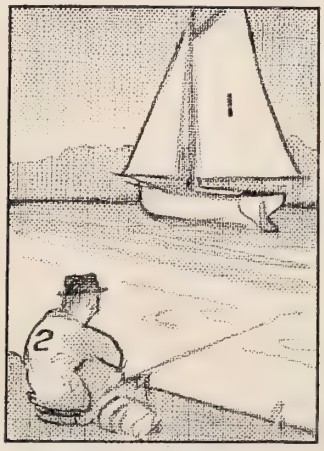
To get good results the prints must be strong and fully developed, or they will turn out weak and sickly after toning. The change of colour generally makes the shadows appear more transparent.

Reducing a Negative.

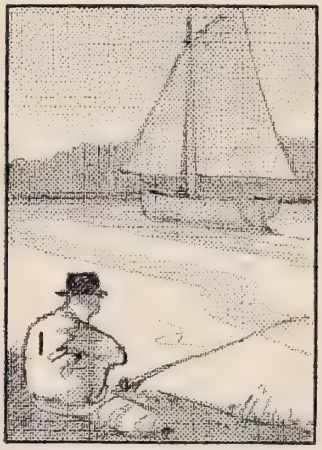
I often get negatives that are plainly over-developed, and this causes trouble in enlarging. Is there a safe and reasonably simple way of improving them? *R. D. (Dublin.)*

Assuming that the negative was exposed with reasonable correctness, it is possible to bring it back to the condition in which it would have been had development not been carried too far.

Into a bottle of suitable size pour 40 oz. of water. Make a little bag of fine muslin and put in it 30 grs. of potassium permanganate. By means of a piece of cotton suspend the bag in the bottle just below the surface of the water, and let it stand till the permanganate has all dissolved and diffused itself through the water.



For use, to each ounce of this stock solution, add 2 oz. of water and $3\frac{1}{2}$ minims of sulphuric acid; e.g., stock solution 4 oz., water 8 oz., acid (say) 15 minims. Lay the negative, previously soaked in water, in a white porcelain dish, pour over enough solution to cover it well, and rock gently. As the white dish will show, the solution soon loses its clear colour, when it should be poured off, and a fresh lot applied.

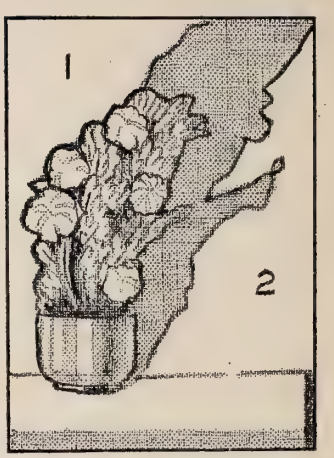


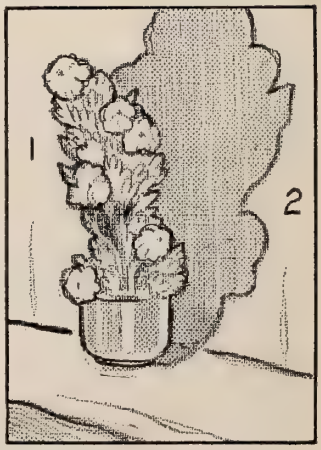
The progress of reduction must be carefully watched, as if the action is too prolonged shadow detail will disappear. Keep on the safe side.

Rinse the negative quickly under the tap and place it for five minutes in a 2 per cent solution of oxalic acid, as a preventive of permanganate stain. Do not wash the negative in the usual way, but give it three or four changes into clean water at intervals of a few minutes. The method is a reliable one, but should be tried first on a negative of no value, so that the action and effect can be studied.

Picture Points

No. 17 (New Series) *by RICARDO*





Overcoming Divided Interest.

WE have already, in this series of "Picture Points," given several examples of divided interest and shown how they can be avoided.

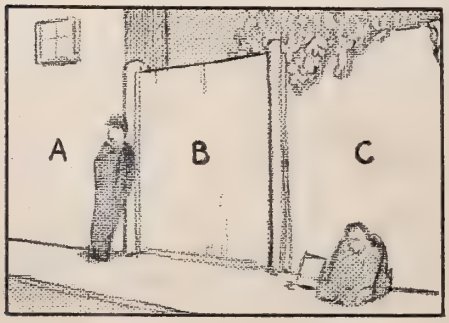
Undoubtedly it is better to look for such faults before making the exposure, but should it be unavoidable, or circumstances are such that the picture must be taken without any hesitation, we can often remedy the fault either on the negative or on the print.

The top illustration shows an example where the attention is divided, i.e., between the boat and the figure, 1 and 2. The next step is to decide which shall be the main point of interest and then set about subduing the other. In this case, the figure is by far the more interesting, and in order to give it the greater prominence, we must tone down the light tones of the boat. This has been effected in the lower sketch, with a decided improvement. It could have been secured on the negative itself, but it would no doubt be easier to do it on the print, either by local extra exposure in the printing, or by handwork after, or by shading down with pigment, water colour or conté powder.

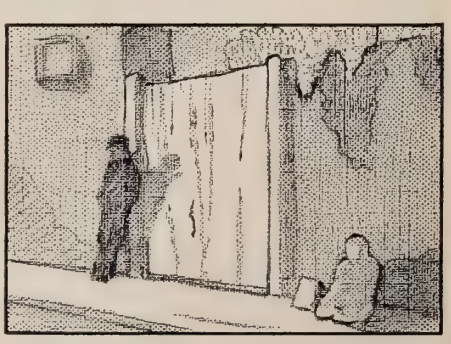
Awkward Contours.

CONTINUING on the point of shadows in all subjects, we must bear in mind that the shadows must be given every consideration when arranging the direction of lighting. It is not enough to secure a good angle of light that would reveal good modelling, concentration of light, shape, etc., if the consequent shadows are in themselves very distracting. By this we mean the contour of the shadows rather than the absence of tone values in the shadow itself. To illustrate this, the sketch at the top has been purposely given an awkwardly shaped shadow on the background, and is further emphasised by a bold outline.

If we compare this with the lower sketch, we can see how a much more pleasing shadow shape can be secured by altering the position of the subject, angle of background, and sometimes the angle of lighting itself. It is not always easy to detect the shape of the shadow, either on the subject itself or on the print, but if the lighter portions of the *background* itself are viewed as shapes, such as 1 and 2, then it is often easier to recognise the bad shape of the shadow.



This hint can be applied to all subjects, whether they contain prominent shadows or not. For example, the contour of a tree silhouetted against a light sky can usually be judged by the contour shape of the *sky* remaining.



No only is an awkward shape ugly to look at, but it always detracts from the main point of interest.

Avoiding Monotony by Varying the Tones.

IN last week's series of "Picture Points" we discussed and illustrated the effect of varying the area wherever the shapes were similar. By this means, we avoided monotony of repetition and secured a more interesting play of shapes. It is not always possible to alter the viewpoint to secure different shapes, however, and the only remedy we can apply in this case is to vary the tones of the different shapes.

Supposing, for instance, we decided that the outside dimensions of a picture, similar to the left-hand sketch, could not be altered in any way, we are left with three shapes, A, B and C, which are, approximately, of the same width. Because of the constant widths, each of the same tone, obviously there is little variety in the subject, and the only way to remedy the monotony is to vary the tones. A much more pleasing arrangement is now possible and an example is given in the right-hand sketch where each of the three areas bears a different tone.

Falsifying of tone values is perfectly safe with all subjects where the colouring is optional. We could not take liberties by varying the tones too much where the subjects are known to be of a certain colouring or colour scheme. Here, however, the tones of the walls can be varied with impunity without being obviously false in tone value.

With some subjects, such as landscapes, however, there is a certain order of varying the tones to avoid bad perspective effects, and this will be discussed later.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

September with the Ciné Camera

By S.E.L.M.

SEPTEMBER is in many respects the finest month of the whole year for active cinematographers. It possesses the greatest variety of outdoor "action" subjects, is neither too hot nor too cold for comfortable working, and provides certain atmospheric conditions which facilitate the attainment of "natural" effects.

A glance at the diary of "Action Subjects" for the month will show the varied nature, but not the entire extent, of these. Most of the events, too, may be filmed as casual episodes; though it is frequently better to treat them as parts of larger and more comprehensive films—"Saturday" (Bolton Amateur C.A.) and "Speculation" (C.S. Ciné S.) being two noteworthy examples of the art of embodying action subjects in the production of greater films.

Quite apart from the particular plan adopted, however, it is important to make the fullest use of all the favourable conditions that present themselves during the month.

Light and Filters.

There will, for example, from the point of view of film sensitivity, be a more even distribution of the "colour" in ordinary daylight—and this must inevitably make for richer images. Hence the filter technique which has served all through the summer will require certain seasonal modifications.

These particularly affect the yellow and amber filters—which (except, of course, in special circumstances) should be used only during the middle hours of the day. Failure to observe this precaution will result in many outrageous effects, and indeed in a sacrifice of good subjects.

Increasing use should, however, be made of the green filters—deep green being especially suitable when the light is full, or when a wide aperture can be employed without risk of losing essential definition. All green filters have the advantage of avoiding those remarkable "inverted" contrasts—which, except in few cases, display not cinematic skill but a lack of it.

Shadows.

Shadows have always played a tremendous part in the dramatisation of simple subjects, and here again September prevails as the ideal month. At early morning, and again in the evening, extremely long shadows are available; whilst even at midday it is easily possible to select angles which will facilitate the showing-up of relief or "modelling" in the subjects taken.

It must not be forgotten here that the sun also will be low at the best hours for working; hence the need for an efficient lens hood—or the camera may be even better operated from within a tent, shed, or other conveniently placed shelter. As in all such work, a set of efficient reflectors is necessary. Without such assistance, the images will be mere silhouettes or worse.

Pictorial Effects.

It will be gathered from the foregoing that the month presents ample opportunity for the filming of many pictorial effects. In this respect, September is a month for the exercise of caution, since its natural beauty has more than once betrayed enthusiastic workers into filming uncinematic "still" studies.

The most effective treatment here is not to introduce extraneous action (which must from first principles detract from the picturesque), but to introduce a filmic quality through studied movements of the camera. In this way, it is possible to show many things that cannot be better displayed through the media of slides and prints.

Most useful of all the camera movements is the steady pan. The full movement should be gone through once or twice before filming, mainly to check up on the tripod stance, but also to disclose minor detractions—such as gaps in the tree-tops and suddenly intruding skies.

Other helpful movements include the axial track and the panoram tracking shots. The latter especially is a most effective cinematic device, and all workers of fair experience are urged to master it. A start can be made with the assistance of any object that moves smoothly and easily (e.g., fair roundabout, gliding boat on smooth lake, car pushed by hand on smooth road, etc.). Remember always that the task will seem much easier—and results much better—with growing experience.

Which is the way of all things in cinematography.

Although there is no "best" month for cloud studies, there are certainly some magnificent formations at this time of the year. Colour filters should, therefore, always be at hand when the ciné camera is in action.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

LEICA FILMS.

SIR,—Methinks your correspondent C. A. Miller will incur the wrath of all self-respecting Press photographers by advocating the marking of focussing scales 1, 2, 4, 8, 10 yards; he thereby robs them of their beloved "3-yarder" and "5-yarder," the most important distances for general purposes.

The purpose of this letter, however, is to advocate the scale of 35-mm film for Leicas in cassettes of twelve exposures; they could be marketed in boxes of three, say pan. 3s. 9d. and ortho. 3s. I rarely take more than six exposures, so that unless I can get back to my base or newspaper I have to send up the full cassette, thereby wasting thirty exposures, apart from the fact that I may have another job for another market; also, think of the popularity of the 1s. film for miniature cameras.—Yours, etc.,

R. J. HOBLYN.

ROYAL PHOTOGRAPHS.

SIR,—When giving precedents for a suggested collection of the King's photographs you have omitted the most important. This is a collection of Queen Alexandra's photographs, entitled "Queen Alexandra's Christmas Gift Book. Photographs from my Camera." The book was published in 1908 by the *Daily Telegraph*, and was sold for charity.—Yours, etc.,

T. A. JONES.

GRAIN AND DEVELOPERS.

SIR,—As a keen minature camera user I cannot help noticing the announcement of one of your advertisers concerning the exposure, etc., necessary when using paraphenylene.

Two of the greatest authorities on miniature camera work, Dr. Paul Wolff and Dr. Sease, offer theories which do not appear to agree with those put forward.

What I believe to be the generally accepted rule is that a developer composed of paraphenylene and sulphite alone yields the finest of all grain, but that with this it is necessary that exposure be increased two or three times with the faster films but not so much with the slow and ultra-fine films.

The addition of glycin to this developer, contrary to the statement made, does *not* result in a finer grain, but has been found to make the grain coarser, at the same time reducing the necessity for over-exposure.

Dr. Sease has produced four formulæ in which paraphenylene and glycin are delicately balanced with gradually increasing parts of the latter, enabling one to meet all requirements as regards grain and to take into account the exposure which has been given.

I cannot help thinking that in view of the authoritative information which is available in, for example, Dr. Paul Wolff's book and the "Leica Manual," some error has crept into your advertiser's announcement.

This letter is written in the hope that it may avoid disappointment on the part of anybody taking pictures on panchromatic films with normal or brief exposures and having them developed in paraphenylene in the belief that they will obtain results comparable with those obtained by Dr. Wolff or similar workers.—Yours, etc.,

P. P. D.

A MINIATURE CAMERA DANGER.

SIR,—I have read with considerable interest C. H. W. K.'s letter on close-ups with the miniature camera, but while I am in entire agreement with him on some points, I feel that as a miniature enthusiast I cannot quite agree that it is the small camera which is to blame for the disproportionate arm of the labourer.

Even allowing that "beer may be best" and also that manual labour results in over-development of certain parts of the human frame, I think that the root of the matter is that the camera was somewhat too close to the subject, and this would be the same whether a miniature or a "normal" type of camera had been used, the only advantage being that the miniature camera would have yielded more depth of focus at a given aperture than an instrument of larger type.

This, if anything, is an advantage in favour of the miniature camera in the sense that it can, if desired, be used very close up to its subject at reasonable lens apertures, whereas the large camera would require stopping down to a ridiculously small aperture to produce the same results, but both instruments will yield identical results from the same distance, and if good perspective is required, whatever the camera, it is necessary to keep back from the subject.—Yours, etc.,

H. N.

SIR,—In a recent issue of *The A.P. and C.* I notice a correspondent falling into a common error, but one which is difficult to understand in these days, in his letter entitled "A Miniature Camera Danger."

He blames the miniature camera for being responsible for so much distorted "close-up" work, on account of the short focus. May I remind him that the size of camera has nothing whatever to do with distortion of images, as this is entirely dependent on the distance from the object that the camera is used at.

So far from the miniature camera having short-focus lenses, they actually have longer focus lenses than the average camera of larger sizes.

Take the 2-in. lens as standard with the Leica. Working on a negative with a longer side of $1\frac{3}{8}$ in. and you will find that this is equal to a 9-in. lens on a half-plate negative, which is much longer focus than that normally supplied with this size of negative.

There is an unwritten law among portrait photographers never to use the camera nearer than six feet from the sitter, which means either using a very long-focus lens or enlarging part of the negative to the required image for big heads.

So please, C. H. W. K., don't prejudice others against the best type of camera there is, when it is the fault of the user through ignorance of the laws of perspective.—Yours, etc.,

H. L. KETTLE.

CAN THE MINIATURE CAMERA LIE ?

SIR,—I marvel at the restraint of C. H. W. K. in expressing in a recent "A.P." his or her objection to H. D. H. Vallis's Baby and "Beer is Best."

Both of these pictures struck me as being positively repulsive—the effect in each instance being pathological, i.e., the dropsical leg and the gorilla-like forearm, with their apparently withered complements. Had I been indiscreet enough to take such snaps the negatives would have been consigned to the waste-box—*tout de suite*.—Yours, etc.,

J. JOHNSTON.

CAMERA SUGGESTIONS.

SIR,—Under the heading "Camera Suggestions" in a recent "A.P.," your correspondent C. G. M. H. discusses an interesting subject.

Has he thought of the possibilities of a second-hand quarter-plate or postcard size film camera ?

These can easily be converted to take either twelve pictures in place of the usual six to a spool; to the popular $3\frac{1}{4} \times 2\frac{1}{4}$ eight spools, or to the panel shape $4\frac{1}{4} \times 2\frac{1}{2}$, and still be available for use with the original size.

A quarter-plate size will have a lens of 5 or $5\frac{1}{2}$ in. focal length.

Suitable supplementary lenses will increase this to 6 or $6\frac{1}{2}$ in. or reduce it to $4\frac{1}{2}$ or 4 in.

Price will range from 10s. upwards. Mine, with an f/6.8 anastigmat and a Compound shutter cost 17s. 6d. A friend obtained a Kodak Special with f/6.3 Zeiss Tessar and Compur shutter, in almost new condition, for 35s.

True, they are larger than the usual $3\frac{1}{4} \times 2\frac{1}{4}$ cameras, but how can extension be obtained without some increase in size ?—Yours, etc.,

F. R. WATTS.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS

Lost.—On Friday, January 30th, a Zeiss Contax Camera, No. U. 54771, was lost in a taxi in the West End. This camera was used to record results of medical research in a London Hospital, and is urgently required again. Previous attempts to trace it have failed. As funds do not exist for its replacement, would the finder please communicate with the Editor.

Photographers who have a need for accurate timing of various periods between half a minute and ten minutes will be interested in the Telometer. This is a small clock with one hand only, and a dial engraved from zero to ten minutes in ½-minute intervals. It is set to any predetermined time by moving the hand to the time period required and this automatically winds up the clockwork and an alarm bell spring at the same time. As soon as one's hand is removed the clockwork is set in motion and immediately the allotted time is up, and the hand reaches zero, the alarm mechanism is released and a warning is given by a small bell with a pleasing but penetrating tone. The alarm will ring when the hand is wound any distance, but for very short times of about ½ minute, the hand is wound on to, say, six minutes, and returned to the required time to give a longer warning. Over a series of various times it was found accurate within a few seconds, so that it could be safely trusted for timing of both very short and longer periods up to ten minutes. It is finished in nickel and enclosed in a small wooden case enamelled dark brown. It measures 5 inches wide and 3 inches high. Price 11s. 6d. post free from Accessories Marketing Co., 45/49, Crown House, 147, Regent Street, London, W.1.

An Evening Class at the Cripplegate Institute, Golden Lane, City, under the direction of Mr. John H. Gear, Hon. F.R.P.S., will commence the Winter Session on the 30th inst., and will continue every Wednesday at 6.30 p.m. This old-established class embraces much of the technique and practice so very essential to all camera users, and it is open to all without restriction. Miniature camera work and subsequent great enlargement for all purposes is a feature.

Will the customer who obtained a $2\frac{1}{4} \times 3\frac{1}{4}$ roll-film camera, f/6.8, please return to Edwin Gorse, 86, Accrington Road, Blackburn, for adjustment of pressure plate, omitted.

Civil Service Portfolios.—Readers who are enthusiastic amateur photographers, whatever their stage of proficiency, are invited to become members of the C. S. Provincial Portfolios. New members can be enrolled forthwith on payment of the 1937 subscription of 3s., which includes a free quarterly copy of the C. S. Photographer during the coming year. There are six regional sections in England, and one each in Scotland and Wales. Portfolios circulate at quarterly intervals, and members are able to send round specimens of their photographic work for criticism, and join in the discussions of other members' pictures. The scheme is an extremely interesting one, and provides a valuable stimulus to the attainment of a higher pictorial and technical standard. Fuller details may be obtained by sending a stamped addressed foolscap envelope to Mr. W. A. Wood, Ministry of Labour (U.I.2.), Montagu House, Whitehall, London, S.W.1.

The winner of last week's competition organised by Wallace Heaton Ltd. is P. S. Milne, München, Türkenstrasse 58, Germany, who has received the award of 21s. Full particulars of this competition will be found in the advertisement pages.

A photographic course is being held at the Borough Polytechnic, Borough Road, London, S.E.1, beginning on Monday, 28th September, 1936. The course, which is both theoretical and practical and includes portraiture, retouching, etc., is open to amateurs of both sexes, as well as those engaged in the trade. Also at The Dalston Literary Institute, County Secondary School, Colvestone Crescent, Dalston, London, E.8, a similar class is conducted by the same teacher, Mr. R. Coombe, open to all photographers. Full particulars are obtainable from the schools mentioned.

Photographic classes are again being held on Tuesdays and Fridays at the Walworth Men's Institute, Beresford Street, Camberwell Gate, S.E.5, under the direction of Mr. W. Alan Wilson. Special attention is given to beginners, and there is a camera club open to students. The opening date is September 29th.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, September 16th.

Borough Polytechnic P.S. Alliance Competition Slides, 1935.
Reading C.C. Visit to R.P.S. Exhibition.
S. Suburban and Catford P.S. Magazine Evening.

Thursday, September 17th.

Camberwell C.C. "Sights of London." A. E. Marden.
Bury P.S. "A Cruise to the Southern Cross." T. Woods.
H.H.P.S. "Unknown Nepal." Major Brook Northey.
Kinning Park Co-op. C.C. Contact Print Competition.
Medway A.P.A. Discussion at Camera Cottage at 7.30 p.m.
N. Middlesex P.S. "Early Efforts in Carbro." R. E. Bennett.
Oldham P.S. Members' Suggestions for Winter Syllabus.
Oldham Equitable P.S. Committee Meeting.
Rochdale P.S. Night Photography. Meet at rooms 7.30 p.m.
Stretford C.C. Studio Evening.

Friday, September 18th.

King's Heath and D.P.S. "Finishing Prints." Donald Allen.
Sheffield P.S. Portrait Group. Demonstration. Mr. Godson.

Saturday, September 19th.

Blackburn and D.C.C. Trip to London. Red Book Day. H. Mullineaux.
Bolton C.C. Worsley and District. J. E. Balshaw.
Borough Polytechnic P.S. Week-end Outing. The President.
Bristol P.S. Tortworth (alight Cromhall "Red Lion").
Cripplegate P.S. St. James's Park. J. C. Holloway.
Dennistoun C.C. Port Dundas. C. Graham.
Hackney P.S. Outing—The Forest. Harold Rose.

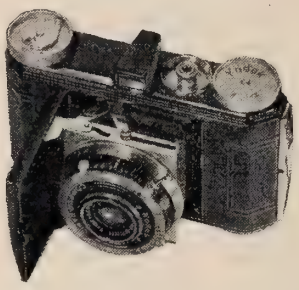
Photography takes on new thrills



with one of these precision-made fast-lens miniature "Kodaks"

SIX-20 DUO "KODAK"

Takes 16 pictures on the usual eight-exposure Kodak Film No. 620. Fast f4.5 and f3.5 lenses in multi-speed shutters, including 1-1/300th "Compur." Optical eye-level viewfinder, springs into position at a touch. Focussing down to 3½ feet. Depth of focus scale. Picture size 2¼ x 1⅝ inches—negatives make reasonably-sized contact prints and big crisp enlargements. - - - - From **£6.0.0**

"RETINA"

Holds film for 36 exposures at a single loading—Kodak 35mm. Film, "Panatomic" or Super Sensitive Panchromatic grades. Very fast f3.5 lens in 1-1/300th "Compur" or 1-1/500th "Compur-Rapid" Shutter. Automatic exposure counter. Automatic film spacer—no overwinding. Optical eye-level viewfinder—all-enclosed spyglass type—gives brilliant clear image. Depth of focus scale. - From **£10.10.0**

KODAK LIMITED, KODAK HOUSE, KINGSWAY, LONDON, W.C.2

—of MATERIAL advantage to photographers

MEZZOTONE abounds with advantages to those in search of artistic and technical qualities. It is unique in having the ability to produce rich warm prints by direct development **COMBINED** with a printing speed approximating to that of a bromide paper. The plates have a similar combination of qualities.

TEMPiPHOT

THE SUPER METER FOR UNIVERSAL USE

AN AMPLIFIER enormously increases the sensitivity, giving dead accurate exposure readings for **Indoor** photography or cine work. So sensitive is the Tempiphot with the amplifier attached, that a reading up to 120 seconds at f/9 with a film of 23° Scheiner can be obtained. **WITH OR WITHOUT AMPLIFIER.**—The meter can be used for ordinary lighting conditions without the amplifier. The amplifier simply plugs in when required. **SIMPLICITY.**—Accurate readings instantly without any calculations whatever. Readings for strong, poor, artificial or interior lighting are all contained on a single scale. **COMPACTNESS.**—The meter slips into the pocket and takes no more room than a packet of ten cigarettes. The amplifier is small enough to go comfortably into a waistcoat or ticket pocket.

TEMPiPHOT COSTS ONLY 75/-

Amplifier 37/6. *Morocco zip-fastener cases for either (if desired), 5/- each.*

Exhibitions and Competitions

CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, September 30. Rules in issue of August 26.

The Amateur Photographer Novices' Competition. Prizes of Roll Films for Novices' Prints. Closing date, September 30. Rules in this issue.

The Amateur Photographer Special Competition, illustrating "Can the Camera Lie?" Entries close September 30.

Wallace Heaton "35-mm. Film Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

XVme Salon International de Photographie de Bruxelles.—Open, May–October. (M. Maurice Broquet, Secretaire du Salon, Rue du Sceptre, 77, Brussels.)

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

The Folkestone Camera Club, Competition for the best photographs of Folkestone.—Entries close, September 30. Cash prizes. (Ernst. F. Davidson, Hon. Secretary, Folkestone Camera Club, Town Hall, Folkestone.)

Chicago International Salon.—Open, July 23–October 4. (Alex. J. Krupy, Chicago C.C., 137, North Wabash Avenue, Chicago, Ill.)

XXXIe Salon International D'Arte Photographique de Paris.—Open, October 3–18. (M. E. Cousin, Secretaire de la Société Française de Photographique, 51, Rue de Clichy, Paris (9E).)

Tweede "Focus" Fotosalon.—Open, September 12–27. (Focus, Ltd., Fotosalon, Bloemendaal, The Netherlands.)

South African International Salon.—Open, October. (Hon. Secretary, Johannesburg P.S., P.O. Box 7024, Johannesburg, South Africa.)

Royal Photographic Society Annual Exhibition.—Open, September 12–October 10. (Secretary, R.P.S., 35, Russell Square, London, W.C.)

Buffalo C.C. Fourteenth Annual Salon of Photography.—Open, September 6–27. (H. W. Schonewolf, 528, Elmwood Avenue, Buffalo, N.Y., U.S.A.)

Morecambe, Heysham and D.P.S.—Open, September 9–16. (James F. Levisohn, B.Sc., 5, Douglas Drive, Heysham, Lancs.)

Fotoclub Zagreb, Fourth International Salon of Photography.—Open, October. (Fotoclub Zagreb, Masarykova II, Zagreb, Yugoslavia.)

London Salon of Photography.—Open, September 12–October 10. (Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.)

Lincoln Camera Club.—Open, October 15–November 12. (Miss E. Redfern, 146, Burton Road, Lincoln.)

XII Salon International de Fotografica, Zaragoza, Spain.—Open, October. (Secretary, Sociedad Fotografica de Zaragoza, Plaza de Sas, 7, Zaragoza, Spain.)

Third Canadian International Salon of Photographic Art.—Open, October 23–November 15. (Exhibition Secretary, Canadian International Salon of Photographic Art, National Gallery of Canada, Ottawa, Canada.)

Windlesham C.C.—Open, September 25–26. Classes for members (Beginners, Advanced, Professional, also Open Class). (J. C. Hayward, Hallgrove, Bagshot, Surrey.)

IV International Hungarian Exhibition.—Open, October 24–November 9. (Secretary, Magyar Amatőrfényképezők, Orsz. Szövetsége, Budapest VII, Erzsébet-körut, 9, Hungary.)

Rotherham P.S. Forty-seventh Annual International Exhibition.—Entries, September 21; open, October 14–17. (E. George Alderman, Ruardean, Newton Street, Rotherham.)

Service Co. (London), Ltd., Happy Camp Snaps Competition. Cash prizes.—Entries, September 30. (Service Co. (London), Ltd., 273, High Holborn, London, W.C.1.)

Coronet Midget Camera Competition. Cash prizes.—Entries, September 30. (Coronet Camera Co., 310, Summer Lane, Birmingham, 19.)

Eighth International Photographic Salon of Japan.—Entries close in Tokyo, September 30; open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo, Asahi Shimbun, Tokyo, Japan.)

Photographic Society of America 100 Print Salon.—Entries, October 1. Limit 4 prints. Entry fee $1.00. (Dever Timmons, Salon Secretary, Box 216, Cashocton, Ohio.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Entries, October 1; open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

G.E.C. (Coventry) Third Annual Exhibition. Open classes for members of Midland Federation Clubs.—Entries, October 14; open, November 9–14. (P. H. Crosby, Hon. Sec., G.E.C. Photographic Society, General Electric Co., Ltd., Coventry.)

Johnson's "Holiday" Competition. Cash prizes.—Closing date, October 31. (Johnson & Sons, Ltd., Hendon, N.W.4.)

U.P. International Exhibition of Photography, 1936. (Lucknow).—Entries, November 1; open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.) Entry forms obtainable also from the Editor of *The Amateur Photographer*.

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Entries, November 15; open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr, 69, Antwerp.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

33.

INTENSIFIERS

2.—Mercuric Chloride.

Mercuric chloride	144 grs.	27.5 grm.
Water	12 oz.	1,000 c.c.

The mercuric chloride should be dissolved in very hot water and the solution allowed to cool before use. It can be used repeatedly and will keep indefinitely. The negative, which can be treated immediately after fixing and washing, or after a fifteen minutes' soak if it has been already dried, is placed in the mercuric chloride solution and rocked until the image is thoroughly bleached. This will best be seen by examining the plate from the back. After bleaching, wash for a few minutes and immerse in the following bath for a minute, rinsed and followed by another similar immersion and washed for three minutes.

Hydrochloric acid	30 min.	10 c.c.
Water	12 oz.	1,000 c.c.

The image, which should be of a very light cream colour, is now ready for blackening in either of the following solutions:—

1.—Any non-staining alkaline developer such as M.Q., Amidol, etc. This gives sufficient intensification for most work, but for greater contrast the negative may be bleached and redeveloped several times until the desired contrast is obtained.

2.—Sodium sulphite, 10 per cent solution. Only a slight intensification is gained with this solution. If the contrast is insufficient, the negative may be rebleached and redeveloped as in (1).

The mercuric chloride solution should be kept in a poison bottle and marked accordingly.

34. TESTS FOR HYPO

TO ascertain whether the hypo has been completely eliminated from the emulsion of either negative or print, the following permanganate test is quite reliable for normal purposes. Dissolve 10 grains of potassium permanganate in 10 oz. of distilled water and keep this as a stock solution.

For use, take a little of this stock solution and dilute it with plain water until it shows but a faint pink colour. Take the negative or print direct from the washing bath and allow a few drops of the water from one corner to drip into the diluted permanganate solution. If the pink colour changes to a greenish tint, there is still some hypo in the emulsion and washing must be continued until no discoloration takes place.

Another reliable test, the classic method for this purpose, can be carried out as follows.

Powder a little domestic starch and boil it up gently in enough distilled water to make a thin but slightly viscous solution. (It is important that distilled water only be used.) Dissolve a few flakes of metallic iodine in alcohol, and add a drop or two to the starch solution after it has become cool. The starch at once assumes a deep blue colour. To a few ounces of the wash water add a drop or so of the iodine-starch solution, and if hypo is present the blue colour will at once disappear.

In some districts the water supply contains a certain proportion of impurities that would be sufficient to change the colour of the hypo tester without the addition of hypo, so it is advised to make first a test of the direct water supply by allowing a little of it to drip into the diluted testing solution. If no discoloration can be seen after a few minutes then the hypo tester can be used with confidence.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Drying Negatives.

Does the methylated spirit bath have any bad after-effect on the negative? A. T. T. (London.)

If the commercial methylated spirit is used, sometimes a light scum is formed on the emulsion, which veils over the portions affected and consequently causes lighter patches on the print. The methylated spirit drying bath should only be used for plates as it causes celluloid to cockle.

Telephoto Lens.

Is it possible to use a telephoto lens with a Rolleiflex camera? If so, how does one compensate for the difference between the finder lens and the telephoto? G. L. (East Ham.)

The camera to which you refer is of the twin-lens type, the two lenses being most accurately paired. It is obvious that in such a case the whole apparatus would be thrown out of gear by the slightest alteration in either of the lenses fitted.

Copyright.

If I take photographs to someone else's order, can I sell the reproduction rights to a paper without infringing their rights? W. G. (Ilford.)

If you take the photographs to the order of someone else, the copyright is his and not yours. If you take them on your own initiative, and subsequently sell some prints, you can do what you like with any others which you may possess; the copyright in that case rests with you.

Failure in Glazing.

Could you account for the greasy surface of the enclosed prints? I have scalded my glossing tins and put beeswax and benzine on them, and also changed my developer and hypo.
C. S. (Northampton.)

If you are not careful you will ruin your glazing slabs by the scalding and other treatment to which you are submitting them. The only trouble with your prints is that you are not squeegeeing them down so as to exclude all air. You should lay the prints face down on the slabs with plenty of water between the two surfaces, and then use a roller squeegee to expel it all.

Focal-plane Shutter.

What is a focal-plane shutter, and to what does its name apply? A. G. (Hampstead.)

The focal plane is that on which an image is brought to its sharpest focus by a lens. The focal-plane shutter is one that works as near to this plane as possible. Its general form is a blind of opaque material with a slit, generally variable in width, passing across it from side to side. The blind works on two rollers actuated by springs and as it passes from one roller to the other the slit travels down close to the plate or film and so makes the exposure.

Stripping Film from Celluloid Negative.

Is it possible to strip the film from a roll-film negative and transfer it to glass to make a glass negative? W. T. (Watford.)

Yes; it is quite possible to do this, but considerable care should be exercised as the film is very thin and delicate. Soak the film negative in the following solution: Caustic soda, 10 grs.; formalin, 10 mins.; water, 1 oz. In a short time after immersion in this solution the film will show signs of detachment from the celluloid and can then be rolled back very gently with the finger-tip until it is completely detached. It is then carefully lifted and placed in hydrochloric acid, 25 mins.; glycerine, 25 mins.; water, 1 oz. In this solution the piece of glass to form the final support is slipped under the detached film which is carefully adjusted on its surface. It is then lifted in contact with the glass and placed in plain water for a minute or two, and finally lifted out in contact with the glass, taking care there are no air-bubbles formed between the film and the support, and allowed to dry naturally. When quite dry and hard the glass negative can be washed or treated in any other way necessary as with an ordinary glass negative.

Filtering.

How do you filter solutions? G. B. (Acton.)

You should get at your dealer's, or through a chemist, a glass funnel and some filter papers. The papers are like white blotting-paper, and the dealer will show you how to fold them into a cone which fits the funnel. The solution is poured into the funnel, and it passes by degrees through the paper and into the vessel in which the funnel is placed. Sometimes it is equally effective to put a plug of wet cotton-wool into the funnel so that it covers the outlet.

Window Reflections.

How can I avoid reflections of trees and sky when photographing a shop window?
I. H. (Streatham.)

If when you look at a shop window from the position of the lens you see reflections in it there is no possible means by which you can avoid their coming out in the photograph. A plate-glass window with a more or less dark interior behind it naturally acts as a mirror. The only chance of avoiding this sort of thing is to take the photograph at night by artificial lighting, or else by employing the "Pola-screen" system which was described in this journal of July 15th, 1936.

Night Photography.

I am thinking of experimenting with night photography. Can you give me any suggestions as to the best negative material to use and suitable exposures to give for this class of work?
D. S. (Wanstead.)

The choice of negative material depends largely on the type of night photography you wish to do. If it is intended to make instantaneous photographs, undoubtedly the fastest emulsion is the super panchromatic variety, but for slow exposures consisting from a few seconds to minutes it is not so important to choose the panchromatic material, and the fast ortho emulsions will serve quite well. It is strongly advisable to have the plates or films well backed in order to prevent halation that is so marked when including street lamps, signs, etc. It is just as impossible for us to suggest accurate exposures for night photographs as it is for daylight work. The best way is to make a few test exposures, noting the type of subject included and lighting, as well as the stop used. By this means, you can make a few notes of your experience and these will be the best guide to future work. If in doubt, always give double the exposure you intended to, and develop the negatives for about three-quarters of the normal time. This is to soften the harsh contrast that is so evident in night photography subjects when lights are included. A good lens hood is also a valuable accessory for night work.

A Prize Competition for Novices

THIS competition is specially for those readers of "The A.P." who are Novices; that is to say, amateur photographers who have never won an award of any description in a photographic competition, and preferably those who are only just starting photography.

The prizes will be awarded for the best snapshots of subjects that the beginner usually attempts. These include snapshots of the family, groups, or single figures taken at home or on holiday, either indoors or outdoors, and landscape and beach scenes, etc., with figures. The arrangement of the subject and the pose of the figure or groups is a matter left entirely to the discretion of the competitor.

The entries will be restricted to contact prints. These may be mounted if preferred, and the smallness of any print will not affect its careful consideration in this competition. The rules are very simple, but should be read carefully.

Our readers who are Novices still have time in which to make their prints for this competition, and the prizes are worth having.

THE PRIZES.

The prizes in this competition will consist of supplies of roll film or plates (for those winners who happen to use a plate camera), as follows:—

The First Prize will be TWO ROLL FILMS EVERY WEEK FOR ONE YEAR.
The Second Prize will be TWO ROLL FILMS EVERY WEEK FOR SIX MONTHS.
The Third Prize will be ONE ROLL FILM EVERY WEEK FOR SIX MONTHS.
Twelve Prizes of ONE ROLL FILM EVERY WEEK FOR THREE MONTHS.

The winners of these prizes will thus be encouraged to continue their photographic activities throughout the year with a supply of free film.

RULES.

Each print must have affixed firmly to the back a coupon which will be found in our advertisement pages each week. This must contain title of print, and name and address of competitor.

The latest date for receiving entries is September 30th.

The decision of the Editor in all matters relating to this competition must be accepted as final.

All entries must be addressed as follows: The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the outside of the envelope or package must be clearly marked "Novices" Competition.

CAN THE CAMERA LIE?—A New Competition

IN the Summer Number of *The Amateur Photographer*, published on July 22nd, a new competition was announced in connection with articles that appeared in that issue dealing with "pictorial inexactitudes." It was demonstrated that by judicious application of the camera, combined with unusual viewpoints, or by double exposures, results were obtained that on their face value appeared to be unreliable.

In this competition prizes are offered for the best photographic "untruth," but the prints must be quite straight and from untouched negatives. Combination prints, or prints that have been built up by cutting out other photographs and copying, or prints that have been obtained by various "control" methods, are not eligible for this competition.

The prizes are **5 guineas, 3 guineas, 2 guineas, 1 guinea** and **10s. 6d.** They will be awarded for what are considered to be the best efforts in making the camera "untruthful." The negatives of the winning prints and of any others must be submitted for inspection if required. Technical data should also be given regarding the production of the photographs.

There are no other conditions beyond those mentioned above. A special competition coupon, which appears each week in the advertisement pages, must be affixed to the back of each print. The closing date will be September 30th.

Entries should be addressed to the Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and should be marked on the envelope, "Special Competition."

PHOTO-GUIDE HANDBOOKS

Here are the first of the *new* PHOTO-GUIDES—four little books crammed from cover to cover with the information you know you need. Between them they answer every question that has ever perplexed you and put you on the road to real success.

1. **"A GOOD PICTURE EVERY TIME"** explains the rules that govern pictorial composition, tells you how to make every snap an "exhibition" picture.

2. **"SHARP FOCUS/ACCURATE EXPOSURE"** gives you easily understood and *easily remembered* rules for deciding the correct setting of distance scale, lens aperture and shutter time.

3. **"130 PHOTO-FAULTS"** covers every stage of photography from camera-loading to enlarging, giving the cause and cure for every fault that's ever worried you—or ever likely to.

4. **"TAKING PICTURES AT NIGHT"** will convince you that your camera is capable of incredible achievements, will show you how perfect night pictures can be secured with even the smallest, simplest camera.

Price 1s. 1d. each, or post free 1s. 3d.

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

ABOUT PROCESSING

We take great pride and care in all classes of DEVELOPING, PRINTING and ENLARGING, as well as special photographic work which is either too difficult or too much bother for other folks to do.

If you require anything out of the ordinary in the way of that maligned term "photo finishing," just let us know and we will quote by return giving fullest information.

We do NOT advocate a rush service as it is not possible to achieve the best possible results, but prefer to take our own time and do the job properly WITHOUT EXTRA CHARGE to the usual standard prices.

Extensive alterations to our plant and new equipment recently installed for high-class work by fully-trained staff.

MINIATURE PROCESSING

of all types of film emulsions (including Dufay-Leica colour films), using the finest chemicals and most suitable formula. Contact printing on continuous perforated paper. Positive film printing for projection. Contact or enlarged Lantern Slides in black-and-white or tinted finish. Enlargements from 3½ × 2½ to 22 × 16 in.

GENERAL PHOTOGRAPHIC WORK.

Copying and Reproduction Negatives by contact, reduction or enlargement. Lantern Slides from large or small negatives or prints.

Black-and-white or Toned Enlargements of all sizes supplied on any grade of Kodak or Agfa papers of customer's own choice—again without extra charge.

Originals, Negatives, Prints, Legal Documents, Drawings, Maps, etc., and all classes of private photographic work treated with absolute confidence and despatched by registered post.

Prints or Enlargements dry-mounted on mounts or in customer's own albums, and titled if desired. LARGE SELECTION of loose-leaf and bound ALBUMS at popular prices from pence to pounds.

● ● ●

Any make of camera from 5/- to £50 supplied right away for Cash, Exchange, or on Hire Purchase Terms financed entirely by this old and widely respected company.

The NEW
"SUPRAMIN"
Finest of Fine-grain Developer.
The ONLY Non-poisonous, Non-staining Paraphenylene Diamine Developer.
NEW FEATURES—only obtainable from
"SUPRAMIN"

- Compensates for variations in exposures and produces uniform gradation.
- Can be used repeatedly. One 36-oz. carton will develop 4 to 6 Leica films.
- Requires no increase of exposure.
- Keeps perfectly in solution.
- Gives still finer grain.
- Negatives can be intensified and retain finest grain.

COMPLETE Development Chart. No increase of price.
To make 72 oz. ... **4/-** Smaller size to make 36 oz... **2/4**
Obtainable from all dealers, or direct from :

Leica Cameras Wanted

FOR SPOT CASH

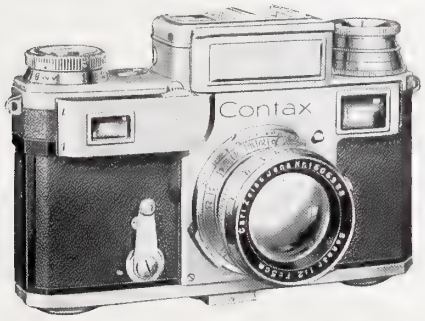
Super Ikonta Cameras wanted for spot cash.

Recent 16-mm. Projectors wanted for spot cash.

Let us make you an offer.

OUR KNOWLEDGE OF THE MINIATURE CAMERA IS AT YOUR DISPOSAL . . .

Success as a "miniaturist" depends greatly on the dealer you choose. He must be, not just a salesman, but a specialist who knows all the points about every miniature camera, not merely theoretically, but from actual experiment—the uses of the endless range of accessories—and the circumstances under which it is necessary to use a change of optical equipment—he should be prepared to help you in every way. There are many occasions when you look to your dealer to answer queries regarding various points. We know the cameras we sell because we use them—we have been using the Leica, for instance, ever since its first introduction to the country; the knowledge thus gained is at your disposal—free! We also offer many other free facilities to all who register their cameras with us. Let us write and tell you about them.



A NEW DEVELOPING SERVICE WHICH IS BOUND TO BE OF GREAT INTEREST TO YOU

Our "MICROLUX" Service of developing in Paraphenylene-Diamine and other agents ensures the best results from your film; results which have so minute a grain size that they will enlarge twenty diameters or more without the grain becoming apparent, but owing to the nature of this development it is **essential** that films for "MICROLUX" development receive at least **twice the normal exposure.** Providing this extra exposure is given, negatives developed by our "MICROLUX" process possess a quality that cannot be equalled by ordinary methods, but to submit a film which has received merely the bare minimum exposure to this form of development will not yield good results. The latter we can also develop under the same "INDIVIDUAL" conditions, but in this case the results are not of such microscopic grain size. We offer this service, confident in the belief that it will meet the requirements of those careful workers who would always do their own processing had they the convenience.

"MICROLUX" and "INDIVIDUAL" Development Prices:
Leica, Contax and similar films: For 36 exposures, **4s. 6d.**; per 12 or 18 exposures, **3s. 6d.**
All other 6, 8, 12 or 16 exposure films (up to 3¼ × 2¼ size): Per film, **3s. 6d.**

Note.—When sending films for this special treatment it is more than usually necessary to advise us as to the make and type of film used.

EVERY GOOD MINIATURE IN STOCK

You can always depend on seeing any new apparatus at Bond Street before anywhere else. We study our customers from this point of view, knowing full well that it will be to their advantage and interest to know of each stride that is made in the advancement of miniature apparatus.

As advertisements on these covers go to press a fortnight in advance some of these second-hand items may be sold already, but similar outfits are usually available.

THE LEICA TAKES AN IMPORTANT PLACE IN OUR SCHEME OF THINGS

We have specialised in the Leica for over ten years. We have over 500 Leica accessories actually in stock, and every Leica camera from £26 10s. (or 61s. 10d. down).
We make Automax (Regd.) 3¼ × 2¼ prints from your Leica negatives at 2s. per dozen.
Leica users are supplied free with D. and P. envelopes, Leica exposure record cards, and periodical aids and advice.
Users of Leica or any other miniature camera which cost £10 or more (no matter where it was bought) can have it insured free of charge at Bond Street—write for details. Demonstrations of any miniature apparatus and absolutely unbiased advice on your choice of instrument, given free.

Latest miniature books, new fine-grain and compensating developers all in stock. Generous exchange allowances, and anything on easy terms. Eight different free lists sent for 2d. postage.

By Appointment.

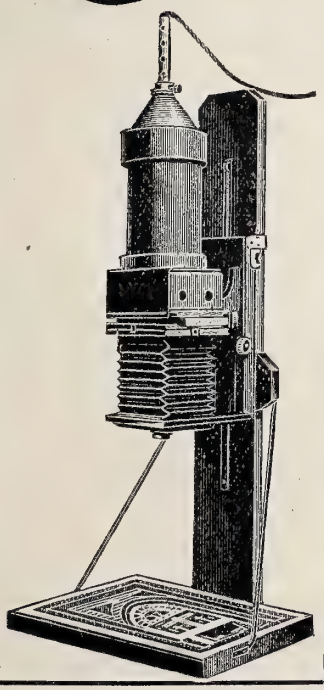
Take **Super** *pictures*

this Autumn on

Kodak **Super** Sensitive Panchromatic Film



OUTDOORS, the light is a little softer, yellower, these days. Now's the time when Kodak Super Sensitive Panchromatic Film comes to the rescue. Its extra speed and high sensitivity to yellows and reds enables you to get fully-exposed pictures all through the year.

Indoors, the Kodak Night Photography Aids—"Photoflood" Lamps and "Kodaflector" Reflectors—give plenty of light for photography with any camera. Here again you need Kodak Super Sensitive Panchromatic Film. It works splendidly with these lighting aids because it is so highly sensitive to artificial light.

Indoors or out, at this time of year, use Kodak Super Sensitive Panchromatic Film for SUPER pictures. Your Kodak Dealer has it in Roll Films, Film Packs, and in 35 mm. form for "miniature" cameras.

THORNTON-PICKARD

ALTRINCHAM, 7, ENGLAND.

YOUR LAST CHANCE . .

TO WIN A BIG CASH PRIZE IN OUR 35-mm. STILL CAMERA COMPETITION

Open to users of cameras taking 35-mm. film as their negative medium.

The Competition is open until September 30th. Your photographs can be of any subject—but they must be taken on 35-mm. film. Prints should not be smaller than 6×4.

Any number of prints can be sent in in any one week, but each photograph must have the coupon attached. In addition to the big prize

A WEEKLY PRIZE OF £1-1-0

will be awarded for the best photograph submitted in that week.

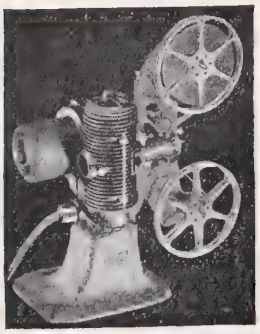
Each photograph must have on the back a coupon as below, and the name and address of the sender, the make of camera and material used.

For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s. ; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of prize-winning prints must be made over to us without further payment.

In addition we are offering a special prize of £1 1s. per month for the best photograph submitted depicting a person or persons using a camera purchased from Wallace Heaton Ltd.

All prints will be judged at the end of the Competition for the final prize of £25 cash. Acceptance of these rules and conditions is a specific condition of entry.

★ This snap won a cash prize in a recent Wallace Heaton competition. Why not have a shot and see what *you* can do?



COUPON which must be attached to your entry.
WALLACE HEATON
35-mm. Film Competition.
September 23rd, 1936.

£25 CASH PRIZE will be awarded for the best picture submitted during the run of the Competition.

Brilliant photographs ALWAYS

BRITISH MADE

Price 63/-

FOR STILL OR CINE CAMERAS

Real morocco ever-ready case . . 5/-

Obtainable at all good photographic stores.

It's so easy to make certain of getting brilliant, sparkling photographs, no matter what the light. The " AVO " Exposure Meter tells you the correct stop and shutter speed for perfect results. It measures the strength of light accurately and gives instant, direct readings. No calculations. It is the most sensitive meter ever made—this makes it accurate even in dim interiors. And it will retain its accuracy permanently.

For winter photography, especially, you need this better exposure meter.

7 POINTS

Definitely the most sensitive exposure meter on the market.

Unique method of exposure indication—simple, easily read.

Unequalled range : covers exposures from 60 secs. down to 1/2,000 of a sec.

Influenced solely by light received from normal picture angle.

Extremely compact. Size only $2\frac{1}{2} \times 2\frac{1}{8} \times 1$ in.

Can be held and operated in one hand. Direct readings.

Robustly made for lasting accuracy.

PLENTY OF OPPORTUNITIES YET!

● The great possibilities of Autumn and Winter Photography are realised by only a comparative few. Faster and more versatile plates and films, however, now make it easy to obtain good pictures, even when the light is dull and difficult—and that with the same camera that you have been using throughout the summer. Or, you may wish to exchange it for one of more modern design and wider scope. ● ● Let "Westminster" service and facilities in EXCHANGING and OUT-OF-INCOME settlement help you to do this.

'FILMAREX' Vertical Enlarger de Luxe

F/4.5 anastigmat, one hand lever rise and fall, with automatic locking, in three models for negatives up to 4×4 cm., 6×6 cm. and 3½×2½.

WITH ONE ACCORD . .

Rolleicord

for AUTUMN PICTURES

Seasons change, light varies, weather conditions run riot, but you can depend on Rolleicord for perfect results *always*. It is easily the best of the popular priced twin-lens reflexes, and shows your picture full size and right way up on the ground-glass screen. Full parallax compensation avoids any part of the picture being "chopped off." Has large finder lens and one-lever Compur Shutter for setting and releasing, speeded to 1/300th sec., T. and B. Takes 12 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ 8-exp. roll film for 1/-, or can be adapted for plates or 35-mm. film, and will take all Rolleiflex accessories excepting only the angle mirror. Both models of Rolleicord II are leather covered. The unanimous choice for Autumn.

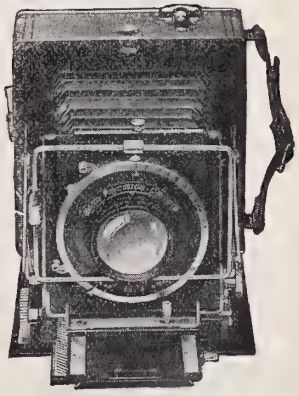
Two Famous
SOHO CAMERAS

THE SOHO REFLEX



The SOHO REFLEX—Acknowledged by experts to be the best camera in the world, the Soho Reflex may be relied upon for the finest possible work under the most exacting conditions. In addition to its many other uses, the Soho Reflex is invaluable in the studio for children's portraiture and similar work where quick focussing of a difficult subject is essential.

The SOHO PRECISION speaks for itself—Read this extract from a letter recently addressed to the London Camera Exchange Co., Ltd., by an advanced amateur photographer :—

" You may remember you recently supplied a Soho ' Precision ' Camera to me. This is worth its weight in platinum, and is producing as good results as I formerly obtained with a half-plate triple extension camera."

We could ask for no better confirmation of our claim that the SOHO PRECISION possesses all the advantages of a FIELD CAMERA and is, in addition, as MOBILE AS A POCKET CAMERA.

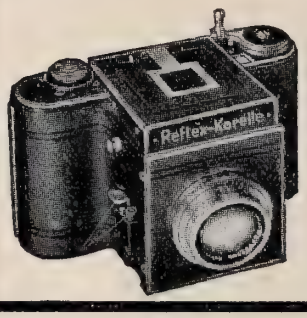
Part-Exchange of
Miniature Cameras



If you are considering the purchase of a camera such as the Contax, Nettax, Leica, Rolleiflex, Exakta, or Super Ikonta, etc., and wish to offer your present miniature camera in part-exchange, we suggest your getting in touch with us.

As miniature camera specialists (we are the only firm dealing exclusively in miniature cameras and accessories), our turnover is quicker and we can consequently afford to give higher than the usual part-exchange allowances. At the moment we urgently require second-hand Leicas (particularly Models III and IIIA), and are prepared to give a little higher than even our usually high allowances in respect of these.

Please mention this advertisement when replying.

A Prize Competition for Novices

Closing date, September 30th.

THIS competition is specially for those readers of "The A.P." who are Novices; that is to say, amateur photographers who have never won an award of any description in a photographic competition, and preferably those who are only just starting photography.

The prizes will be awarded for the best snapshots of subjects that the beginner usually attempts. These include snapshots of the family, groups, or single figures taken at home or on holiday, either indoors or outdoors, and landscape and beach scenes, etc., with figures. The arrangement of the subject and the pose of the figure or groups is a matter left entirely to the discretion of the competitor.

The entries will be restricted to contact prints. These may be mounted if preferred, and the smallness of any print will not affect its careful consideration in this competition. The rules are very simple, but should be read carefully.

Our readers who are Novices still have time in which to make their prints for this competition, and the prizes are worth having.

THE PRIZES.

The prizes in this competition will consist of supplies of roll film or plates (for those winners who happen to use a plate camera), as follows:—

The First Prize will be TWO ROLL FILMS EVERY WEEK FOR ONE YEAR.
The Second Prize will be TWO ROLL FILMS EVERY WEEK FOR SIX MONTHS.
The Third Prize will be ONE ROLL FILM EVERY WEEK FOR SIX MONTHS.
Twelve Prizes of ONE ROLL FILM EVERY WEEK FOR THREE MONTHS.

The winners of these prizes will thus be encouraged to continue their photographic activities throughout the year with a supply of free film.

RULES.

Each print must have affixed firmly to the back a coupon which will be found in our advertisement pages each week. This must contain title of print, and name and address of competitor.

The latest date for receiving entries is September 30th.

The decision of the Editor in all matters relating to this competition must be accepted as final.

All entries must be addressed as follows: The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the outside of the envelope or package must be clearly marked "Novices" Competition.

CAN THE CAMERA LIE?—A New Competition

Closing date, September 30th.

IN the Summer Number of *The Amateur Photographer*, published on July 22nd, a new competition was announced in connection with articles that appeared in that issue dealing with "pictorial inexactitudes." It was demonstrated that by judicious application of the camera, combined with unusual viewpoints, or by double exposures, results were obtained that on their face value appeared to be unreliable.

In this competition prizes are offered for the best photographic "untruth," but the prints must be quite straight and from untouched negatives. Combination prints, or prints that have been built up by cutting out other photographs and copying, or prints that have been obtained by various "control" methods, are not eligible for this competition.

The prizes are **5 guineas, 3 guineas, 2 guineas, 1 guinea** and **10s. 6d.** They will be awarded for what are considered to be the best efforts in making the camera "untruthful." The negatives of the winning prints and of any others must be submitted for inspection if required. Technical data should also be given regarding the production of the photographs.

There are no other conditions beyond those mentioned above. A special competition coupon, which appears each week in the advertisement pages, must be affixed to the back of each print. The closing date will be September 30th.

Entries should be addressed to the Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and should be marked on the envelope, "Special Competition."

Now for some PRINTS from the HOLIDAY SNAPS!

This anent LEICA—and the WESTMINSTER

● With just one and the same LEICA Camera you can do an infinite variety of work—covering virtually the whole range of photography. That, in itself, makes for much saving of time, trouble, space, labour in carrying, and cash. Thus, for the price of your LEICA you are gaining many advantages — advantages especially typical of LEICA.

● ● By a call at "the Westminster" you can learn with pleasure all that there is to know about LEICA. At the same time you can know how (readily and economically) you can Part-Exchange your present Camera for a LEICA, settling any balance Out-of-Income—or, of course, you can buy outright on that basis.

● ● ●

This is the LEICA Model IIIa, having shutter speeds up to 1/1,000th of a second, f/2 Summar lens, and, of course, completely automatic focussing. It costs £43, or can be acquired by 9 monthly payments of £5 0 4. There are other models from £16.

Miniature Camera Users!

Enlargements like contact prints

The new Selo films for users of Leica, Contax and similar miniature cameras, set a new standard for fineness of grain.

They yield enlargements notable for clear detail and a sharpness which is almost indistinguishable from contact prints.

SELO H.P. FILM

Fine Grain Hypersensitive Panchromatic

As fast as a fine grain film can be and remarkable for its fineness of grain. It enables difficult subjects with fast movement to be photographed with the certainty that well-exposed negatives capable of enlargement to great size will be obtained.

SELO F.P. FILM

Extra Fine Grain Panchromatic

Definitely the finest grain film produced and intended for the serious and exacting miniature camera photographer who wants perfect negatives of first rate enlarging quality.

These Selo Films are contained in a special Daylight Cassette of patented design which gives greater safety in handling, prevents scratching, and obviates friction.

SELOCHROME FILM

Special Fine Grain Orthochromatic

A splendid all-round film for almost every type of miniature photography by daylight. Anti-halo backed. For the photographer who wants a film of really fine grain at a low price.

TOPICS of the WEEK

Autumn Photographic Work.

WHILE it is inevitable that a certain number of summer-time amateur photographers discard their cameras as autumn begins, it is a fact that many thousands more than ever before take a renewed interest in their hobby as the dull days and dark evenings approach. New subjects present themselves for treatment that could not be attempted in the past. Modern cameras and materials are responsible for this change of attitude. With the large-aperture "miniatures" and films of amazing speed and panchromatic quality snapshots out of doors are now possible throughout the autumn and winter months, and indoor photography has become equally easy. Above all, the size of the majority of negatives to-day demands the use of an enlarger, and enlarging is essentially a job for the evenings at home. In this, the Autumn Number of "The A.P.," the subject of enlarging and other topical phases of autumn work for the amateur are dealt with, but we feel that it needs no argument on our part to suggest to our readers that their interest in photography should not be allowed to wane now that the holiday season is over and the close of "summer time" is very near.

Travel Lectures.

With the advent of the lecture season a word may not be out of place to those who have come back with a set of slides of pictures obtained on their summer travels and propose to construct a lantern lecture. The first thing a travel lecturer should remember is that scenes which were interesting to him simply because he was there may not be so interesting to his audience, who only see them and hear about them at second-hand. Nothing can be more dreary than a travel lecture unrelieved by human interest. Let the lecturer season his narrative, and his pictures also, with occasional trivialities, concessions to human weakness. Let him tell his audience of an amusing argument at the Customs, or an exceptional meal, or an encounter with an odd individual. Particulars of shopping in foreign towns, or adventures with the currency or the ways of hotels seldom come amiss. We know of one lecturer who made the success of his lecture by interrupting his eloquent account of the Italian lakes to describe the delicious character of an omelette he got at a lakeside hotel.

Tone Elimination.

In an interesting article on another page in this issue Mr. Stuart Black describes his method of making black-and-white prints minus half-tones, from ordinary negatives. In a letter to us he reminds us that a method for producing similar results was put forward some years ago by Mr. Rawlings (of oil-pigment fame), but in that case a somewhat elaborate and complicated process of pigmenting was employed. By Mr. Black's method very effective results resembling lino-cuts are obtained in a simple and direct manner by purely photographic means. Our readers who are experimentally inclined will welcome this new departure as an outlet for their activities.

PHOTOGRAPHY CLASSES

At this time of the year instructional evening classes for photography are being started in all parts of the London area, in addition to those available at the Polytechnics. In every case all further information and prospectus can be obtained on application to the Heads of the Institutes. The duration of the session is from the end of September to the end of the following June. We are indebted to Mr. C. L. Curtis, of Sydenham, for the compilation of the list that follows :—

LITERARY INSTITUTES.

City Literary Institute, Goldsmith Street, Drury Lane, W.C.2. Photography—Science and Art. Mondays, 7.30–9.30; Thursdays, 7.30–9.30; Fridays, 6.30–8.30.

Dalston Literary Institute, County Secondary School, Colveston Crescent, Dalston, E.8. Photography—Tuesdays, 7.45–9.45.

Hammersmith Literary Institute, 50, Brook Green, Hammersmith, W.6. Photography—Thursdays, 7.30–9.30.

Holloway Literary Institute, Holloway School, Hilldrop Road, N.7. Photography—Tuesdays, 7.30–9.30.

Goldsmiths' College, New Cross, S.E.14. Pictorial Photography—Mondays, 8–10. Photography (Technique)—Thursdays, 7.30–9.30.

Putney Literary Institute, County Secondary School, West Hill, S.W.15. Photography—Wednesdays, 7.45–9.45.

MEN'S INSTITUTES.

Battersea Men's Institute, Latchmere Road, Lavender Hill, S.W.11. Photography—Tuesdays, 8–10; Wednesdays, 8–10.

Bermondsey Men's Institute, The Alma School, Southwark Park Road, S.E.16. (Classes meet at Galleywall Road School, Rotherhithe New Road, S.E.16). Photography—Tuesdays, 8–10; Thursdays, 8–10.

Bethnal Green Men's Institute, 229, Bethnal Green Road, E.2. Photography—Wednesdays, 8–10; Fridays, 8–10.

Deptford Men's Institute, Clyde Street School, S.E.8. Photography—Fridays, 8–10.

Downham Men's Institute, Durham Hill School, Downham Estate, Bromley, Kent. Photography—Tuesdays, 8–10.

Kentish Town Men's Institute, Holmes Road, Kentish Town Road, N.W.5. Photography—Thursdays, 8–10.

North Kensington Men's Institute, Bevington Road School, Portobello Road, W.10. Photography—Thursdays, 7.45–9.45.

North Southwark Men's Institute, Orange Street School, Union Street, S.E.1. Photography—Wednesdays, 8–10.

Poplar Men's Institute, The Hay Currie School, Byron Street, E.14. Photography—Tuesdays, 8–10; Fridays, 8–10.

Stepney Men's Institute, The Raleigh School, Ocean Street, E.1. Photography—Thursdays, 7.30–9.30.

Walworth Men's Institute, The John Ruskin School, Beresford Street, S.E.5. Photography—Tuesdays, 8–10; Fridays, 8–10.

Woolwich, Vicarage Road School (apply to the Head of the Westhorne Evening Institute, Nesbit Road, Briset Road, Eltham, S.E.9). Photography—Mondays, 7.45–9.45.

Instruction will commence in the week beginning 28th September, 1936.

Fees, students living in the Administrative County of London :—

Literary Institutes (except Goldsmiths' College), one class per session, 7s. 6d.; each additional class, 4s. 6d. Admission to all classes for the session, 15s. 0d.

Goldsmiths' College, one class per session, 10s. 0d.; any number of classes, £1.

Men's Institutes, any classes, per term, 1s. 3d. (there are three terms in the session).

Students living outside the Administrative County of London may, in many cases, be admitted at the ordinary London fee. Particulars may be obtained from the Head of Institute.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Preparing for Enlarging

With the opening of the exhibition season and the close of the holidays the chief occupation of the keen amateur photographer during the autumn will be the making of prints. This means—in these days of miniature and small cameras—the making of enlargements. The following notes are intended for those who are now reaping the summer harvest.

ALTHOUGH many workers do enlarging all the year round, the time is fast approaching when enlarging will be far more general, and the amateur will be putting his summer's work to the test of enlargement. Some preparation now may save quite a lot of time later, and an hour or so spent in putting the enlarger and its accessories into condition will be amply repaid.

Putting the Enlarger in Working Order.

Dust will almost certainly have accumulated in quite large quantities on an enlarger that has been laying idle, and this is the first thing which should be removed. A soft duster and a camel-hair brush will soon accomplish this, and then the business of attending to the optical equipment can be proceeded with.

Condensers are often an unsuspected cause of trouble in enlarging; dust settles on those in the upright type, or else they become smeared through vaporisation. A very soft duster should be used for polishing these, and they should be taken out, preferably over a cloth-covered table, in case they should get dropped and chipped. If the two condenser lenses are in a brass mount it is seldom necessary to unscrew this unless the dust has worked in through the ventilation hole, but the amateur need have no fear, so long as they are returned in the correct way, with their curved surfaces facing one another

The lenses should be cleaned in the same way as the camera lens is usually done, with a very soft well-washed cambric handkerchief and a soft brush.

The carrier glasses should be cleaned thoroughly, as these are often the cause of imperfections in the enlargements, it being remembered that small spots are greatly magnified on enlargement.

In the case of horizontal enlargers, the easy running of the extension should be attended to, and usually just cleaning is enough for this, although a suspicion of grease is used by some workers, but is not recommended.

If the easel is an integral part of this type of enlarger it should be tested for parallelism to the carrier, and adjusted if necessary.

Illumination.

The illumination of the instrument is another point that may need attention; one of the best forms of illuminant is an opal electric lamp, somewhere about 100 watts. The owner of an old-fashioned enlarger may adapt his lamphouse to take an electric illuminant, and he will certainly find it very much more convenient than either oil or gas. Electric sets can be purchased from most good-class dealers at really moderate prices, and need only sliding into the lamphouse and correctly centring.

Naturally, the handy-man will prefer to rig up his own form of illuminant, and this is quite good, providing he assures himself that there is no danger from shocks.

Accessories.

Masks for the carrier can also be made by the handy amateur out of thin brass, and will prove invaluable when handling different-sized negatives. Masks should also be made for the easel both for giving white borders and for producing black borders. Both these have been described at different times in these pages.

Dishes are an important side-line to the enlarger, and now is an excellent time to invest in new ones. Enamelled steel is the finest material for these dishes, and if care is taken they will last a lifetime. The dishes should be of large size so as to allow room for handling large prints. Of course, makeshift dishes can be utilised, some quite good ones being made out of baking-tins coated with two or three coats of Brunswick black or anti-sulphuric enamel.

Workers using a vertical enlarger usually have a sheet of plate-glass to hold their bromide paper flat. Special masking and fixing frames can be secured for this, but run rather expensive, and the plate-glass, provided it is kept scrupulously clean, is really ideal for the purpose, as its weight ensures perfect flatness of the bromide.

Printing Papers.

The purchase of bromide papers presents something of a problem for the worker in a small way. He can of course, buy his material in small packets, and then he finds he wants a number of grades of paper, so that his expenditure on this commodity threatens to reach alarming proportions. The best plan is to acquire this paper gradually in larger quantities. Firms advertising in this journal will supply three dozen or six dozen sheets at a considerably less cost per sheet than buying them in small packets, and the amateur is thus able to acquire various grades gradually, and then to replenish his stock gently without too heavy an expenditure. It is extremely useful always to have paper in stock, as one never knows when one might want an enlargement in a hurry.

Preparing the Negative.

An outfit for spotting and retouching will be required, and should be kept in a special receptacle, so that all the contents are easily available.

The preparation of the negative itself before enlarging is a matter frequently overlooked or neglected by the amateur. For instance, there should be no finger-marks or other marks of any kind on either side of the negative, as these have a habit of becoming very obvious and on a large scale in the final print. Glass negatives should be carefully polished and the film side cleaned with either methylated spirit applied with a wad of cotton-wool, or else rubbed over lightly with Baskett's reducer and polished. This applies also to films.

All pinholes should be spotted out with a fine-pointed brush and a little water colour. A small black spot on the negative will give a white spot on the enlargement, and this is easier to deal with than to remove a black spot from the gelatine surface of the print.

One or two other gadgets may be prepared when getting the enlarging materials in readiness. A piece of cotton-wool on the end of a long piece of wire is a useful accessory, as also is a piece of dark card with a small hole in it, which can be used for vignetting and shading.

It should be mentioned, in regard to the papers, that a dry place must be found for the storage of these, and no chemicals or fumes should be allowed to come into their vicinity. A note should be made of the exposure necessary to make, say, a whole-plate enlargement from a $3\frac{1}{2} \times 2\frac{1}{2}$ negative, and then a table can be worked out for varying sizes.

The Royal Photographic Society 81st Annual Exhibition

Second Notice.

THE SCIENTIFIC AND TECHNICAL SECTIONS

IN our previous notice of this Exhibition reference was more particularly made to the Pictorial Section. This, with the colour prints, contains 279 exhibits. The other sections—devoted to Scientific, Technical, Record and other phases of the applications of photography—bring the total up to 1,494 exhibits, including lantern slides and transparencies.

In addition, displays of apparatus and materials by leading manufacturers are arranged in different parts of the building, and further increase the variety and interest of the exhibition as a whole.

At the opening of the show on September 11th, Mr. Dudley Johnston stated that in the Pictorial Section 94 entrants from this country had 120 pictures accepted, 51 from America had 62 pictures, the Continent produced 28 contributors with 44 pictures, and the Dominions and Colonies 18 with 24 pictures. He expressed the opinion also that the finest pictorial work to-day was no finer than that done thirty years ago, but the general standard is undoubtedly higher.

Colour Work.

What is said of the Pictorial Section, that individual work may be no higher, but the general level has been raised, applies also to the Colour Section. The President, Dr. D. A. Spencer, said that some of the Autochromes made in 1909 would, from a pictorial point of view, compare favourably with some of the lantern slides made now. But it is much easier now to make a transparency. The manufacturers have shouldered a good deal more of the burden. They are producing much more foolproof material.

This year there is a considerable preponderance of Dufaycolor, and unfortunately the lighting is rather too warm to permit of their being seen at their best. Each process requires different viewing conditions, and the arrangements at Russell Square are a compromise with which perhaps no one is quite satisfied. Colour photography is also responsible for some quite remarkable records of skin diseases—an application of colour work which is finding increasing use in hospitals, facilitating, as it does, the spread of information among medical men and assisting accuracy in diagnosis.

Lantern Slides and Transparencies.

The visitor to the R.P.S this year, after seeing the Pictorial Section, should turn to the Studio on the ground floor and inspect the Lantern Slide show. These are again displayed in cases illuminated from the interior. They represent a very high standard of technical excellence and are contributed by many well-known slide-makers, including W. A. Clark, James Shaw, Fred Lord, W. E. Hughes, R. Kermode, P. B. Dannatt, C. Cecil Davies, E. R. Butcher, Charles Green, Dr. A. Nawrath, G. B. Keary, Eric J. Hosking, G. Bird, J. Ludlam, and Frederick H. Low.

The colour transparencies will also be found in this section, and some striking results by the various colour processes are to be seen, including the Dufay process, Agfa, Finlay, Autochrome and Filmcolour.

Scientific and Technical.

On the second floor there are the sections devoted to Natural History work, Scientific, Technical and other applications of photography. The Natural History Section is always interesting, and this year contains some remarkably fine examples of this phase of photography, including notable work by G. B. Keary, F. W. Bond, E. J. Bedford, R. W. A. Burgess, Ralph Chislett, Harold E. Evans, Eric J. Hosking, Oliver G. Pike, Douglas P. Wilson, and Hugh G. Wagstaff.

In the room which houses the Natural History Section are also to be seen cabinets containing stereoscopic exhibits. These are invariably a great attraction to visitors, and include both stereoscopic prints and transparencies. Amongst the latter, both in monochrome and colour, are examples by H. Wormleighton which are, as usual, of outstanding merit.

Others by R. E. Shawcross, K. D. Sutcliffe, E. J. Bedford, and Dr. W. R. Grove, are worth attention, as also are the Grenz-ray transparencies of flowers by the Kodak Research Laboratories.

Awards.

In another room on the second floor the visitor will be keenly interested in the various applications of photography, and it is in this department that awards have been made. The Society's Medal has been awarded to Messrs. Edgerton, Germeshausen and Grier, Massachusetts Institute of Technology, for some remarkable specimens of high-speed photography. The Rodman Medal has been awarded to Thomas S. Beardsmore for photomicrographs, and the Hood Medal to J. Crowther Cox for still-life work. Prizes given by Professor G. Woodburn Morison have been awarded to G. Lovell Stiles and E. C. Le Grice for X-ray photographs. Practically every exhibit in this section is worthy of attention.

Press photography is well represented by contributions from James Jarché, Lancelot Vining, International News Photos, New York City, *The Times* Publishing Co., Ltd., *The Morning Post*, and James Maycock. Advertising, Record and Theatrical photography are also represented.

In the Meteorological, Aerial and Astronomical Section, infra-red photographs taken from the highest point ever reached by man (at an altitude of 72,395 feet) are of great interest. X-ray, Clinical and Geological photography have also some striking examples, some of which may not appeal to the taste of every visitor, but the photomicrographs are always fascinating and the record photographs show a number of fine examples.

Trade Exhibits.

The Trade is well represented by exhibits from Ilford Ltd. and Ross, Ltd., who have attractive exhibits in the exhibition room on the second floor. Agfa Photo, Ltd., David Allan, E. Leitz (London), and Zeiss Ikon, Ltd. have displays in another room on the second floor. In the entrance hall are displays by J. H. Dallmeyer, Ltd., Kosmos Photographics, Ltd., Zeiss Ikon, Ltd., Kodak, Ltd., Elliott and Sons, Ltd., Ilford Ltd. and Gevaert, Ltd.; while the Library is occupied entirely by Kodak, Ltd. with a display of their various apparatus and materials. Sands Hunter and Co., Ltd., and Soho, Ltd., are in Room 3. On the ground floor, with the Pictorial Section, are displays by Cinex, Ltd., Ensign, Ltd., Pathéscope, Ltd., Williamson Manufacturing Co., Ltd.; while on the staircase leading from the first to the second floor there is a display by *The Amateur Photographer and Cinematographer.*

BEHIND THE LEICA

MICROSCOPIC ACCURACY

OVER 75 YEARS EXPERIENCE IN THE MAKING OF THE WORLD'S FINEST MICROSCOPES IS EMBODIED IN EVERY LEICA

Leica

THE CAMERA OF MODERN TIMES

Ask any good class photographic dealer for a demonstration, or write for descriptive literature to

E. LEITZ (LONDON), 20, MORTIMER STREET, LONDON, W.1.

"....but the focussing screen is not like the ordinary ground glass?"

"No! While with the usual focussing screen there is always a considerable reduction in light towards the margins, and consequently quick and certain focussing is sometimes difficult, the focussing screen of the Ikoflex—the Zeiss Ikon reflex taking 12 pictures $2\frac{1}{4}\times2\frac{1}{4}$—follows a different system altogether.

"The Ikoflex focussing screen is in the form of a plano-convex lens, the under surface of which is matted. This construction gives a brilliantly illuminated picture, even to the edges, and thus facilitates focussing."

The Ikoflex is fitted with Zeiss lenses, Compur Rapid shutter to 1/500th second, frame sports finder, automatic picture counter, and automatic depth-of-focus scale for every stop. It is the perfect reflex for the serious amateur. By a clever setting of the position of the focussing screen parallax compensation is also provided for.

IKOFLEX

With Zeiss Triotar f/3.8 and Compur normal to 1/300th second.....**£14 15 0**

With Zeiss Tessar f/3.5 and Compur Rapid to 1/500th second.....**£20 10 0**

Most high-class camera dealers stock the Ikoflex.

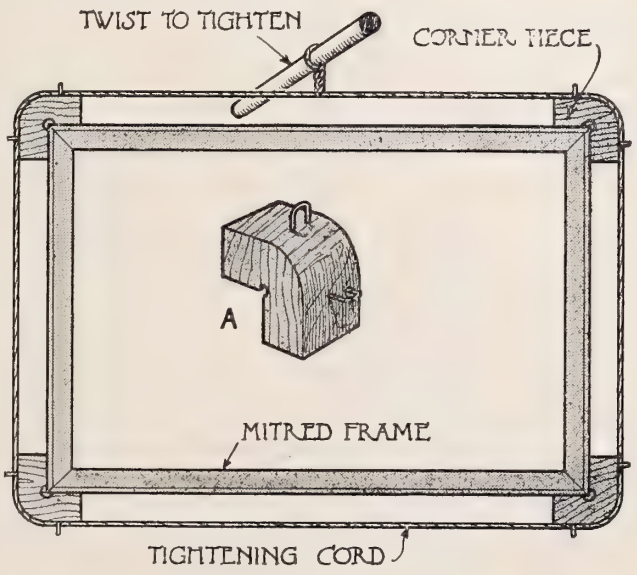
IMPORTANT
All Zeiss Ikon Cameras sold by us in Great Britain are equipped with distance and depth-of-focus scales in English feet. Also diaphragm scales are engraved according to the R.P.S. standard.

Readers' Hints, Tips and Gadgets

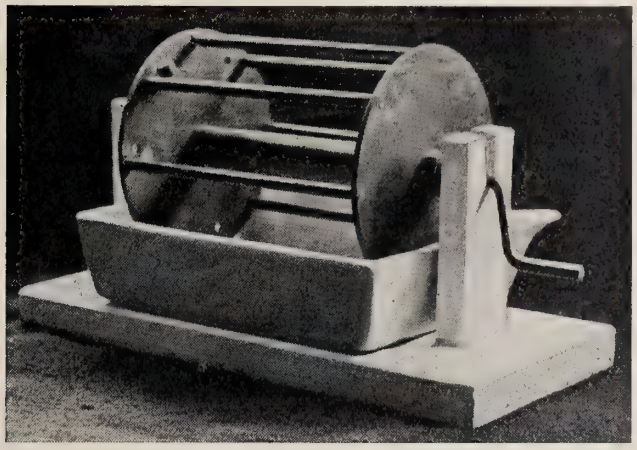
A DEVICE FOR FRAMING PHOTOGRAPHS.

VERY few amateurs attempt to frame their own photographs, except perhaps by the passé-partout method, and although delightful effects are often obtained this way, there is no doubt that in many instances a suitable wooden frame is a decided improvement.



Certain tools are required when making photo frames, and most important of all a cramp is necessary to secure and press the corners together when glueing. Cramps are rather expensive to buy, but a suitable device that will do instead is described.

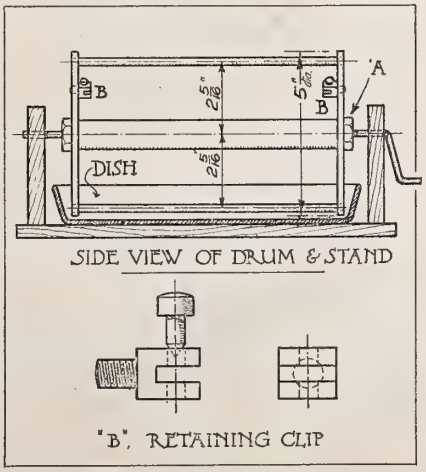
It consists of four corner pieces made from hardwood blocks, each about 1½ in. thick by 4 in. square, cut to the shape shown at A, and an iron staple is knocked into each corner at the angle shown.



A glance at the sketch clearly shows how the device is used. After the two ends of each side are mitred, glue is applied to the corners and each piece is placed in position on a flat table. The corner pieces are now added, and a strong piece of cord is threaded through the staples and along each side. This is drawn very tight by inserting a piece of stick and twisting the cord in the manner shown.

Care must be taken to see that the cord all the way round is exactly over the frame being glued. Otherwise one or more of the corner pieces will pull to one side and drop off while the cord is being tightened.

When dry the corners will be found to be securely fastened, but if further strength is required, small picture framing nails may be driven in after the glue has set. J. STOBBS.



A DEVELOPING DRUM FOR ROLL FILMS.

THOSE workers who like to see their pictures developing, but find the see-saw method rather tiring, especially after the first film, will appreciate this little gadget. As will be seen from the photograph, it consists of two vee supports carrying a drum, underneath which the developing dish is placed. It is as well to mention here, that although the idea could be adopted for any size film, the dimensions given here are for the popular 3¼ × 2¼ in. 8-exposure type. The main difficulty in constructing the drum was to find some material that could be easily worked and yet not corrode. For that reason, and because it does not absorb liquids, ebonite was chosen. The ends of the drum are made from two 5-in. diameter discs of ⅛-in. or $\frac{3}{16}$-in. ebonite with a ¼-in. hole at the centre. The two discs are then clamped together, and eight equally spaced $\frac{7}{32}$-in. holes drilled round the circumference on a radius of $2\frac{5}{16}$-in. After this the two are separated, and in one disc the holes are opened up to a ¼ in., and the other is tapped ¼-in. Whitworth. The centre spindle is also ebonite, 6-in. long and ⅜-in. or ¾-in. diameter. At each end and in the centre a ¼-in. Whitworth hole is tapped about ½-in. deep. These two holes are for the spindles upon which the drum revolves. For ease in bending, the one that forms the handle is made from ⅛-in. brass rod, while the other end is of ebonite. The actual rods that support the film (there are eight of them) are from ¼-in. round ebonite with one end threaded to fit in the appropriate disc. Before assembling the drum, the holes for holding the film clips must be drilled, and the position is important, otherwise the film will be too loose. One comes ½-in. from one of the struts in one disc, and the other is ½-in. from the same strut on the other disc, so that when assembled the two clips are in a line. These clips are of ebonite, and are shown at B.

The edge of the film is slipped in the slot, and the pin inserted. When the eight struts are screwed in the disc, the other in position and the centre spindle pushed in, the two spindles are screwed in, each having a nut shown at A, which when tightened locks the two discs firmly together. As can be seen from the photograph, the drum revolves in a vee slot in each of the two uprights. In use the whole is taken into the dark-room, one edge of the film is held in one of the clips, the drum is then turned, winding on the film, emulsion side out, until the other end can be slipped in the other clip. The whole is then slowly rotated over the dish of developer for the correct time. It is, of course, important to see that each turn of the film does not overlap its neighbour and that the emulsion side is on the outside of the drum. In view of the fact that ebonite does not absorb water the fixing can be carried out by the same method, providing the drum is rinsed before using again. N. GATES.

Outdoors

By E. APPLEBY.

Autumn Clouds.

MANY photographers are of the opinion that the autumn is the best time of the year for outdoor work, and this is certainly borne out by general observations, though precautions must be taken if the right effects are to be obtained. Let us look at some of the conditions.

Perhaps the finest feature of the autumn landscape is the wonderful colour of the trees and hedgerows, and as these consist of really a range of tones they are particularly suitable for photography. The edges of the woods are very effectively clothed, and to get the best must need special materials.

Without doubt panchromatic is the best material to use, and as this is very easily obtained nowadays no difficulty need be anticipated in that direction. To use this to its utmost advantage, however, a filter is necessary, and here is where many people stumble. There seems to be a diversity of ideas on filters, many amateurs being under the impression that you simply fix a two-times filter on the lens and give twice the exposure. This is by no means the correct procedure.

It is essential that the worker use a certain kind of material with a certain filter all the time, so that he can be reasonably sure of obtaining the same effect every time. Thus, it often happens that a two-times filter used with a certain brand of plate will need twice the exposure, while another brand of sensitive material with the same filter may require three times or even a little more.

The last of the Harvest.

Gathering Autumn Leaves.

Possessors of humble box cameras need not put their instruments away under the impression that they are of no further use during the autumn and winter. Of course, with the small aperture of the lens the exposure will be rather long, but the camera can be rested upon something and a short time exposure given. In this event it is essential to keep a sharp eye on the breeze in order that trees do not sway too much.

The autumn season is also an ideal one for clouds, and here again the same filter can be used, although many workers prefer a one-and-a-half times. This, again, is a matter for the individual

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

...n the AUTUMN

worker, and depends a good deal upon his method of working.

Already there is a mist appearing in the early morning, and this clothes quite ordinary objects with an air of romance which can be captured by the wary amateur. Here the filter should definitely be dispensed with, and the "chrome" type of film is ideal for this type of subject. Exposures are fairly short, as the mist reflects quite a fair amount of actinic light. Eyes should be kept open for subjects which have been ignored before; the mist softens the outlines and gives the new subject a much better effect. Figures appearing through the mist also are very effective as pictures, and should not be ignored.

The Apple Crop.

One of the Old School.

Wet autumn days hold endless possibilities for the city or town worker at this time of year, because following the heavy showers one often gets a brilliant burst of sunshine, and the consequence is that splendid reflections are found in the puddles, while glistening mackintoshes and umbrellas all add to the general pictorial effect of the scene.

Fallen leaves make a good subject for park workers, and many subjects will appeal to the alert amateur. The keeper brushing up the leaves, and the children collecting, will also be aids to pictorial effects. Swirling leaves can be caught on windy days by photographers with cameras possessing large-aperture lenses.

The negatives of autumn subjects will require careful handling. Such things as the rain-swept city streets, for instance, will respond best to the water-bath system, in order to avoid too violent contrasts. Mist subjects must be very lightly developed, otherwise the mist will be lost. Thin negatives are the order of the day for autumn work.

The farm will provide good subjects for the worker within easy reach of the country, and he would do well to spend as much of his leisure time as possible searching the fields round the immediate district. The plough will probably provide the best studies, and even if the weather is dull this is not a difficult subject where horses are concerned, since the photographer has plenty of opportunity to choose his viewpoint and get good backgrounds, which are essential in this kind of work. Clouds should be secured with the landscape if it is at all possible to do so.

Autumn in the Park.

MAKING Good Bromide ENLARGEMENTS

A Practical Article for the Beginner by J. M. BARNARD.

THE perfect bromide enlargement should look exactly like a contact print made in a printing frame from a good negative of large size. It should be just as bright and clear and, at the ordinary viewing distance, just as sharp as the little contact print you made "to see how it had come out."

To get a print to look like that you must expose and develop correctly. If a print from a good negative is flat and muddy, you may be pretty sure it is over-exposed and under-developed. If you give the next one about half the exposure and keep it in the developer a good deal longer, at least another minute, you will find you are on the right track. An under-exposed print will proclaim itself by being obviously too light all over; it is the over-exposed ones that are apt to puzzle the beginner.

Trial Strips.

What exposure to give is, of course, always a problem at first, but it should not take long to get the hang of it, provided you use one variety of paper only at the start. It helps enormously to keep a record of exposures, either in a book or on the back of the print, marking it with a soft pencil before you put it in the developer.

If you alter the degree of magnification, that is to say, if you use only a little bit of the negative to fill the whole sheet of paper, you must record that too, because the greater the degree of magnification the longer the exposure required.

If you keep these records you will be able, after a time, to match up a negative with an older one and give the correct exposure right away.

At first, however, trial strips are an absolute necessity, unless you want to waste quantities of paper. The usual method is to use a whole sheet, or at any rate half a sheet, of paper, and to cover it up in turn in three or four strips, so that each strip has a different exposure; you then develop the piece of paper and decide which exposure is correct. That method may suit you, and perhaps it is the best right at the start, when you don't know whether the exposure is likely to be ten seconds or two minutes.

But very soon, if you consult your records, you are more likely to find yourself in doubt whether the correct exposure is ten seconds or fifteen, and then you will find there is a better method available. Cut up one of your sheets of paper into pieces about two inches by one. Take one of these pieces and fold it in half, with the emulsion side outwards. Hold it, folded, against the enlarging board where the densest part of the image in which you require detail comes; this will probably be the face in a portrait. Give an exposure of, say, ten seconds. Now turn the folded paper over, so that the other half faces the light, put it approximately on the same bit of the image and give an exposure of, say, fifteen seconds.

Now develop the paper fully, slip it into the fixing bath, and you can have a good look at it in white light. You will have two little pictures, each an inch square, of the same bit of image, and they will be much easier to compare than different parts of the picture. You may find that one of the two exposures is just right, or you may have to give a little more or a little less or split the difference. But at any rate, if you have consulted your records and have timed your exposures accurately, you should not have to make another trial for that particular negative, paper, and degree of enlargement.

Development.

The secret of developing bromide prints is to use the developer fresh, strong, and with the right amount of potassium bromide, and to give the solution plenty of time to do its work, so that it can develop the image right down in the emulsion and not just on the surface.

For this reason I advise amidol, because unless it is freshly made up it won't work at all. It isn't reasonable to take the dregs of any old bottle of M.Q., made up months ago, and expect it to produce a print of exhibition quality.

The amidol only takes a couple of minutes to make up. Take a pint of water, if possible with the chill off, and put in one ounce of soda sulphite crystals (or half an ounce of the "dry" powdered sulphite, which dissolves quicker), sixty grains of amidol and ten grains of potassium bromide, and you have got as good a developer as you can want for any bromide paper you are likely to use.

I know some people advise less bromide, fearing greenish blacks, but if you expose correctly you will have no trouble, and your paper will keep clean and stainless.

Your fingers won't, though, if you wallow in the solution, so why not learn to use forceps? Really good ones, in stainless steel, cost a shilling. Personally, I never put a finger into either the developer or the fixing bath, and the prints and I are all the better for it.

As regards the time of development, I have never understood why manufacturers suggest such short times as a minute and a half or two minutes. My own prints seldom take less than three minutes and often as long as four or five; a print which seemed dark enough in two minutes would almost certainly prove to be of very inferior quality in the blacks. I must admit that I develop by inspection, which is supposed to be quite wrong, yet I never get a print too dark unless, of course, I have over-exposed the paper.

Working in Comfort.

I believe in working in comfort, and my dark-room is anything but dark. The safe-light is a greenish yellow, well diffused, and the paper seems to stand almost unlimited exposure to it, at a distance of three feet or so, but I cover the dish with a piece of card until I need to look at the print. That is the way to combine comfort with safety.

From the developer the print is removed with the forceps to a stop bath, consisting of half an ounce of acetic acid in 25 ounces of water. Still holding it by the forceps I rinse it round for a few seconds in this and then transfer it straight to the fixing bath made up to the Kodak acid-hardening formula, fresh and strong, never used before and never to be used again. Moving it round for a few seconds and making sure that it is really immersed, face downwards, I at last let go, rinse the forceps under the tap, hang them on a hook over the developing dish and am ready for the next print.

Fixing and Washing.

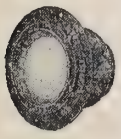
It pays to use plenty of fixing solution, in a dish a good deal bigger than the prints, and to give a little more time than is thought to be necessary. Up to half an hour will do no harm, and the prints should be well moved round and separated from time to time. A really well fixed print will be pretty permanent after considerably less washing than many people believe necessary, while no amount of washing will do any good if the fixing has been scamped.

Washing must be thorough, of course, but if it is done properly it need not consume a great deal of water or time. If the prints are well moved round in the water and well drained each time it is poured off them, half a dozen changes for thin paper, or perhaps ten for thick, should do all that is necessary, especially if you make the early changes quick and gradually increase the intervals.

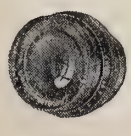
This part of the job, for an amateur's small batch of prints, should never take more than forty-five minutes, but you must pay attention to it and see that each print is properly treated if permanence is wanted.

1860 **DALLMEYER** 1936

FOR

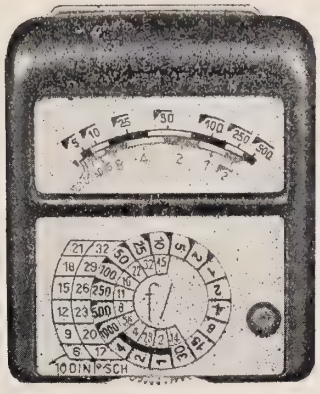


THE FINEST BRITISH LENSES



"Adon" Adjustable Type Telephoto Lens.—The only lens of its type available. Fits any make of camera employing a focussing screen. Focal lengths from 4 to 44 in., covers plates from 2¼×1⅝ ins. to 15×12 in. Price **£7 0 0.**

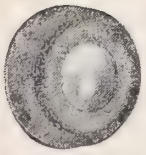
"DALLON" Fixed-separation, Fixed-focus Tele-Anastigmat Lenses.—Made in four series, f/5.6, f/6.5, f/7.7 and f/6.8. Fit all makes of roll-film, reflex and focal-plane cameras. Indispensable to the keen photographer. The smallest, lightest and most inexpensive tele-anastigmats made. Prices from **£5 0 0.**



"PENTAC" f/2.9.—The original, and by far the most highly corrected extreme aperture anastigmat. Made in focal lengths from 1 to 12 inches. Fully corrected for astigmatism, spherical, colour, coma, etc. The ideal lens for a reflex camera. Prices from **£8 15 0.**

"Super-Six," a fully corrected anastigmat working at the enormous aperture of f/1.9. Special models made for use on the Leica and Exakta Cameras. Made in focal lengths from 1 to 6 in. Prices from **£11 0 0.**

- *76 YEARS' experience in the manufacture of optical equipment for Photographic, Cinematograph and allied purposes.*
- *Exclusive designs covered by British and foreign patents.*
- *Uniformity—due to the exacting tests prior to issue of each lens by highly trained optical scientists.*
- *Manufacturing—latest and finest precision machinery, ensuring accuracy of polished surfaces to half a millionth of an inch.*
- *Price—It is only because Dallmeyer Lenses are the finest it is possible to manufacture that they are not the lowest in price.*

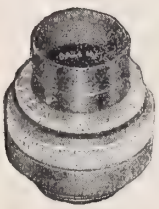


NEW

The "SIXTUS" Photo-Electric Exposure Meter.—The very latest and most sensitive exposure meter. Complete in bakelite case, **£5 5 0.**

Leica model now available

Catalogues and booklets sent gratis



"Wide-Angle" Anastigmat.—The finest wide-angle anastigmat obtainable. F/6.5 for focussing; f/11 to f/16 for taking.

2⅜ in. focus,	3¼×2¼ in.	£5 5 0
3¼ " "	¼-plate	£5 10 0
4¼ " "	7×5 in.	£6 0 0
6½ " "	8½×6½ in.	£7 10 0
7⅞ " "	12×10 in.	£8 10 0

"PORTRAIT-ANASTIGMAT."—A new series of Portrait anastigmats designed to meet the demands of the modern professional photographer. Made in three series, f/3.5, f/4 and f/6. Focal lengths 9 to 18 in. Prices from **£11 10 0**

F/1.5 "SPEED" Anastigmat.—A large aperture anastigmat for amateur cinematography. Made in focal lengths from approx. 15 mm. to 3 in. Fit most makes of 16-mm. ciné cameras. A new anastigmat, computed from first principles, specially for amateur cinematography. All lenses supplied in neat micrometer focussing mount, readily interchangeable. Prices from **£10 0 0.**

"CINÉ-TELEPHOTO" Lenses.—The finest telephoto lenses procurable. Instantly interchangeable on most makes of 8-mm., 9.5-mm., and 16-mm. ciné cameras. Focal lengths from 1½ to 12 in. Special mounts stocked for Cine-Kodak Cameras, Filmos, Victors, Cine-Nizo, Dekko, Miller, Ensign Simplex, etc., etc. In micrometer focussing mount. From **£4 4 0.**

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

A "Falling-front" Attachment *for a Hand-Stand Camera*

By DAVID CHARLES.

Fig. 1. The gadget consists of a short strip of half-inch wide iron, with a quarter-inch hole bored near each end. A "quarter-Whitworth" screw with two flynuts completes the "outfit."

WHAT the little gadget shown in Figure 1 has to do with a "falling-front" will at first sight appear a mystery to most users of a hand-stand camera. To many, probably, the advantage of a falling-front will seem just as mysterious, since it is a provision which scarcely exists in hand cameras, and consequently the use of it is largely unknown in amateur practice.

Yet there are quite a number of circumstances in which a "falling-" or "drop-front," as it is sometimes called, enables a photographer to obtain "just what he wants" in a way quite impossible by other methods. For instance, those who delight in making "firelight studies," by the simple and good old method of letting off a flash in an otherwise empty fire-grate, or by the better method of putting a photo-flood loosely wrapped in tissue-paper there, will be familiar with the difficulty of looking downward into the group without making the said fireplace assume peculiar and unnatural angles. If, to avoid that unpleasant result, the photographer assumes a low viewpoint, what happens? Uncle George's legs, and the side of his armchair, loom with tremendous prominence, and baby and dog Toby tend to be partly hidden. Undoubtedly, a view from above, as one sees the group normally, is the best for this type of subject, were it not for the distortion of vertical lines which usually cannot be avoided.

I am perfectly well aware that it is practicable to level the camera at the higher viewpoint, but even if one is satisfied to enlarge from what comes in the lower part of the negative, excluding the detail of unwanted wall above the group, one still finds that quite a lot of the foreground of the main subject is excluded from the view. The falling-front is a device which allows the lens to fall below its normal position, when it projects upon the film or plate less of the top part, and more of the bottom part, of the view one is aiming at. In other words, it does precisely the opposite to what the *rising*-front does when one is photographing a tall building. That, I hope, will be either A, B, or at least C to every reader of "The A.P."

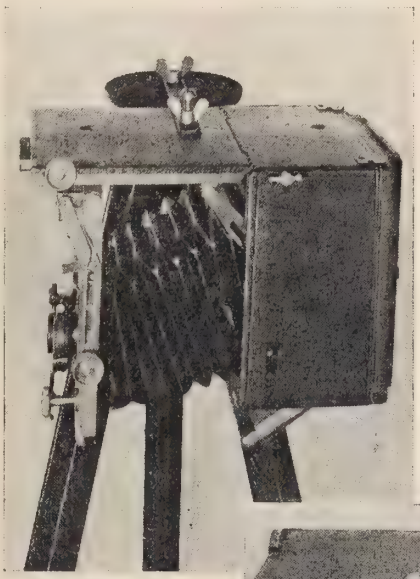

Fig. 2. By means of this simple attachment a camera can be inverted, when the rising-front "falls" instead.

Before proceeding to demonstrate the "gadget," shall I quote just one more example of its application? The enthusiast in architecture will inevitably have encountered the difficulty of getting a looking-down view of a tomb or similarly shaped object without distorting his "uprights." Yet such subjects very often do want looking down at to appreciate them. From those two examples I have no doubt the reader will call to mind instances of his own experience where this facility would have given him improved results.

Well, with the extraordinarily simple device shown here, any camera which has rising-front is given an equal degree of drop to the lens, by just inverting it. Figure 2 shows it in actual use, and 3 explains how it is attached to camera and stand. The whole thing consists of a short length of flat strip-iron, which can be obtained at almost any ironmongers, and a "quarter-Whitworth" screw with *two* flynuts, which can be obtained at the same place. Two holes are bored in the strip about four inches apart (according to the camera and stand used). One of the flynuts is used to secure the strip to the stand, the other being to tighten on the screw which is inserted through the other hole in the strip into the camera bush. And the cost? Fourpence!

Fig. 3. One of the flynuts is used to hold the strip on to the normal tripod screw, while the other nut secures the bolt when screwed tightly into the camera bush.

The Hampshire House Photographic Society is proposing to make a photographic record of all the antiquities in the County of Surrey. This will include not merely old buildings which have existed for several hundred years, but also barrows, camps and tumuli of surpassing age. A few antiquities are protected by H.M. Office of Works, but many hundreds are doomed to disappear with the rapid approach of the builder, and the only records to remain will be photographic. The members of H.H.H.P.S. intend to give themselves the self-imposed task of visiting the various places mentioned in the Surrey County Council's list and producing whole-plate prints of each and every item—a total of about 650.

When complete the entire collection of prints will be handed over to the Surrey County Council. There may be readers of "The A.P." in the London and Surrey districts who are interested in this work of public importance and who would like to assist. The general secretary of the club will be pleased to hear from any such readers if they will kindly write to him at "Hampshire House," Hog Lane, Hammersmith, London, W.6.

The LONDON SALON of PHOTOGRAPHY

Second Notice.

NOW that the London Salon of Photography has been open to the public for a week a good idea of its success may be gauged from its reception by visitors to the Gallery at 5a, Pall Mall East. The general impression is that it is a show of exceptionally high merit and one of the best of the series. This is due, not only to the excellence of individual prints, but to the remarkable "vitality" and brightness of the exhibition as a whole. Probably no collection of prints of such superb technical quality has previously been seen in London.

We have already referred to the work by the members of the Salon and to that of other British workers. There are others, however, equally deserving of reference whose work is notable. Merlyn Severn, in particular, is a newcomer whose prints of the Russian Ballet are outstanding, and Leo. A. Leigh is another with some notable figure work. Gilbert Adams (son of Marcus) shows that he is progressing on the excellent lines laid down by his father, and the same may be said of Anthony Basil, whose work already rivals that of his father, Angus Basil. Mr. and Mrs. J. H. Ahern are both progressing on the same lines with new angle photography very successfully, and two fine portraits by Richard N. Haile stamp him as a master of his craft. Arnold Longman is working worthily in the traditions of the late Herbert Lambert, and Walter Thomas continues his series of legal portraits with a strong but rather overdark portrait of the Lord High Chancellor.

We are glad to note that the British workers make such a strong showing in this year's Salon. No less than 217 prints by 92 exhibitors are on view, and the entire British Section of the Salon has been invited to America for display in New York, Philadelphia, Chicago and San Francisco, under the ægis of the British Chamber of Commerce.

The variety of the exhibits at the Salon is clearly indicated by the fact that there are contributions from the following countries, and all of high merit: United States, France, Germany, Italy, Belgium, Spain, Holland, Switzerland, Denmark, Sweden, Norway, Hungary, Austria, Czechoslovakia, India, Ceylon, Australia, Java, Japan, Egypt, China, New Zealand, Canada and South Africa.

Amongst outstanding work from abroad after that from the United States, which is again exceptional, are the prints from Hungary and Italy and France, each of which makes a good showing, and Australia has some strong exhibits. Among the American contributors we would particularly mention R. Bagby (New York), A. Bahnsen (Ohio), Jack Barsby (Hollywood), A. de Lardi (Drexel Hill), Forman Hanna (Arizona), G. H. High (Chicago), Mrs. H. Sheldon (New York), K. Dudley Smith (New York), Dr. Max Thorek (Chicago), S. Grierson (New York), Miss F. Vandamm (New York), A. B. de la Vergne (Denver), W. West and S. Insull (Chicago), F. B. Bristow (Kansas), A. Fassbender (New York), Miss R. Brownell (Rhode Island), Dever Timmons (Ohio), and J. D. Toloff (Illinois); while the Japanese element in America is worthily represented by H. Fukuyama, H. Y. Hayashida, S. Izumi, and T. K. Shindo, all of Los Angeles.

From Italy, in addition to the work of Dr. E. G. Boon already referred to, notable prints are to be seen by F. Balocchi (Florence), F. Biglietti (Turin), Giulio Cesare (Turin), C. Fatini (Rome), I. Bertoglio (Turin), F. Vender (Milan), and M. Vittone (Turin).

The Hungarian pictorialists are strongly represented this year, although we understand that a number of exhibits from this part of the world (and also from Australia) arrived too late for submitting to the Selection Committee.

Practically all the workers from Central Europe use glossy bromide for their exhibition prints, and when seen under glass they have a quality and strength that compels attention. This is notably the case with the exhibits by Dr. T. de Csörgeo, M. Eitner, F. Csiz, I. Kinszki, B. Leavitt, G. Halberg, J. Pecsi, G. Seiden, K. Szollosy, all of Budapest, and Dr. R. Forg and H. H. Theyer, of Vienna.

Some fine head studies are again exhibited by M. F. J. Coppens, of Holland, and Jan de Meyere of Stockholm shows his mastery in high-key work of a very individual type.

This year a number of good things by Chinese workers are to be seen, those by Liu Shu Chong, of Shanghai, and Chang Yin Chuan, of Peiping, being typical and interesting.

Belgium, headed by Leonard Misonne and Pierre Dubreuil, has also a good showing, and the prints by C. Buyle, P. Cools, Maurice Deckers, J. Duivepart and V. Guidalevitch are worthy of note.

India is again well represented with characteristic work by T. L. Bhalerao, W. N. Bhat, S. K. Koparkar, N. N. Sethna, S. Madon, L. Skvirsky, Dr. Don A. Cavalho and S. J. Kharegat.

In addition to work by Harold Cazneaux, Dr. Julian Smith, and John B. Eaton, of Australia, there is a fairly good showing this year from that part of the world and New Zealand, including D. Fraser, Miss T. R. Kent, A. L. Shmith, F. W. Flood, H. E. Gaze and Monte Luke.

Canada is represented by J. Helders, Y. Karsh, H. G. Cox, F. Halliday and C. M. Johnston, while C. Kenny and Will Till from South Africa show some good work.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

AN INCLINED ENLARGER

By HARRY EMMETT.

A simple and practical method of using the enlarger in a small space.

WHILE appreciating the convenience of the vertical form of enlarger as compared to the horizontal, many amateur enlarging enthusiasts choose to knock along with their original home-made apparatus rather than face the somewhat formidable task of mounting it vertically because a vertical mounting that will work smoothly and yet be rigid requires rather more workshop facilities than most of us possess.

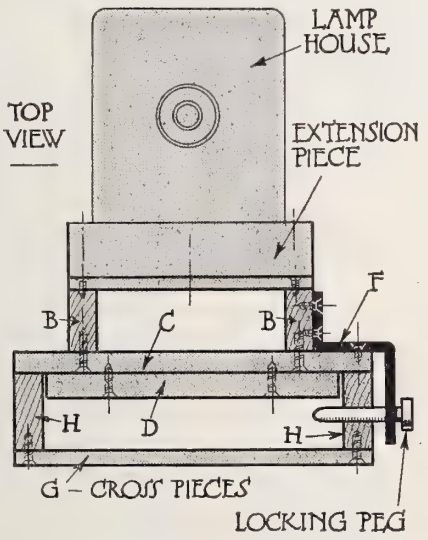
I have, however, solved the problem by adapting my horizontal enlarger in the following manner: the enlarging unit proper simply slides up and down a ladder or slide which is inclined at an angle of about 20 degrees to the wall. The easel consists of a drawing-board laid across two arms which project from, and at right angles to, the lower part of the slide, the easel thus making an angle of about 20 degrees to the horizontal. This angle is small enough to make the bromide paper or printing frame stay "put" on the easel, but large enough in the case of the slide to stop any tendency of the moving part to tip forward. The moving member is fixed at any desired height up the slide by simply pegging into a row of holes bored down the side.

The two main points to watch in construction are, first, that the distance (D) between enlarging lens and slide (see Fig. 2) is at least half of the largest dimension of bromide enlargement required, and, second, that the front edge (E) of the moving part comes in front of an imaginary line drawn from the centre of gravity of the moving unit perpendicular to the floor, otherwise it will be top heavy and tip forward. In practice this latter point is best taken care of by seeing that the front edge (E) comes several inches in advance of the enlarging lens.

The slide may be made of two lengths of $2\frac{1}{2} \times 1$ in. planed timber running parallel about six or seven inches apart, and braced ladderwise on the back by three pieces of wider stuff nailed or screwed on at top, middle and bottom.

If the affair is required to be portable, however, it may be made much shorter and some sort of stout baseboard and upright will be required. Alternatively, the bottom of the slide may be lightly clamped or hinged to the working bench and allowed to lean against the wall.

Now for the moving part. The enlarging lantern, which is presumably already on some sort of baseboard, is set up on two lengths of the $2\frac{1}{2} \times 1$ in. timber (B) and two pieces of similar wood (C) screwed across at each end (Fig. 1). Two more pieces are then sawn (D) and screwed on so that the



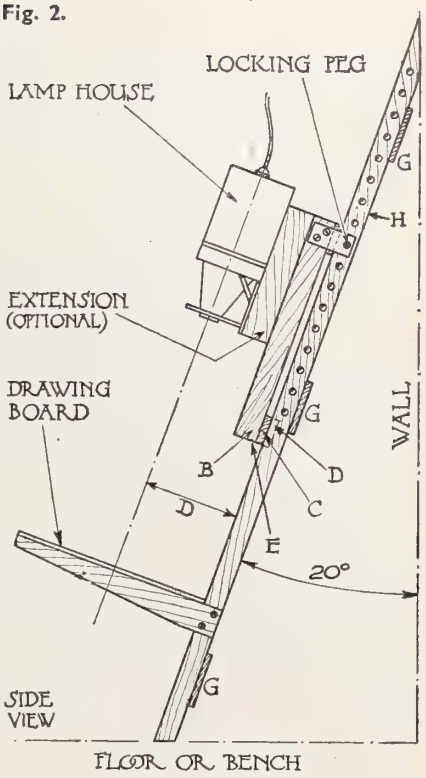


Fig. 1.

assembly will sit comfortably between the runners and slide up and down without too much side play. The gadget for locking it at any desired height on the slide is simply a piece of stout sheet metal about 6×2 in. bent as shown (F) and screwed on preferably at the rear end of the unit and so arranged that the free limb of the bracket overhangs the side of the slide. The overhanging portion is drilled with a 3/16ths-in. or $\frac{1}{4}$-in. hole (preferably before attaching) and a number of corresponding holes bored down the side of the slide so that by means of an iron peg (a 6-in. nail does nicely) the unit can be locked at any height up the incline. It will be found that the dead weight of the unit on the peg effectively rules out all possibility of movement

Fig. 2.

or vibration during exposures—an important point.

The adjustment of height even in the dim light of the dark-room is a matter of seconds only. The unit is simply slid to the required height with the left hand while the right hand "feels" with the point of the peg for the proper hole. When building, the best plan is to leave the boring of the holes to the last. A pencil point can then be inserted through the hole in the bracket and the correct track for the line of holes clearly marked on the side of the slide by pushing the unit once or twice up and down the incline. Holes may then be bored on this line at intervals of one or two inches and extra ones added later if and when required.

As an added refinement the holes may be marked at leisure with numbers denoting the exact degree of enlargement and the whole painted dead black with the following mixture:

Methylated spirit .....about 8 oz.
Powdered shellac..1 heaped teaspoon.
Lamp-black ..2 heaped teaspoons.

Shake the mixture well for five minutes to make sure the shellac has all dissolved before applying. Incidentally, this is an excellent black for any optical work. It dries perfectly in two minutes to a dead black matt surface, does not rub, and is cheap to prepare.

September 23rd, 1936

At the

By M. TAYLOR

Here is a suggestion for autumn photography indoors by daylight. For the amateur to whom camera work out of doors at this time of year does not appeal, it offers endless possibilities for picture-making in comfort.

Autumn sunshine.

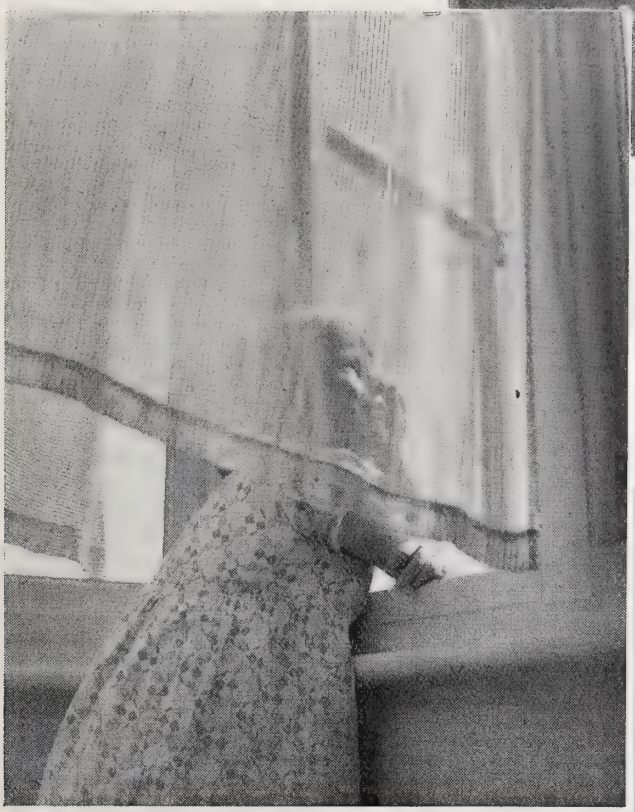
WITH the sun fairly low in the sky, as it will be for some time to come, attractive indoor pictures can be taken at almost any window with a clear view of the sky. Only slightly longer exposures than those given outside will be necessary, and harsh shadows can be avoided if a white cloth is hung over a chair or screen to reflect some of the sunshine on to the dark side of the subject.

Look out for awkward reflections in the window-glass; a small movement of the camera is usually all that is required to eliminate them. Curtains, providing they are of light-coloured thin material or net, stop very little light, and are useful in serving to soften the somewhat hard, bare lines of the window frames without unduly lengthening exposures.

If much sky can be seen through the window, it is best to use panchromatic material

Something doing below.

The last crumb.



"There it is!"

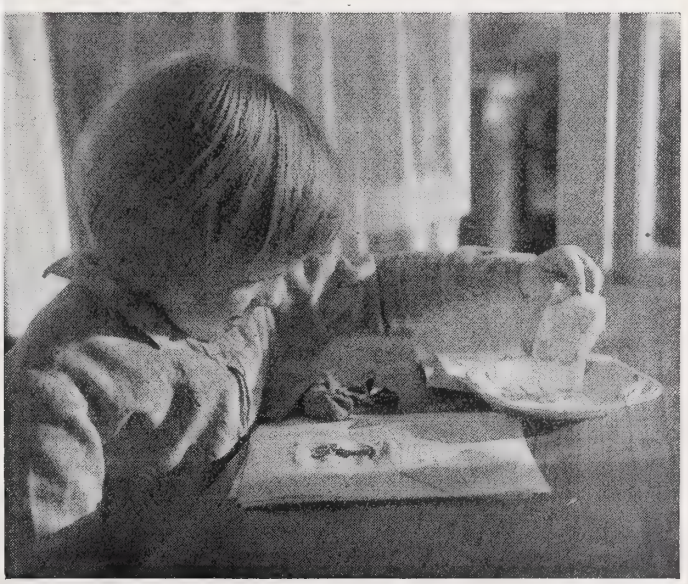
Window

and a pale yellow filter. This will tone down the sky and avoid that white, empty look, while interest will be concentrated on the brighter sunlit figure.

The actual exposures given for most of the pictures reproduced were 1/25th of a second at f/4.5, in October (between 11 a.m. and 3 p.m.), using Panatomic film with a medium filter.

As the winter months approach and the light decreases in power and becomes more yellow in character, faster panchromatic films or plates should be used and the exposures increased. The subjects are such, however, that can be given up to one second's exposure without showing movement.

Morning light.



Although these are all pictures of children, the window is equally suitable as a setting for portraits of older people. The side lighting provided by the sun slanting through the window, together with the weaker light on the other side from the reflecting cloth, gives excellent modelling to the features.

Crumbs for the birds.

Autumn and winter sunshine is much softer in quality than the brilliant summer sun and results in more pleasing portraits, so make the most of it now. The character of the light is of great assistance in avoiding harsh contrasts of tone, which are fatal to such subjects. If there should be any such tendency the remedy is to increase the exposure and curtail the development time.

If plates are used for these subjects instead of films, they should, of course, be backed to avoid halation.

Transfers.

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLII.

Dr. E. G. BOON.

From information communicated to our Special Representative.

"MY exhibition prints are made in no special way; they are merely selected from the yearly batch I usually produce. So may I use this method of selection as a peg on which to hang a few remarks useful to aspiring exhibitors?

"I have been an exhibitor for more than forty years, and during that time have sat on many boards of selection at photographic shows. The best photographs of my yearly batch are very often not suitable for exhibition on the walls of a show, and so they are relegated to the portfolio.

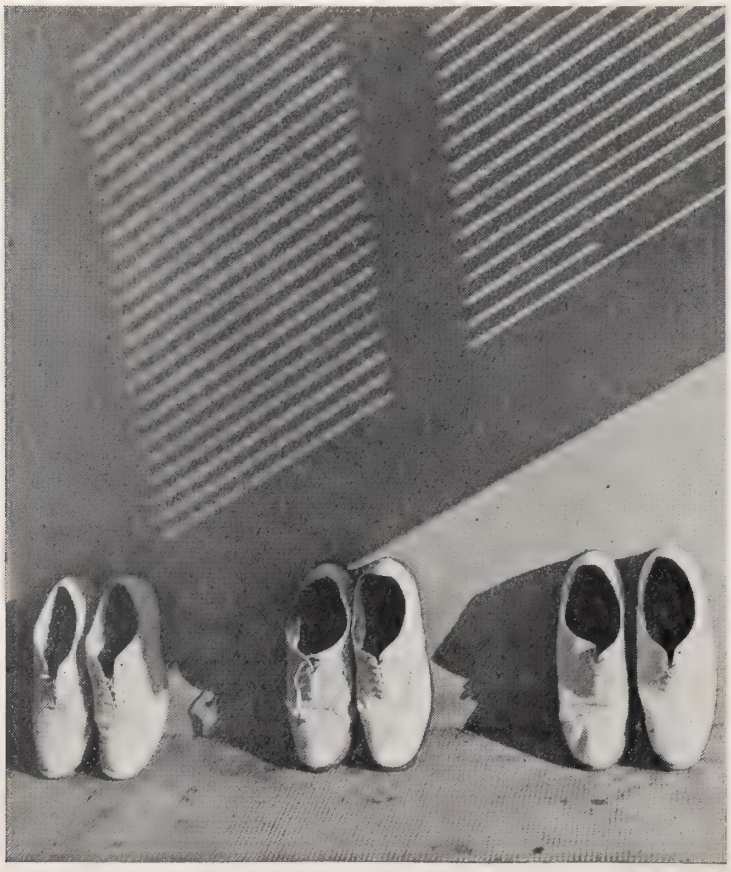
"For exhibition purposes, except in certain high-key pictures, the interest must be concentrated, the shape conform to the regulation size mount, and the intention of the photographer be self-evident and not require prolonged analysis. It is important also to remember that the print is going to have neighbours, and that there must be no quarrelling. Technique of a very high order is now required, and few pictures lacking this, even if they are full of originality and design, will be accepted. A few do escape the vigilance of the selecting committee, but these gate-crashers are steadily diminishing in numbers.

"It is often advised that the exhibition print should be stronger than the portfolio print; but this does not mean that the effect aimed at and secured should be lowered in tone for exhibition purposes. It is much better to consign the print to the portfolio than to send it in for exhibition, bolstered up for the occasion.

"Some of my prints are over-enlarged, and over-enlargement for some reason or other always shows up on a wall, and is very evident to the selectors. Any prints that I am doubtful about for this reason I refrain from exhibiting.

"A point that is constantly being raised is the size of the print for exhibition purposes, and many strongly advise that anything smaller than 10×8 in. is unsuitable. This, of course, rules out some of the most charming effects in photography. For many subjects that are full of delicacy and pictorial suggestion lose these qualities when enlarged.

"To some extent this is obviated in some shows by having screens on which the smaller and higher-key pictures are shown, and there one may find many charming prints. As in other forms of graphic art the size must be determined by the character and treatment of the subject. A miniature on ivory and a gallery picture are very different things.



"There is one thing I have learnt in a long experience of photography—that it is quite impossible to make a good photographic picture from a bad negative. All my early work was done in platinum and carbon, and these required negatives of a very high order. Although now working in bromide and chloro-bromide I find negatives of a different gradation are necessary to produce exhibition prints, but the quality must be of the best.

"Chemical fog is just as much an enemy in the latter as in the former processes. The negative is, in fact, the whole thing. I have met many men who boast that they can make a good print from a bad negative; I have yet to see them do it. Many of the prints sent in for exhibition bear evidence of their failure to perform such a feat.

"I believe it is customary in this series of articles to add some technical detail as to the method of the worker. I am not a miniaturist. I am old-fashioned, using a quarter-plate reflex and panchromatic plates.

"Finally, the surest aid in the selection of exhibition prints is frequent visits to photographic shows of the standing of the London Salon and the R.P.S."

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

LIKE most other things, portraiture takes a bit of doing if it is to be done well. A good deal of preparation and forethought is necessary; the lighting is a supreme consideration; and pose and expression have to be caught just at that moment when they not only represent the sitter most favourably, but also convey an impression of his or her character or personality.

Portraiture and Personality.

As far as personality is concerned, No. 1 of the prints reproduced on the opposite page—"Barbara," by R. Riley—does manage to get it across very well.

The lighting, except that it is rather too close to the figure, is quite well arranged, and the pose does not call for unfavourable criticism. The setting, however, is much too aggressive with its very noticeable pattern, and the dress is a good deal too much on the lightish side. With but a little thought and contrivance beforehand, both of these unfortunate features might have been avoided, for the advantages of a plain background are obvious and do not need demonstration, and, as far as the dress is concerned, if it were impossible for it to be changed, its tone might have been deepened by the simple expedient of interposing a screen or limiting the direction of the beam of light.

The head, perhaps, might be placed a little lower in the picture space, and a somewhat more distant viewpoint would afford a better perspective, but these are comparatively minor matters in relation to the adverse effect of the setting and overbright costume.

Local Treatment.

It scarcely seems practicable to endeavour to change the character of the background now that the negative is made, although it could be blocked out and another substituted. Such a device, however, requires a good measure of experience before it can be successfully attempted, but it should be relatively easy to lower the tone of the dress by shading the rest of the picture during the printing exposure.

The effect would be not only to soften the assertiveness of that patch of light, but the features—which are the main reason for the photograph—would be thrown into greater prominence. The whole thing, too, would show a greater harmony of tone and its standard would be appreciably raised.

An opposite impression is conveyed by No. 2, "My Missus," by F. N. Bailey, for, on account of the depth of tone in the background, the features are unduly accentuated. The contrast between the two tones is too great and the result is discord. Here, it would be better if the tone of the setting were raised. It would bring the tonal values more into harmony without any loss of dominance on the part of the head, but, in the rendering of the features themselves, there is a further drawback arising from the lack of modelling. This appears to be attributable to the fact that the lighting is too frontal and too diffused, or, possibly, its source is at too great a distance.

The London Shows.

Its direction should be more definite and more to one side or the other, so that one side of the face is brighter than the other. As in the former case, pose and expression are quite good, but it would be instructive if a visit were paid to the London exhibitions, which are now open, with the idea of finding out how these things are managed; to see how the masters of photography deal with their subjects; and to try and work out methods of obtaining a like or even a better standard.

It is not suggested that any example should be imitated, but rather that an endeavour be made to analyse how the effects are secured, and to utilise such of the methods as are applicable to attain an end that is appropriate for the sort of thing it is desired to do. There are portraits and figure studies of very many different types, and it would not be impossible to find a subject of the nature of No. 3, "Dancers," by Arthur Harrop, but it would scarcely include so many figures, and what there were would be more effectually isolated.

It is far easier to make up a decent composition with a smaller number of figures, and it is not wise, in a subject of this character, to allow any portion of the legs and feet to be cut off.

Scale and Subject.

Inevitably, these considerations mean that what figures are included should be shown on a smaller scale and taken the vertical way.

The same considerations apply in the case of No. 4, "Muriel," by H. Oldroyd, as far as the scale of the head is concerned, for it is too large for the picture space and the viewpoint is too near. The scale creates the impression that the head is restricted, and the proximity of the viewpoint involves something in the nature of an exaggerated perspective, the size of the ear appearing too big in comparison with the other features.

Moreover, if it were the intention to show the profile, the sitter has been allowed to turn her head too much away from the camera, so that, instead of the full profile, only a portion is visible.

No. 5, "Long Journey," by L. A. Hill, is better managed, and perhaps it would not do to be too critical about the choice of setting, seeing that, in the circumstances, nothing else would be available.

The background is better contrived in the case of No. 6, "Portrait," by J. Naysmith, and the tonal harmony attains quite an excellent standard, but the distance does not seem too well judged, for the far shoulder is better defined than the face and hair, and the nearer arm is noticeably out of focus.

Still, the head is better isolated than in the majority of the others, and the profile in No. 7, "Making Friends," by W. H. Phillips, although shown against a somewhat confused setting, compares favourably with No. 4. It was a mistake, however, to permit the cage to become so prominent, and, were it placed a good bit farther off, it would not compete so much with the figure, which, of course, should be the main interest. Nos. 8 and 9, "Outdoor," by C. W. H. Simcox, and "Mother and Daughter," by D. Gilchrist, deal quite cleverly with two figures, but, in each case, there is a measure of under-printing.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

MODIFYING PRINTS WITH OIL PIGMENT.

NOW that long autumn evenings are available for indoor photographic work I am going to give a few promised hints on what I consider a most fascinating occupation. It is not only interesting, but of the greatest value to those who wish to make the most of their prints.

If any reader does not consider Fig. 2 better than Fig. 1 he need not read any farther; nor should he if he thinks it a crime to "fake" a print. The modification shown in Fig. 2 has been made entirely by hand work on the print, but I do not believe that anyone examining the original would find anything that would "give it away." The print looks "straight."

In the issue of August 26th I described how to spot a print with water-colour, and how to "dope" it with one of the varnish-oil-turpentine mixtures. At that stage it may be finished, and require no further treatment. If so, all the better; the photographer has been lucky. But it is often the case that some modification of the tone values is desirable, and the print is ready for a treatment that will accomplish this.

Perhaps the simplest way will be for me to say exactly what I did with one of the eagle prints. Originally they were identical whole-plate enlargements on a matt white paper, developed with amidol. Fig. 1 is from the untouched print, the light tones of which are brighter than in the reproduction.

I treated Fig. 2 as follows: With lamp-black water-colour I touched out sundry light spots, including many on the bough on which the bird is perched, especially those near the edges of the print. I also ran a light wash of colour over the other two perches.

Then I rubbed into the whole surface a little of the dope given on August 26th.

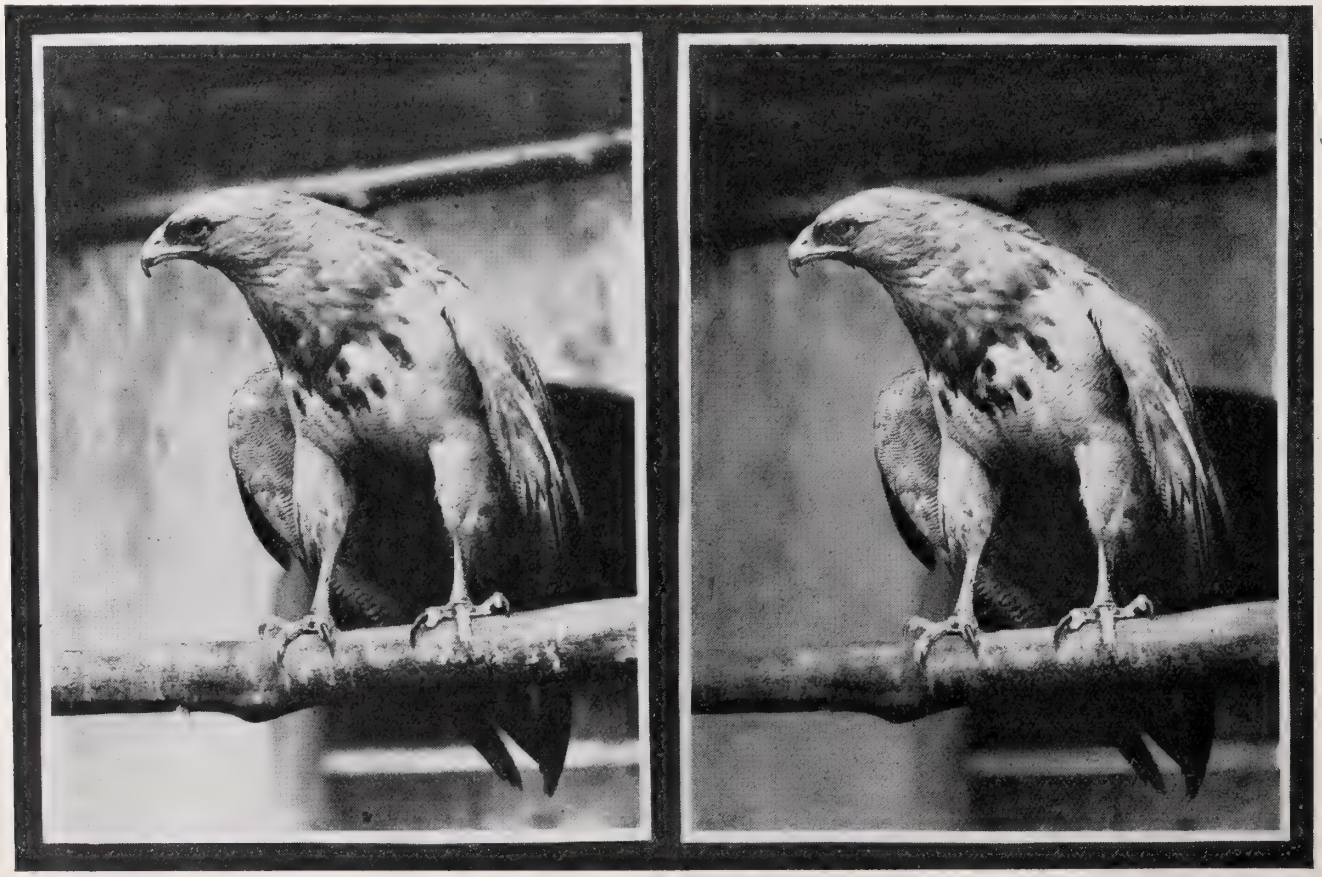

Fig. 1.

Fig. 2.

Ready to hand were the following: a piece of white opal for a palette (glass will do); a tube of lamp-black oil colour; the bottle of dope, a small bottle of turpentine; a small sable brush (No. 2, kept for this purpose); some cotton-wool; a small palette knife; and a piece of blotting paper.

On the palette I squeezed out some paint, about as large as a pea, and a few drops of dope. With the knife I worked these together, dabbed a wad of wool on the mixture, and rubbed it quickly over the print, missing the main mass of the bird's body. By degrees a smooth grey tint can be obtained, which can be lightened with clean wool, darkened with more pigment, and smoothed and coaxed into the right depths of tone.

To the depth of tone there are limits. It is not like painting black on with a brush; only a certain amount of colour can be rubbed into the surface, but this should be all that is necessary. If the original print has not got proper depths of tone already this treatment is not going to supply them.

Fig. 3.

My next procedure was one to which I resorted long ago, but which I find is little known and seldom practised. We are told to clear away the pigment where it is not wanted by means of clean wool, wrapped round pointed wood for the small high-lights, and used in wads for larger areas.

Try this, and you will find it works very imperfectly. No amount of wool will clear the pigment right out of the paper, and wool on a stick will not follow sharp outlines such as the beak and claws of the bird.

So, as usual, I took my sable brush and applied a trace of turpentine to the beak, and at once blotted it off—pigment and all. In little bits I similarly removed the colour from the claws, the high-lights on the perch, and then, with bolder treatment, from the main body of the eagle. Turpentine runs and spreads quickly, so it must be applied sparingly and with care.

Both prints had white margins, and those of the one treated were covered with pigment. I defy anyone to clear a sharp edge by rubbing with wool, on a stick or off. I laid a piece of paper on the print, with a clean-cut edge flush with the margin, dabbed a trace or two of turpentine on the smudgy margin, and rubbed along the edge of the paper with clean wool. As will be seen, the margins are clean and clear-cut.

Fig. 3 had practically a repetition of the treatment given to the eagle. I chose it because the sky and its reflection were practically white. Over these parts pigment was rubbed, and cleared off the high-lights as before. The whole operation took perhaps ten minutes.

W. L. F. W.

TONE ELIMINATION

By STUART BLACK.

PHOTOGRAPHY is the medium beyond all others for depicting the tones and textures, lights and shades of objects. As a purist I want to see all these things rendered in all their subtlety and beauty; yet, after all, who is wholly consistent? Therefore, as an experimentalist, I have often wondered whether some special effects could not be obtained by concentration on masses and the partial or even total elimination of half-tones.

The reproductions on the next page show the sort of results one can get by absolutely straightforward photographic methods, and with no other chemicals than a standard developer and fixing bath.

The process, however, is not adapted to any and every subject, but in any case it must have been taken in sunlight, or there will be no excuse for the extreme shadows and high-lights that are the essential feature.

Now to get down to technicalities: "Cement," of which a print direct from the original negative is also shown, was taken at the famous Mousehole quarry at about three o'clock in September. The negative is on Kodak Super Pan quarter-plate film-pack stock and had 1/25th second with a K 2 filter. It was taken with a soft-focus lens at about f/6. The negative is distinctly on the soft side, as it was somewhat over-exposed and under-developed.

"Española" was taken in a garden on an Ilford Golden Iso Zenith plate with a telephoto lens at f/5.6 and a K 1 filter, exposure about 1/25th, and this also is a very soft negative.

The material used for the intermediate stages was Ilford (photo-mechanical) stripping film. The original negative was put into a *condenser* enlarger, to get as much contrast as possible, and, for the sake of convenience in keeping everything the same size, and for economy, the enlarger was set to give "same size" prints.

A trial exposure was made by the strip-covering method, and the test

developed as far as it would go. I used a standard M.Q. developer and developed for at least four minutes. It is well to inspect the trial, when it is fixed, in a bright light. It should be very contrasty and not very thin, but with as few veiled high-lights as are consistent with good contrast and "body." When the best exposure has been found, the actual print is made, and forced, if anything, even further in the developer.

The film is on a paper backing, and looks just like a sheet of bromide paper, but it curls very badly in the wash-water and should have a deep dish to wash in. In every other way it can be treated like ordinary bromide, but with care, as there is a tendency to frill.

The positive is put aside to dry, being hung up by clips and not laid down on muslin, and no heat should be applied. As soon as it is dry the paper backing can be stripped off with a careful, steady pull.

Española.

Cement.

The positive is again put into the condenser enlarger, and exactly the same process repeated, again developing to the utmost limits the film will stand. The resulting negative should have practically no half-tones at all.

The printing gives one a choice of one or two more increases of contrast if they are needed. In the specimens with this article none was needed, and the same paper was used for contact prints from the final negative as had been used for the enlargement from the original. If, however, more contrast is required the negative can be put through the enlarger again, and/or the prints can be made on a more contrasty grade of paper, as there are now so many available.

Do not try to make enlargements, at any rate above whole-plate. They are very disappointing. The best results seem to be quarter-plate prints on a sheet of whole-plate, which give the effect of lino-cuts, but are absolutely straight photography.

In conclusion, it is an amusing variation which can give very pleasing results of an unusual kind, and, moreover, it is one in which the purist can soothe his seared conscience by muttering "after all, it's pure photography throughout."

GOLDFISH. By Shiasuka Izumi.

(From the London Salon of Photography, now open at the Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London.)

HOLIDAY. By Robert Bagby.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

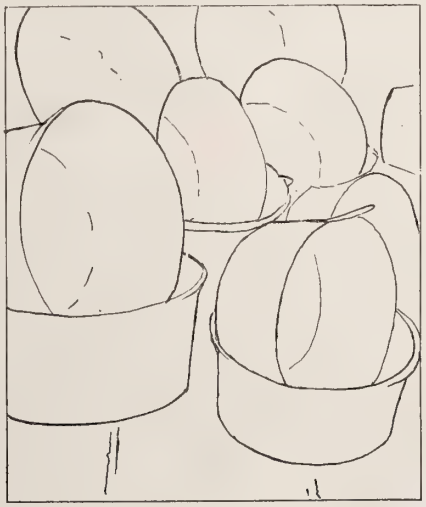
Pictorial Analysis

Notes on the Pictures reproduced on the Art pages in this issue.

OUR illustrations this week are drawn from the two principal exhibitions of the year—that of the London Salon of Photography, at 5a, Pall Mall East, S.W.1, and that of the Royal Photographic Society, at 35, Russell Square, London, W.C.1—both of which are now open and remain so until the 10th October next.

Those who are in London, or those who are able to get there, should make a point of visiting both shows and of inspecting the originals for themselves, but, for those who are unable to do so, this selection of reproductions, and those that will appear in future issues, will enable some idea of the quality of the work to be gathered. In the figure studies at the Salon, **"High Jinks,"** by **Paul Shillabeer,** was conspicuous not only on account of its fine portrayal of the figures of an adult and child in poses instinct with the joy of life, but also by reason of its admirable suggestion of sunshine and the open air.

There is a vivacity and a vividness that are most arresting, and much of its undoubted charm has its origin in the choice of just the right moment for making the exposure—through which the attractiveness of pose and expression have been secured—and in the contrasts and harmonies of the tonal scheme. The sunlit portions of the bodies of the figures derive a considerable degree of brilliance on account of their contrast both with the darker sky beyond and the yet deeper adjacent shadows. But, while these lights



are appreciably lighter than any part of the sky, there is not, as might be thought, any loss of luminosity. On the contrary, the impression is very well conveyed. It owes its existence, in the first place, to the suggestion of gradation in the sky itself, the tone, in general, becoming darker as it ascends and being topped by the much greater depth of the blue, and, in the second, to the contrast afforded by the darks of the figures against its lighter passages.

Stability is assured by the choice of the base-line for the feet of the adult, and while, perhaps, it might be made a little more emphatic by the addition of a fraction along the bottom, it is not a matter of much moment and does not affect the appeal of the work as a whole.

Incidentally, it may be mentioned that the print is a glossy bromide and forms an example of an increasing tendency at the present time to make use of this class of paper for exhibition work. Naturally, it demands—on account of its proneness to reveal every defect and every little detail—an exceptional measure of technical efficiency, but, this being assumed, it lends a brilliance that cannot be approached by any other means.

Another subject in which the same medium has been employed is **"Shower Bath,"** by **Dr. Tibor de Csörgeo.** It, too, is of a remarkable brilliance, but it shows the fine shape of the model's limbs, as well as their texture, to perfection. It is certainly a very fine print, and its richness and quality is a joy to behold.

The subject is interesting, also, in that it forms an example of a diagonal form of composition, of which the trunk and near leg provide the main line. It is

strengthened by the opposition of the crossing lines of the other leg, and by the curving lines of the masonry behind. It is well designed and illustrates the modern tendency towards the utilisation of pattern—arising from the disposition of line in repetition—in developing a sense of order in the arrangement.

It is highly finished and complete, and in the selection of the subject material it is unique. It betrays a decided originality in conception; is characterised by a pronounced individuality; and displays an artistic imagination of a high order.

Dr. E. G. Boon, who sends from Italy, is represented by a fine series of still-life subjects, of which, **"At the Fair: Copper Saucepans,"** is typical.

It admirably shows his well-known capacity for making the most of the slightest of subject material; his peculiar facility for reducing it to order and creating a highly decorative pattern from purely fortuitous placing in the subject matter itself; and his ability to suggest that idea of exactitude of placing that has hitherto been regarded as almost an exclusive property of the Japanese.

As to his methods, he tells us all about them elsewhere in this issue, and to his remarks the reader is referred. A further instance of the employment of pattern as a compositional aid is to be seen in **"Wings Over the Sea,"** by **G. L. Hawkins,** where it arises, in the main, from the placing of the birds in an irregular sequence, and, in a measure, from the radial formation occasioned by the presence of the rays of light from the partially obscured sun.

The picture is remarkable for its highly attractive impression of luminosity and the exceptionally fortunate way in which the birds in flight have been caught. The quality and superb finish of the print

is really outstanding. Blacks of great depth are contrasted with lights of brilliance and purity, and, though the work is strong it is wholly in harmony. Its quality, too, is enhanced by its impressiveness of size—the original is 23×18 in.—and, it is interesting to learn, it was produced by enlargement from a portion only of a negative 2¼ in. square, taken with a Super Ikonta miniature camera, the exposure being 1/200th of a second at f/5.6! Not only is it a wonderful example of speed work—the judgment exercised in choosing the moment for making the exposure was most precisely calculated—but it is also a tribute to the capacity and power made available by modern developments in camera construction.

The fine grain of the film is a further help, and the print itself is made on one of the most attractive of modern papers—"Gevaluxe"—which responds, most

effectively, to the demands of the pictorialist. But the print is one that should certainly be seen in the original. The reproduction does, it is true, give a good idea of the subject, its treatment, its arrangement, and the beauty of its effect, but its impressiveness of scale and its gorgeous quality can only be assessed from an inspection of the print itself.

The group of card players in **"Giocatori,"** by **Dr. M. Roccavilla,** is well chosen and is an example that comes from the pictorial section of the Royal Photo-

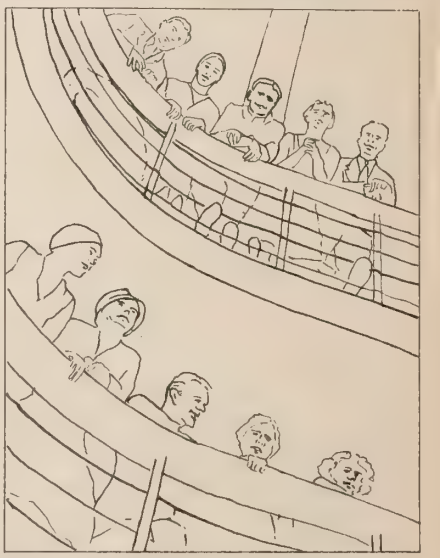
graphic Society's show. It is chiefly notable for its arrangement, the figures assuming a pyramidal formation, and its achievement under what appears to be poor lighting conditions.

The grouping is very natural; the expressions on the various faces are faithfully recorded; and there is an entire freedom from camera-consciousness. This is remarkable having regard to the circumstances under which the photograph was taken, and does much towards lending it a special interest. It forms a good example in the "genre" class, but, while the heads within the pyramid—see the dotted lines of the sketch —make up exceptionally well, the somewhat out-of-focus head on the left and the two figures on the right, which fall outside the triangle, do seem unessential intrusions which the picture would be better without.

However, the difficulties associated with this sort of work are immense and it is creditable to have secured such a result at all. These little drawbacks may, therefore, be passed over with the hope that fortune will be more kindly disposed on another occasion.

"Goldfish," by **Shiasuka Izumi,** is another still life of considerable charm, but, in this instance, the work is really Japanese in origin. It is characterised by a delicacy of key and a delightful feeling of daintiness, while the limitation of subject material and its precision in placing fully accord with the oriental tradition.

Essentially, there is but the bowl, the fan, and the setting, though, perhaps, the goldfish might be said to form additional elements. As they are shown, however, they rather appear as embellishments of the bowl and not as separate items. The point is not very material, for, viewed from the Western stand point, the bowl (1) is unquestionably the principal object and the fan (2) its subsidiary. The centre of the bowl falls almost exactly on one of the intersections formed by vertical and horizontal divisions of thirds, any one of which provides a strong placing, and its dominance is thereby assured.



Its proximity, too, gives it a further ascendancy over the fan, which, also having regard to its relative weakness of position, naturally is relegated to a secondary place. The soft tone of the setting rounds off the scheme and completes an excellent arrangement. There is, however, a feeling of decorative design which is occasioned by the circular formation of the bowl and the partial imitation afforded by the edge of the fan, which considerably enhances the composition and confers the modern touch. It is beautifully constructed, and no less attractive is the excellence of its technique, for, within its designedly restricted range, the tones are pure and full of quality.

A more extreme example of the modern school is **"Holiday,"** by **Robert Bagby,** where the line of sight represents a decided departure from the normal level, the camera being directed upwards at an acute angle.

The consequent raising of the vanishing point introduces an unfamiliar perspective, which, when viewed vertically in the usual way, does not seem altogether right, but, if the print be placed above the head and the head tilted backwards, an effect approximating that seen by the camera becomes manifest and the foreshortened and sloping figures and inclined verticals seem to fall into their proper place. The subject then seems to acquire normality—at least, to some extent—but retains a certain novelty and freshness of outlook because of the way it is being, and requires to be, viewed.

If, immediately afterwards, the print be placed on the wall and viewed in the ordinary way, most of the unfamiliarity passes away and the novelty persists. It seems to show an ordinary scene in an extraordinary way, and, as it is very well done, it gets away with it and gets it across. Moreover, it is not without a feeling for pattern, and it does exhibit a fine effect of sunshine. Technically, again, it is irreproachable, and, for once in a way, it might be considered acceptable.

It is, however, the sort of thing that cannot be repeated without creating an impression of being

overdone, nor, being in the nature of a "stunt," can it hope for acceptance by eventual incorporation in the normal standards of arrangement in the way that was done with design and pattern.

Nevertheless, it has a place in a show that is intended to represent all possible phases of pictorial photography of the present day, both new and old, and, in any case, there is plenty to admire and much that will prove a source of inspiration, whichever school claims our adherence, at the London Salon of Photography.

"MENTOR."

Autumn Tints in Colour

A note for the user of the new colour films.

AT the present time of the year, when many photographers are using the new Dufaycolor and other colour films, there may be many exposures made upon the gloriously tinted foliage of autumn. There is no doubt that these subjects are ideal for colour photography, but there are one or two important points to note.

The beginner at colour photography is naturally attracted by the wide vistas of varied colouring, which seem to provide perfect subjects. This is not the case; far more effective colour pictures will be made over comparatively small areas.

The best subjects for colour photography are those where a few brilliant colours stand out in vivid contrast against others, such as the dark greens of firs. It is not enough to reproduce one colour; several are necessary.

The colour film, as is well known, having a rather smaller margin of latitude than that allowed by ordinary plates and films, those subjects having great lighting contrasts should be avoided. The contrasty subject fails not so much by reason of limitations in the technique of the medium, but because the deeper shadows show very little colour.

On the other hand there are cases where one or two colours stand out vividly against a darker background. The latter may be ignored, and the fact that the background is in shadow will assist in making for the brilliancy of the colours which form the subject.

The lighting, and its effect on colour, is very important. The best results will be obtained when the lighting is soft in character. This gives brilliancy of colour without the strong contrasts that the colour photographer should avoid. The lighting conditions can make or mar a subject. Some of the best effects will be secured, both with regard to brilliancy and accuracy of various colours, when the sun is shining through light clouds.

The best time of the day is the early morning or late afternoon. The lighting conditions are softer, there is less shadow in the case of open subjects, through the lower position of the sun, and the colour rendering is better than under the most brilliant sunshine conditions.

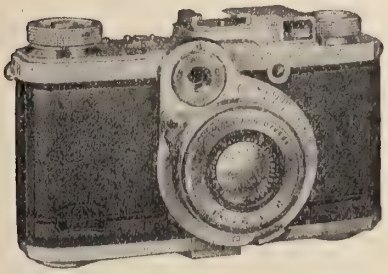
Wind is a troublesome factor that the autumn colour worker has to contend with, but early and late in the day this is often less troublesome.

The new colour films are very successful with the rendering of cloud forms, which can be such an attractive feature of the landscape at this season. Provided that the subject is not too contrasty, which may entail the loss of the sky through the longer exposure required for the shadow, it is possible to render the sky and cloud forms very convincingly. Golden foliage, green grass, with a blue sky, make a combination that the colour worker will find it hard to resist.

The autumn colour worker should be very careful with regard to the exposure, and the only safe course is to use an exposure meter, as the lighting conditions are so deceptive that it is easy for a photographer of experience to go wrong. If in doubt, it is safe to give a little more exposure, as it is possible to remedy the effect of the latter during processing.

A tripod will be necessary for most subjects, because, while the modern films are faster than the colour materials of a few years ago, exposures will run into a second or more.

The colour worker should be warned against making exposures upon very dull days, as it is then almost impossible to secure brilliancy of colouring, no matter how long the exposure. It must be realised that brilliancy of colouring depends in no small measure upon good lighting conditions, and this should be noted by all who would avoid disappointment.



R. M. F.

"WHAT IS A SPECIALIST?"

Peculiar interpretations of the word "Specialist" have led us in the past to call for dictionaries, wondering if we might possibly be labouring under a misconception regarding the meaning of that very simple term. The dictionary confirmed our previous belief that one could not be a specialist without limiting one's activities to a particular purpose or function. This forced us to come to the conclusion that once again the English language was suffering violence for commercial ends.

It still seems that a "Specialist," if necessary and convenient, can be one who does not specialise in anything. Our own claim to this title is, we believe, legitimate. Three years ago we decided to devote our attentions exclusively to miniature photography in all its branches. No apparatus other than miniature cameras and their accessories, miniature enlargers, projectors, etc., is to be seen at our showroom. We have an efficient repair service for miniature apparatus, and are the only firm undertaking exclusively the processing of miniature films and enlarging from miniature negatives. It was to be expected that time would produce imitators. This, in itself, we take as a tribute to our success, and we trust that we shall not be considered immodest in claiming that we remain unique—the only miniature camera specialists.

EVERY MINIATURE CAMERA OF DISTINCTION AND EVERY ACCESSORY IS KEPT IN STOCK.

THE NETTAX. Zeiss new miniature camera for 24×36 mm. negatives, with removable back and interchangeable lenses. Prices, with f/3.5 Tessar, £29 5 0; with f/2.8 Tessar, £32 0 0.

THE PLATE BACK EXAKTA. The miniature camera with the widest range of speeds. Prices, with f/3.5 Tessar, £26 10 0; with f/2.8 Tessar, £30 10 0

THE CONTAX MODEL III. The leader of miniature camera design, with built-in exposure meter. Prices, with f/2.8 Tessar, £55 17 0; with f/2 Sonnar, £63 0 0; with f/1.5 Sonnar, £78 5 0.

THE KORELLE REFLEX. Medium-priced miniature reflex taking telephoto lenses. Prices, with f/3.5 Victar, £10 10 0; with f/3.5 Tessar, £17 17 0; with f/2.8 Tessar, £19 19 0.

IMPORTANT TO LEICA USERS.

The new Leitz trigger quick-winder attachment, for which we are now taking orders, is on demonstration at our showroom. The quick-winder is essential for Press, sports and theatre photography—in fact, for all quick-action work.

PROCESSING of MINIATURE FILMS.

For miniature negatives, specialist processing is absolutely essential. We are the only firm in the country exclusively undertaking this kind of work, and years of experience in miniature technique enable us to produce flawless and virtually grainless negatives. We undertake two services: Standard Fine-grain Development, for which the ordinary charge of 1s. 6d. per spool is made, and Paraphenylene Diamine Development, for which we charge 5s. 6d. for a Leica size spool. The latter service is positively the finest that at the present stage of miniature photographic technique it is possible to obtain. Extreme precautions are taken to produce superlative results and each film is finally treated in "TEITEL" SCRATCH-PROOF SOLUTION, rendering it practically impervious to subsequent damage. Write to us for full particulars.

WITH EACH OF THE SECOND-HAND CAMERAS LISTED BELOW WE GIVE A WRITTEN GUARANTEE OF OPTICAL AND MECHANICAL PERFECTION.

LEICAS:

Leica Model III, chromium, f/2 Summar lens, ever-ready case. As new.....£31 15 0
Leica Model III, chromium, f/3.5 Elmar, ever-ready case. As new.....£24 17 6
Leica Model III, black, f/3.5 Elmar lens, ever-ready case. As new.....£23 15 0
Leica Model II, black, f/2.5 Hektor lens, ever-ready case. As new.....£21 10 0
Leica Model II, chromium, f/3.5 Elmar, ever-ready case. As new.....£20 10 0
Leica Model II, black, f/3.5 Elmar. Practically new condition.....£19 10 0
Leica Model I, f/2.5 Hektor lens, non-interchangeable. Good condition.....£11 11 0

CONTAXES:

Contax Model II, f/2 Sonnar lens, ever-ready case. As new.....£39 10 0
Contax Model II, f/2.8 Tessar lens, ever-ready case. As new.....£34 10 0
Contax Model I, latest wedge-type range-finder, f/2 lens.....£32 17 6
Contax Model I, wedge-type range-finder, f/2.8 Tessar, ever-ready case. As new.....£24 10 0

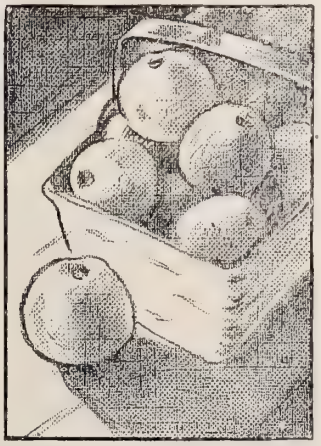
Picture Points

No. 18 (New Series) *by RICARDO*



Grouping in Still Life.

AN ever-popular subject for still-life studies, fruit, which is seasonable and in great variety at this time of the year, also affords very good exercise in composition. Possibly, the greatest danger when arranging a fruit study is to employ too many different varieties when, similar to the point on leaves on the right of this page, it is far better for beginners to concentrate on one type only.

The top sketch, which, no doubt, many readers will recognise as being in common with their first efforts, shows how confusing a mixed group can be. If a basket is chosen as a receptacle, care must be taken that it should not be given too much attention and prominence. Because this subject has been portrayed so many times a change of viewpoint is a welcome relief, and a high angle view, as shown in the second sketch, is but one suggestion.

When there are many similar shapes to be shown try and arrange the lighting or focussing or placing so that one of the objects is given priority over the others, like that in front of the basket in the second sketch. This will provide the main point of interest for the picture.

Singularity in Design.

THERE is no doubt that we can make very attractive pictures of such a simple subject as leaves.

During the past few years there have been many presentations, all differing with regard to lay-out, lighting and viewpoint, but there are still various ways of presenting the subject that is worth the attention of all photographers. Both indoors and out, on the ground and in the air, against the light and with the light, there is sufficient variation to make many attractive pictures.

There are many points to consider when dealing with this subject, and one of the major faults made is that of including too many different points of interest, of which the sketch at the top is typical. Although it is possible to make an attractive study of these various items, the leaves as well as the house-tops and sky, the beginner is strongly advised to concentrate on one decorative theme like that in the lower sketch. There is a singularity of purpose here that makes the most of the pattern of the leaves and, consequently, it is very strong and virile.

Although it is easier to pick out a small cluster as this, it still requires individual attention to the arrangement of each leaf. Notice how one spray of leaves is given greater prominence than the rest by way of tone contrast and placing, while all the others are subordinate and yet supporting and contributing to the general design. One big advantage with this type of subject is that should the natural grouping on the tree or bush be unsuitable, the sprigs can be detached from the tree and regrouped indoors as a still-life study.

Another Aspect of Variations.

HARVEST-TIME subjects will, no doubt, be popular with photographers during the next few weeks, and a word on this subject will be of interest. The illustration on the left is based on a typical beginner's print, and leaves much to be desired in composition. The regularity of spacing is too monotonous, the tops of the sheaves just tipping the skyline is bad design, the lack of contrast between the sheaves and surroundings is insufficient, the skyline is half-way, and there is no strong point of interest.

The sketch on the right is a suggestion how such a subject can be tackled. A much lower viewpoint for the camera will cause the stacks to rise high above the skyline, a change of position to the left will give us more variation in the size of the stacks and a closer viewpoint to allow the sheaf shown on the right to give strength and support to the complete picture. There are two ways of getting contrast in the tones, and the first is by making use of the sunshine if present. A strong side lighting to give sufficient tone contrast, similar to that shown, will convey the right type of atmosphere at the right time. The other method is dependent on the colour of the sky. If it is blue, we can take advantage of a colour filter, preferably a deep yellow, which will not only record the sky as a dark grey, but will make the corn to appear cleaner and whiter than is usually shown in straightforward prints. If, however, neither the sun nor sky be suitable, we must rest content with the contour of the sheaves against the sky affording an interesting pattern.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS

An instructive leaflet, "Lantern Slides in Colour by the Dufaycolor Process" has just been issued by Ilford Ltd. It contains a lot of useful information for those workers who are trying this attractive colour process, and a copy will be sent free on application to Ilford Ltd., Ilford, London, E.

A new camera and ciné club has been formed at Poole (Dorset). At a meeting in a studio in the town, the chair was taken by Engineer-Captain E. J. Mowlam, and Captain Graham Yeatman was elected Hon. Secretary; Mr. J. Thomas, Hon. Treasurer; and a Committee was elected. They were instructed to draw up rules, etc., for submission to another general meeting. All amateur photographers in the neighbourhood who are interested should communicate with Mr. W. S. Stickley, 115, Ensbury Park Road, Bournemouth.

Stereoscopic enthusiasts will find in Dr. J. Moir Dalzell's new book on "Practical Stereoscopic Photography" a literal storehouse of information. Every aspect of the subject is fully covered from both the technical and the æsthetic point of view in such a highly interesting and instructive manner that even the veriest novice in photography could not fail to understand it and follow it throughout. The principle of this fascinating subject is explored from the medical as well as from the technical point of view in the first chapter, and, similar to all the following seventeen chapters from apparatus to processing and from printing to ciné work, it is very thorough and practical. It is a remarkable fact that there is not a single illustration, photograph or diagram in the book, but as one reads, it is felt that they are not needed, so well are the various items and methods described. While it is a complete manual on stereoscopy, much of the text deals with photography that will interest the single-lens camera user, particularly from the "miniature" point of view.

This book should do much to revive the popularity that this fascinating branch of photography so richly deserves. Published by The Technical Press, Ltd., 5, Ave Maria Lane, London, E.C.4. 10s. 6d. net.

Readers who are contemplating renewing their ciné screens for the coming winter season will be interested in the new collapsible screens just placed on the market by the Camera Company of 320, Vauxhall Bridge Road, London, S.W.1. One is a silver screen type, selling at 17s. 6d. each, and the other a glass-beaded screen of a very light cream colour, selling at 32s. 6d. each, each complete in a stout cardboard box. Both screens allow a full 40×30 in. picture to be shown, and are of the collapsible roll-up type with rigid side stretchers. The stretchers are designed so that it is only necessary to slacken the thumbscrews for erecting or dismantling purposes. Slots are also provided to allow maximum tension for a perfectly flat surface throughout. The fabric screens are both of good quality and finish. The woodwork is substantial and finished in black eggshell cellulose throughout. On test, the screens were quickly erected and gave good flat, taut surfaces. The surface finish of each is very good and showed excellent results.

A new photographic club has just been formed in Lanark, and readers who are interested are invited to write to the Hon. Secretary, Mr. E. P. Prentice, "Mavisbank," Newlands Street, Lanark.

We have just received the winter syllabus for the Hampshire House Photographic Society of Hammersmith. Between September of this year and April of next the society has planned no fewer than forty-one lectures and demonstrations and twelve exhibitions, besides the various outings and meetings of the special groups within the society, such as the Bromoil Group, Portrait Group, and the recently organised Miniature Camera Group, which is proving so popular. Those who are not members of any camera club are always welcome to the Thursday evening meetings at Hampshire House (Hog Lane, Hammersmith), when they can see for themselves the working of an up-to-date photographic society.

If any reader is offered the following camera or can supply any information regarding it, will he kindly communicate immediately with this paper: Rolleiflex Camera No. 376799, Lens No. 1653315.

The winner of last week's Wallace Heaton Competition is Mr. F. S. Moore, 60, Arlington Road, Leeds, 8. Particulars of this competition for "A.P." readers will be found in our advertisement pages.

An error occurred in our issue of September 9th, in announcing Mr. C. C. Stewart as the Hon. Secretary of the newly-formed Clapton Miniature Camera Club. The Secretary is Mr. L. J. Heaverman.

At the Battersea Men's Institute Camera Club a new dark-room has been installed complete with enlarger and washing facilities. A separate studio fitted with electric lighting can also be used by members. The session, which begins on September 30th, will include popular demonstrations and lectures. Full particulars from the Club Secretary, Mr. A. E. Lunn, 57, Killyon Road, Wandsworth Road, London, S.W.8.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, September 23rd.

Birkenhead P.A. Annual General Meeting.
Blackpool and Fylde P.S. "Mains Hall." Mr. Smith.

ONE CUSTOMER—ONE EXPERT ATTENDANT

LEICA MANUAL

The finest book ever published on Leica Photography. Nearly twenty authors, each a specialist. 500 pages, 300 illustrations, covering everything connected with Leica photography. 21/-, post 6d. Get yours now.

While it is generally accepted that the average big store lacks the advantage of individual attention, we are definitely the exception to that rule. Every customer who enters our store for a miniature camera or accessories gets the immediate attention of an expert who knows and uses every miniature model. Moreover, it must not be overlooked that the big store is able to carry the best range of cameras and accessories. We have over 500 Leica accessories actually in stock, including such late additions as the Telyt lens, the Thambar—the 28-mm. extra wide-angle lens, the Distortion Correction Device for Enlarging, etc., as well as every accessory for Contax, Rolleiflex, and every miniature camera. We offer special facilities which cannot be obtained from any other "miniature dealer."

Gevaert GEVALUXE VELOURS

The most beautiful paper ever produced

The unique and striking velvet texture paper which gives life and beauty to all types of subject. Not only for the special pictures for the Autumn Exhibitions but equally for all landscape, architecture, portrait and interior work.

Prints on Gevaluxe have a depth of tonal beauty not obtainable by any other process, and a startling life-like quality of almost stereoscopic effect.

As simple to use as an ordinary bromide paper, as suitable for contact as for enlarging work, and ideal for enlargements from the very smallest of miniature negatives. *

* *[With all 35-mm. miniature cameras use the Gevaert Cartridge. Supplied in four varieties.]*

GEVAERT LTD., WALMER ROAD, LONDON, W.10

Gevaert "PERFECT PICTURES"

For Miniature Camera Negatives
"PRAXIDOS"
VERTICAL ENLARGERS

Praxidos Automatic Enlargers give critically sharp enlargements, the degree of enlargement being determined by raising or lowering the lamphouse—the image is always needle-sharp. By varying the illumination, enlargements of different degrees of contrast can be obtained. Enlargements can be made from any selected part of the negative of any size up to the capacity of the enlarger. Single or double condensers supplied as required.

AUTOMATIC FOCUSSING "PRAXIDOS"

PRICES:

No. 502 Automatic Praxidos, with 5.5-cm. f/3.5 anastigmat lens, with iris diaphragm, for 4×4 cm. (1½×1½ in.) or smaller negatives, for 2 to 10 times enlargements..... **£17 10 0**

No. 498 Ditto, without lens, including condenser, for use with Leica lens, 5-cm. focus..... **£12 15 0**

No. 499 Ditto, without lens, including condenser, for use with Contax lens, 5-cm. focus **£13 10 0**

No. 506 Automatic Praxidos, with 7.5-cm. f/3.5 anastigmat lens, with iris diaphragm, for 6×6 cm. (2¼×2¼ in.) or smaller negatives, for 1½ to 7 times enlargements..... **£18 0 0**

No. 491 Automatic Praxidos, with 11.5-cm. f/3.5 anastigmat lens, with iris diaphragm, for 3½×2½ in. or smaller negatives, for 1½ to 7 times enlargements..... **£24 0 0**

HAND - FOCUSSING "PRAXIDOS"

This hand-focussing Praxidos Vertical Enlarger can be set for any degree of enlargement by releasing a lever. The lamphouse can be raised or lowered until the desired size of enlargement is obtained. Focussing is completed by means of the helical focussing mount of the lens. Single or double condensers supplied as required. Illumination is obtained from a 100-watt opal lamp. Please state voltage when ordering.

PRICES:

No. 453 Praxidos "O," with 6-cm. f/4.5 anastigmat lens, with iris diaphragm, for 4×4 cm. (1½×1½ in.) or smaller negatives, for 1½ to 8 times enlargements..... **£8 10 0**

No. 454 Praxidos "O," as above, without lens..... **£4 12 6**

No. 463 Praxidos "O," with 7.5-cm. f/4.5 anastigmat lens, with iris diaphragm, for 6×6 cm. (2¼×2¼ in.) or smaller negatives, for 1½ to 6 times enlargements..... **£10 0 0**

No. 464 Praxidos "O," as above, without lens..... **£5 12 6**

No. 473 Praxidos "O," with 10.5-cm. f/4.5 anastigmat lens, with iris diaphragm, for 3½×2½ in. or smaller negatives, for 2 to 7 times enlargements..... **£15 15 0**

THE YEAR'S PHOTOGRAPHY

A fine selection of the prints and lantern slides from the Annual Exhibition. From your bookseller or the Publications Department of the Society, price **3s.** (cloth bound **5s. 9d.**), post free.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Developing "Film Sense"

By S. E. L. M.

MOST amateur cinematographers naturally desire to make good films, so they hit upon an appealing subject, write up a scenario, shoot the "takes," and enjoy a session of editing.

In some cases the effort is a solo one; in others, access may be had to more expert assistance. Nor need we stress the fact that a film made with such assistance will almost invariably turn out better than one made without it—albeit the amateur must forgo a great deal of personal satisfaction.

In these circumstances, it is customary for the beginner to go off and assist a group of more experienced workers before making a start on his first "real" film. This serves to teach him many things, though such training alone must not be regarded as sufficient. Something else is necessary—and that something is the development of "film sense," through the theoretical treatment of action.

Casual Work.

This work can be causally done in the train, during leisure intervals and during the evenings at home. No film whatever is required for its development—all the work being done with pen and paper.

To begin with, it is sufficient to jot down a few words indicating any simple piece of action—as "man walks down lane and meets friend," "child makes a purchase in tuck-shop," or "woman decides to visit dressmaker."

The real work now consists of translating these jottings into film details, of giving each item as many alternative "treatments" as possible. Details to elaborate are (1) the purpose of the action, (2) the distance of the shots, (3) the lighting, (4) any integral sounds, (5) the film footage, and (6) methods of changing from one shot to the next, e.g., cut, diffuse, fade, lap, mix or wipe.

At this stage it is possible for the beginner to classify his alternatives according to the manner in which they appeal to him. Then, and only then, should he take the notes along to his club or local expert and ask for considered opinions. Where the opinions are favourable, he should discover what makes them so; where they are unfavourable he should strive to find out his precise weakness.

Harder Work.

Film sense will begin to develop with proficiency in this simple task—after which the enthusiast may pass on to more difficult essays. Here, whole sequences may be attempted. The simple phrase will become an episode—as "man walks down street, meets friend and demonstrates to him the ingenuity of a wire puzzle he carries in his pocket"; "child spends last coppers in tuck-shop, then admires expensive toy—which is finally purchased and presented by indulging stranger," or "woman decides to call on dressmaker, is visited by slim, energetic friend and elects to try a course of exercises instead."

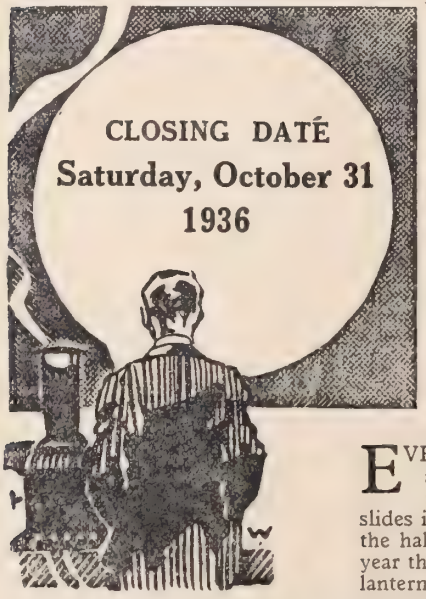
Obviously, the additional action embraced in these examples represents a larger number of alternative treatments. And—as many treatments mean greater confusion—steps must be taken to simplify the scheme.

One way of doing this is to limit the number of shots to five, six or seven—which alone will cut out many of the alternatives. Another way is to make use of tracking shots, pans and other devices of the moving camera, whilst yet another is to film the subject in abstract. Then, to simplify the scheme still further, it may be decided not to mingle two or more of these suggestions in any one treatment.

As in the case of the simpler essays, finished treatments should be submitted to an expert group or individual—after which the advancing amateur may care to try his skill on a complete synopsis with a familiar subject.

Other Notes.

In the plan outlined above, the method has been applied only to the scenario stage. It may, however, be utilised to much advantage in other branches of film-making.



To this end, the cameraman may ask an actor to stare impassively at an object placed immediately before him; then, without any sympathetic movement of the actor's features, angles and lighting should be arranged to suggest various emotions (as fear, gloom, hatred, joy, love, and rage).

Similarly, the construction and arrangement of sets, the various departments of make-up, etc., may be tried against theoretical alternatives.

At the Fishing Ports on the East Coast fine action pictures are obtainable at the present time. These can be welded together to make an effective "documentary" depicting "Fish"—from the time they are caught by the trawlers at sea, until they appear as an item of the menu. A familiar incident is shown in the above print.

The Amateur Photographer & Cinematographer

ANNUAL
Lantern-Slide Competition
1936

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in "The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in "The A.P." prize set which circulates throughout the British Isles can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that the awards are made to individual slides and not to sets; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of "A.P." Prize Slides should hasten to do so, and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Saturday, October 31st.

Classes and Subjects.

CLASS I.—Landscape with or without figures, sea subjects and river scenery.

CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.

CLASS III.—Architecture, interior and exterior.

CLASS IV.—Flowers, fruit and other "Still-Life" subjects.

CLASS V.—Natural History subjects.

CLASS VI.—Lantern slides in colour (not hand-coloured).

CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{4} \times 3\frac{1}{4}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not *accompanied* by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Saturday, October 31st. The slides must be well packed and addressed, "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

Exhibitions and Competitions

CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, September 30. Rules in issue of August 26.

The Amateur Photographer Novices' Competition. Prizes of Roll Films for Novices' Prints. Closing date, September 30. Rules in this issue.

The Amateur Photographer Special Competition, illustrating "Can the Camera Lie?" Entries close September 30.

Wallace Heaton "35-mm. Film Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

XVme Salon International de Photographie de Bruxelles.—Open, May–October. (M. Maurice Broquet, Secretaire du Salon, Rue du Sceptre, 77, Brussels.)

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

The Folkestone Camera Club, Competition for the best photographs of Folkestone.—Entries close, September 30. Cash prizes. (Ernst. F. Davidson, Hon. Secretary, Folkestone Camera Club, Town Hall, Folkestone.)

Chicago International Salon.—Open, July 23–October 4. (Alex. J. Krupy, Chicago C.C., 137, North Wabash Avenue, Chicago, Ill.)

XXXIe Salon International D'Arte Photographique de Paris.—Open, October 3–18. (M. E. Cousin, Secretaire de la Société Française de Photographique, 51, Rue de Clichy, Paris (9E).)

Tweede "Focus" Fotosalon.—Open. September 12–27. (Focus, Ltd., Fotosalon, Bloemendaal, The Netherlands.)

South African International Salon.—Open, October. (Hon. Secretary, Johannesburg P.S., P.O. Box 7024, Johannesburg, South Africa.)

Royal Photographic Society Annual Exhibition.—Open, September 12–October 10. (Secretary, R.P.S., 35, Russell Square, London, W.C.)

Buffalo C.C. Fourteenth Annual Salon of Photography.—Open, September 6–27. (H. W. Schonewolf, 528, Elmwood Avenue, Buffalo, N.Y., U.S.A.)

Fotoclub Zagreb, Fourth International Salon of Photography.—Open, October. (Fotoclub Zagreb, Masarykova II, Zagreb, Yugoslavia.)

London Salon of Photography.—Open, September 12–October 10. (Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.)

Brighouse Public Library, Museum and Art Gallery. Exhibition at the Smith Art Gallery.—Open, September 26–October 23. (Chas. W. Roberts, Public Library, Museum and Art Gallery, Brighouse, Yorks.)

Leica Competition. Cash prizes. Closing date, September 30th. (Messrs. E. Leitz, 20, Mortimer Street, London, W.1.)

Lincoln Camera Club.—Open, October 15–November 12. (Miss E. Redfern, 146, Burton Road, Lincoln.)

XII Salon International de Fotografica Zaragoza, Spain.—Open, October. (Secretary, Sociedad Fotografica de Zaragoza, Plaza de Sas, 7, Zaragoza, Spain.)

Third Canadian International Salon of Photographic Art.—Open, October 23–November 15. (Exhibition Secretary, Canadian International Salon of Photographic Art, National Gallery of Canada, Ottawa, Canada.)

Windlesham C.C.—Open, September 25–26. Classes for members (Beginners, Advanced, Professional, also Open Class). (J. C. Hayward, Hallgrove, Bagshot, Surrey.)

IV International Hungarian Exhibition.—Open, October 24–November 9. (Secretary, Magyar Amatörfényképezök, Orsz. Szövetsége, Budapest VII, Erzsébet-körut, 9, Hungary.)

Rotherham P.S. Forty-seventh Annual International Exhibition.—Open, October 14–17. (E. George Alderman, Ruardean, Newton Street, Rotherham.)

Service Co. (London), Ltd., Happy Camp Snaps Competition. Cash prizes.—Entries, September 30. (Service Co. (London), Ltd., 273, High Holborn, London, W.C.1.)

Coronet Midget Camera Competition. Cash prizes.—Entries, September 30. (Coronet Camera Co., 310, Summer Lane, Birmingham, 19.)

Eighth International Photographic Salon of Japan.—Entries close in Tokyo, September 30; open, November (Tokyo and Osaka). (Sec., International Photographir Salon, Tokyo, Asahi Shimbun, Tokyo, Japan.)

Photographic Society of America 100 Print Salon.—Entries, October 1. Limit 4 prints. Entry fee $1.00. (Dever Timmons, Salon Secretary, Box 216, Cashocton, Ohio.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Entries, October 1; open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

G.E.C. (Coventry) Third Annual Exhibition. Open classes for members of Midland Federation Clubs,—Entries, October 14; open, November 9–14. (P. H. Crosby, Hon. Sec., G.E.C. Photographic Society, General Electric Co., Ltd., Coventry.)

Johnson's "Holiday" Competition. Cash prizes.—Closing date, October 31. (Johnson & Sons, Ltd., Hendon, N.W.4.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Entries, November 1; open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.) Entry forms obtainable also from the Editor of *The Amateur Photographer*.

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Entries, November 15. open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaest; 69, Antwerp.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5⅛×3⅛×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

35.

CARBRO

BY this process a carbon print is made from a bromide without the aid of daylight. The bromide print or enlargement, which has been thoroughly washed and dried, is placed in water until limp. Carbon pigment tissue of the selected colour and a quarter of an inch larger each way than the bromide print is sensitised in the following bath:

Stock Solution No. 1.

Potassium bichromate	1 oz.	(25 grm.)
Potassium ferricyanide	1 oz.	(25 grm.)
Potassium bromide	1 oz.	(25 grm.)
Water	20 oz.	(500 c.c.)

Stock Solution No. 2.

Glacial acetic acid	1 oz.	(10 c.c.)
Hydrochloric acid (pure)	1 oz.	(10 c.c.)
Formaldehyde, 40 per cent	22 oz.	(220 c.c.)
Water	1½ oz.	(15 c.c.)

From these stock solutions the working baths are made up as follows:

Working Bath No. 1 (A).

No. 1 stock solution	6 oz.	(100 c.c.)
Water	18 oz.	(300 c.c.)

Working Bath No. 2 (B).

No. 2 stock solution	1 oz.	(10 c.c.)
Water	32 oz.	(320 c.c.)

Immerse the pigment tissue in "A" solution for three minutes and, after draining, immerse it into "B" solution for 10 to 20 seconds, according to contrast and density required.

Meanwhile take out the bromide and place face upwards on a sheet of glass. When the pigment tissue has been in "B" solution for correct time, remove it and squeegee it on to the bromide print, taking care to avoid shifting when once in contact.

The bromide and pigment paper are removed from the glass, allowed to remain for 15 minutes between two sheets of waxed paper and then separated. A sheet of transfer paper slightly larger than the pigment paper, after 5 minutes' soak in cold water, is placed on glass and the pigment paper is squeegeed on to it and left for 20 to 40 minutes.

In a dish of warm water, 100° F., the pigment and transfer paper are allowed to soak until the pigment oozes out at the edges, when the pigment paper is gently detached. The transfer paper is then developed by splashing with the warm water until the image is clear of superfluous pigment. Rinse in cold water and place into 3 per cent solution of potash alum for 15 minutes. Rinse in cold water and dry.

The original bromide after well washing may be redeveloped for making further carbro prints.

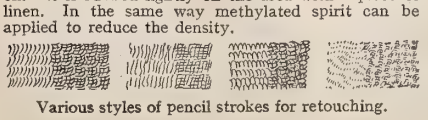
36.

RETOUCHING THE NEGATIVE

SMALL pinholes in the negative are best filled in by spotting them with a very fine pen charged with indian ink. Tones, however, can only be altered by reducing (Facts and Formulæ No. 7) and by retouching the emulsion.

The easiest method of adding density to a tone is by the use of a hard pencil after the area concerned has been covered with a retouching medium. This medium is best obtained commercially, but can be made up as follows:

Gum dammar	10 grs.
Canada balsam	5 grs.
Turpentine	1 oz.



Apply the medium sparingly on a piece of linen stretched over the ball of the finger. When dry, it is ready for the pencil. Use a 3H pencil and sharpen it to a long slender point.

The density should be obtained with a series of fine stipple dots, strokes, or "commas," as illustrated below.

Neo-coccin, a red dye, can also be used to give printing density to the negative. It is diluted and painted over the area with a brush. To remove, soak the negative in plain water.

For darkening the tones on the print the corresponding area of the negative must be lightened by a chemical reducer (No. 7) or by a physical reducer such as Baskett's or methylated spirit, or by a sharp retouching knife.

Baskett's reducer is made by mixing 2 oz. of Globe metal polish with 2 oz. of terebene and 2 oz. of olive oil. It is rubbed lightly on the area with a piece of linen. In the same way methylated spirit can be applied to reduce the density.

Various styles of pencil strokes for retouching.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Subscription Rates: United Kingdom 17/4, Canada 17/4, Other Countries 19/6 per ann. post free from the publishers, Dorset House, Stamford Street, London, S.E.1. Telephone: Waterloo 3333. Telegrams: Amaphot, Sedist, London.

Developing Roll Films.

Is there any other method of processing roll films that is not so tiring as the "see-saw" method or as expensive as the tank method?

L. M. G. (Bournemouth.)

In the "Hints and Tips" page of this issue there is a method and apparatus described that develops, fixes and washes a roll film by fixing it to a drum and revolving it in a dish of the necessary solution. There is another very simple and convenient method that is not so popular as it might be and that is by using long, narrow dishes. These dishes are just the right length of the film, leaving sufficient at end of the film to be gripped by a spring clip. These clips are rested on the end of the dish, and the film, which lies flat along the bottom of the dish, can then be processed in a similar manner to a plate. Quite a small quantity of solution can be used if the dish is continually rocked, and there is no necessity to touch the emulsion in any way as the film is handled by the clips at each end. Zeiss Ikon Ltd. is one firm which manufactures these long dishes. Some workers prefer to develop the roll film for a short time, just long enough to see the divisions between the negatives, and then cut it into separate portions and develop, fix and wash each separately.

Uneven Definition.

I have an old enlarger fitted with an f/4 lens, but it does not give sharp definition on the edges of big enlargements, but is quite all right for quarter-plate and smaller sizes. What is the cause—the lens, the condenser, or the lamp?

J. J. (Oldham.)

Undoubtedly the lens is the cause, since the lamp and condenser are responsible only for the evenness and intensity of illumination, and have nothing to do with definition. The lens is probably of the old "portrait" type, which was designed to give a large aperture to compensate for the slow plates in use twenty and more years ago. Its big drawback is that it has a curved "field," instead of a flat "field," as with modern lenses, and this will explain why your enlargements are sharper in the middle than at the edges. The only remedy is to focus on the bromide so that the detail is sharpest between the centre and the edges and stop down the lens sufficiently so that the detail is sharp all over the paper.

Defect in Negatives.

What is the cause of the series of light dots on the enclosed negatives developed in a Kodak tank?

A. D. E. (London.)

The trouble with your negatives is almost certainly due to the film being wound slack in the apron, so that the emulsion side was in contact with the small protuberances on the apron. As we have frequently pointed out, when winding the film into the apron you should keep a check on the free handle so as to keep the apron tight. This will prevent similar markings re-occurring.

Cleaning Dishes and Measures.

What is the best cleaner to use for removing stain from porcelain dishes and glass measures?

B. C. D. (Hastings.)

Pour a quantity of hydrochloric acid into an equal quantity of water and use this in the dish or measure with a small dish mop. It can be used repeatedly until it becomes exhausted. If this is not strong enough, an alternative solvent can be made up as follows:

Water	20 oz.
Sulphuric acid	2 oz.
Potassium bichromate ..	2 oz.

This can also be used repeatedly until it is exhausted. Whichever solution is used be sure to wash the dishes, etc., thoroughly in plain water afterwards.

Tap Water for Solutions.

What is the objection to ordinary tap water being used for making up solutions? B. H. (Hull.)

If the solution is not intended for immediate use then distilled or boiled water is to be preferred to water straight from the tap. Tap water frequently contains impurities which are responsible for solutions deteriorating.

Silhouette Photography.

I understand that the correct procedure for making silhouette portraits is to place the sitter in front of the white sheet and the light behind the sheet. If this is so, is it better to use several lamps or to use only one lamp?

A. G. A. (Birmingham.)

For a sharp outline to the portrait it is undoubtedly better to put the sitter between the white sheet and camera and the light the other side of the sheet. If the sitter is placed on the other side of the sheet, together with the light, no matter how close the head may be to the fabric there is bound to be a slight softening of the contour. There is no advantage to be gained in using more than one lamp as the illuminant; in fact, it would again tend to soften the contour, and since it is usual to have the silhouette a dense black, the question of ample exposure does not enter into it. We would suggest that one bright lamp be placed in line with the head one or two feet away, and all that is required, as far as the exposure is concerned, is to get sufficient illumination on the white sheet to provide a correspondingly dense background on the negative.

Scratches on Film.

What is the cause of the lines across the enclosed film negative? How can I remove them?

M. A. (Torquay.)

The scratches on your film are apparently abrasion marks due to the film being dragged over a rough surface, and this can occur in or out of the camera. Such marks are very often caused by winding on the film when the camera is closed, so that the bellows are in contact with the emulsion; but in that case they are generally much more serious than in the example you send. When once the scratches are made in the emulsion there is no way of removing them and the usual thing to do is to retouch the print carefully. Such scratches are not so prominent when enlarged in a diffusion enlarger as they are in the condenser type.

Curled Negatives.

Can you tell me how to prevent film negatives from curling?

D. A. (Birmingham.)

All roll films have a tendency to curl, in spite of the gelatine coating on the plain side to counteract the "pull" of the light-sensitive emulsion, and, as far as we know, there is nothing that will prevent this. You do not say how you keep your negatives, but if they are put in envelopes in the usual way they will not curl unduly. A temporary remedy is to breathe on the emulsion side, the concave side, for a few seconds, when the film will straighten out sufficiently long to place into position in the printing frame or enlarger carrier.

DUNSCOMBE'S CAMERA COLUMN

'SERVICE SUPREME'

NOW PASTE THIS IN YOUR ALBUM

ABOUT PROCESSING

We take great pride and care in all classes of DEVELOPING, PRINTING and ENLARGING, as well as special photographic work which is either too difficult or too much bother for other folks to do.

If you require anything out of the ordinary in the way of that maligned term "photo finishing," just let us know and we will quote by return giving fullest information.

We do NOT advocate a rush service as it is not possible to achieve the best possible results, but prefer to take our own time and do the job properly WITHOUT EXTRA CHARGE to the usual standard prices.

Extensive alterations to our plant and new equipment recently installed for high-class work by fully-trained staff.

MINIATURE PROCESSING

of all types of film emulsions (including Dufay-Leica colour films), using the finest chemicals and most suitable formula. Contact printing on continuous perforated paper. Positive film printing for projection. Contact or enlarged Lantern Slides in black-and-white or tinted finish. Enlargements from $3\frac{1}{2} \times 2\frac{1}{2}$ to 22×16 in.

GENERAL PHOTOGRAPHIC WORK.

Copying and Reproduction Negatives by contact, reduction or enlargement. Lantern Slides from large or small negatives or prints.

Black-and-white or Toned Enlargements of all sizes supplied on any grade of Kodak or Agfa papers of customer's own choice—again without extra charge.

Originals, Negatives, Prints, Legal Documents, Drawings, Maps, etc., and all classes of private photographic work treated with absolute confidence and despatched by registered post.

Prints or Enlargements dry-mounted on mounts or in customer's own albums, and titled if desired. LARGE SELECTION of loose-leaf and bound ALBUMS at popular prices from pence to pounds.

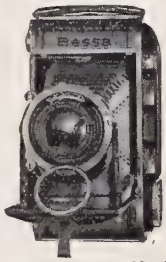
"SERVICE" WAFER

FOLDING PLATE $3\frac{1}{2} \times 2\frac{1}{2}$

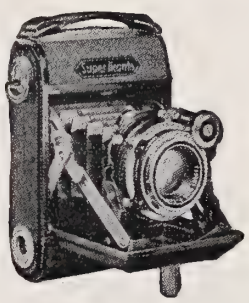


With f/3.5 Meyer Trioplan, delayed Compur shutter, 1 to 1/250th sec., T. and B., rise and cross front, double extension, brilliant and direct-vision view-finders, hooded focussing screen, 3 slides. Cash **£6:12:6**
Or 12 payments of 11/8 per month.
F.P.A. .....8s. 6d.
Roll-film Adapter 17s. 6d.
Slides .....2s. 3d.
Leather Case, best quality ....12s. 6d.

RANGE-FINDER BESSA

FOR 8-EXP. OR 16-EXP. ON $3\frac{1}{4} \times 2\frac{1}{4}$.

The range-finder control moves the entire front with the lens and shutter along the baseboard instead of only separating the lens elements. The trigger shutter release is only 1 in. away from the range-finder control, thus the exposure can be made immediately after focussing.



PRICES:

Model S1. Range-finder Bessa with 3-element Helomar f/3.5 lens, Compur Rapid shutter..... **£16 10 0**
Or 12 equal payments per month of £1 8 10.

Model S2. Ditto, with 4-element Skopar f/3.5 lens..... **£18 15 0**
Or 12 equal payments per month of £1 12 9.

Model S3. Ditto, with 5-element Heliar f/3.5 lens..... **£21 0 0**
Or 12 equal payments per month of £1 16 8.

Special velvet-lined Tan Leather Case, with lock and key, shoulder sling, etc. .....12s. 6d.

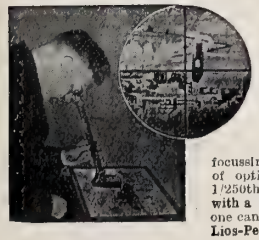
POST US YOUR NEXT OR TRIAL ORDER

☛ For Christmas we have introduced an entirely new and original idea in **ROYAL CHRISTMAS GREETING CARDS** at **6d.** each. These cards are sure to appeal and will be appreciated by amateur photographers on the look out for something good and original.

Send a negative, any size up to ½-plate, and 7½d. stamps for specimen. You will be agreeably surprised.

COVERDALES
19, PARLIAMENT STREET, YORK

"VERTEX" 1936 Models



The most comprehensive range of **Photographic Enlargers.**

MECHANICALLY IMPROVED PERFECTED LENSES

Specially designed for enlarging from miniature negatives. Spacious well-ventilated lamphouse to prevent over-heating. Single type condenser (the best for minimising grain). **THE ACME OF SIMPLICITY:** one-hand manipulation by means of automatic column-lock, and focussing on lens mount. Fitted with red swing-filter for rapid work. Anyone can easily master its operation in **a few minutes.**

Models Nos. 204 to 209 make enlargements up to 12×12 in. Prices from £6 6 0 to £8 8 0.
Models Nos. 216 to 219 make enlargements up to 16×16 in. Prices from £7 7 0 to £10 10 0.

STOP GROPING IN THE DARK

Use the **LIOS-Periscope** when making enlargements. With this unique high-grade precision instrument you are able to examine in detail your negative (through the image projected on baseboard) and to determine needle-sharp focussing. Sold with a guarantee of optical accuracy to within 1/250th inch. **No more fiddling with a magnifying glass.** Anyone can use the Lios-Periscope. Price £4:4:0

LIOS-GRANDOSCOPE

Correct time of exposure for making enlargements definitely and simply determined.

Price 37/6

ULTRASORBAN Colour Filters

for cloud effects and correct rendering of tone values, Optical flats, stained during fusion (no gelatine), yellow, green, red and blue, single or in sets of three, screw-cap slip-on metal rims for all lens diameters.

LIOS-SCOPE Exposure Meter.....15/-
"FRAMEX" Range-finder, with interacting area of sharpness gauge. Price 32/6. Leather case 2/6 extra.

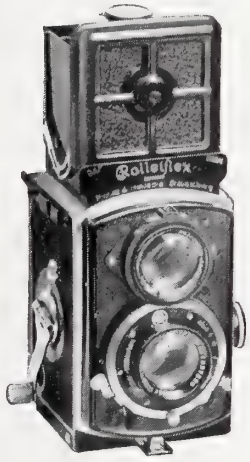
Leica Cameras Wanted

FOR SPOT CASH



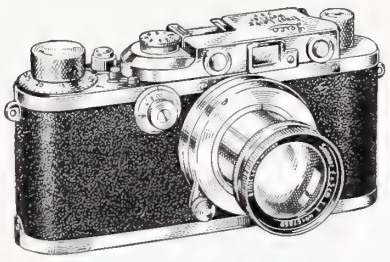
Leica lenses and accessories wanted for spot cash.

Specially wanted. 9-cm. Elmar f/4 Lenses and (Vidom) Universal Finders for spot cash at 1, Copthall Chambers, E.C.2.

Let us make you an offer.

ALL THE BEST CAMERAS FOR AUTUMN

As usual, the finest selection is in stock at Bond Street. Any model can be purchased on nine equal monthly instalments, and you can start using your camera after making the first small payment. Why not write to us, or, better still, call at our shop and let us show you the various models, there is absolutely no obligation to purchase.



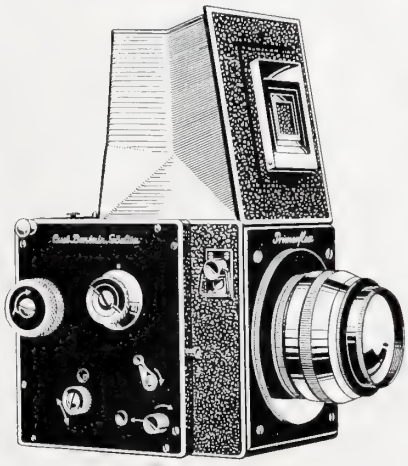
WHEN IN TOWN FOR THE "ROYAL" OR THE "SALON," DON'T MISS OUR MINIATURE CAMERA PICTURE EXHIBITION IN OUR NEW GALLERY AT 127, NEW BOND STREET. OPEN 8.30 A.M. TO 6.30 P.M., FREE.

ROLLEIFLEX

To be able to see your picture on the ground-glass screen, actual size and right way up, is but one of the advantages of the Rolleiflex. Lens stop, shutter speed and focussing can all be seen and adjusted while the picture is being composed. Takes 12 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ 8-exposure roll film for 1/-, and may be adapted for plates or ciné film. Fitted with Zeiss Tessar f/3.5 lens and Compur shutter, speeded to 1/500th sec., T. and B..... **£25**

Nine monthly payments of 58/4.

ROLLEICORD II, RETINA, SUPER IKONTA, BRILLIANT, ETC. ALL IN STOCK.



LEICA MODEL IIIa

Every Leica shot is successful. You can take distant shots of animals or birds, close-ups, portraits, speed subjects, or snapshots at night. The Leica measures only $5\frac{1}{4}$ in. yet will take up to 36 pictures with one loading. Double or blank exposures impossible. Five minutes to learn—call and let us demonstrate. Generous allowances on your present apparatus. Literature free on request.

Leica Model IIIa, with f/2 Summar lens **£43 0 0**
Nine monthly payments of £5 0 4.

THE LATEST 'MINIATURE'

Now at Bond Street!

"PRIMARFLEX"

Takes 12 pictures $2\frac{1}{4} \times 2\frac{1}{4}$ in. on standard $3\frac{1}{4} \times 2\frac{1}{4}$ roll films; also $4\frac{1}{2} \times 6$ cm. plates.

These special features are incorporated in this splendid new model. One revolution of winding-head automatically and simultaneously performs four functions—i.e., winds shutter, sets mirror, operates film counter, winds film. Self-capping focal-plane shutter, 1 to 1/1,000th sec., T. and B., deep focussing hood with magnifier, additional direct-vision finder, interchangeable lens mount.

With 10-cm. f/2.8 Meyer Trioplan anastigmat **£31 10 0**
Nine monthly payments of 73/6.

With Zeiss Tessar f/3.5 lens, in helical mount..... **£36 10 0**
Nine monthly payments of 85/2.

Plate-holders, each..... **7s. 6d.**

Prices of interchangeable lenses on request.

A SUPERB PICTURE

by

SELOchrome

FILM PACK

No more conclusive proof of the photographic efficiency of Selochrome Film Packs could be provided than this fine photograph by W. L. F. Wastell, Hon. F.R.P.S.

It leaves nothing to be desired in richness of detail and tone gradation.

Remember the six big advantages of Selochrome Film Pack — No fogging. Every film lies flat. All tabs are of different lengths. No sticking or slipping. Any film can be removed for development before the whole of the pack is exposed. Correct register with *all* adapters.

Made in England by **ILFORD LIMITED, ILFORD, LONDON**

Printed in England for the Publishers, Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1, by The Classic Colour Press, Reading.

The AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

3D

~ The Journal for Everybody with a Camera ~

Vol. LXXXII. Wednesday, September 30th, 1936. No. 2499.

it would be a stroke of luck to get a picture of such rare beauty as this with an ordinary camera—but with a Rolleiflex *nothing* is left to chance. It is so scientifically constructed that, with good judgment and an eye for the unusual, it is possible for every exposure to be a real work of art. The shutter speed and lens stop can be seen from the taking position in a small peep window above the finder lens, while at the same time, your picture is in view, full size and right way up, on the focussing screen. Every control is placed within easy reach of the finger tips—thus manipulation becomes simplicity itself. Rolleiflex has Compur shutter speeded to 1/500th sec., T. and B., and f/3.5 Zeiss Tessar lens. It takes twelve pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ 8-exposure film for 1/-, or can be used with plates, 35-mm. ciné film, or as a stereo camera, and takes numerous special accessories making it really versatile. **£25.**

EASY TERMS AND EXCHANGES.—Anything on nine monthly payments—our exchanges are the fairest obtainable anywhere.

"MICROLUX" DEVELOPING SERVICE

Our "MICROLUX" Service of developing in Paraphenylene-Diamine and other agents ensures the best results from your film; results which have so minute a grain size that they will enlarge twenty diameters or more without the grain becoming apparent, but owing to the nature of this development it is essential that films for "MICROLUX" development receive at least twice the normal exposure. Providing this extra exposure is given, negatives developed by our "MICROLUX" process possess a quality that cannot be equalled by ordinary methods, but to submit a film which has received merely the bare minimum exposure to this form of development will not yield good results. The latter we can also develop under the same "INDIVIDUAL" conditions, but in this case the results are not of such microscopic grain size. We offer this service, confident in the belief that it will meet the requirements of those careful workers who would always do their own processing had they the convenience.

"MICROLUX" and "INDIVIDUAL" Development Prices:

Leica, Contax and similar films: For 36 exposures, 4s. 6d.; per 12 or 18 exposures, 3s. 6d. All other 6, 8, 12 or 16 exposure films (up to 3¼×2¼ size): Per film, 3s. 6d.

Note.—When sending films for this special treatment it is more than usually necessary to advise us as to the make and type of film used.

A RECENT TESTIMONIAL

Sidmouth.
5th September, 1936.

"I shall be showing you later the amazing improvement in grain since using your developer. I have two pictures here of identical grain—the one from your developer is 20× enlargement and the one from the other developer is 8× enlargement." G. G.

GUARANTEED SECOND-HANDS

WALLACE HEATON'S

OPEN COMPETITION

FOR GOOD PHOTOGRAPHY BY ANY AMATEUR WITH ANY APPARATUS

NO RESTRICTION WHATEVER AS TO SUBJECT, ETC.

£25 FIRST PRIZE

21/- WEEKLY PRIZE

Here's a new competition in which the beginner stands as much chance as the experienced photographer. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement, as always looking best in the eyes of the judges. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25 which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment.

Acceptance of the rules is a specific condition of entry.

NO RETOUCHING, FAKING, OR COMBINATION PRINTING—JUST HONEST PHOTOGRAPHY. NO RESTRICTION AS TO SIZE AND TYPE OF CAMERA, OR MATERIALS USED.

COUPON *which must be affixed to the back of each entry.*

6×6 Rolleicord, f/4.5 Triotar, L/case £9 7 6

Three New Salex All-way Enlarging Easels. Cost £3 3s. each. Each..... 45s. 0d.

Latest Leitz Focomat Enlarger, condenser, base easel, electric fittings. As new £13 17 6

Leitz Valoy Vertical Enlarger, condenser, base easel, electric fittings..... £7 17 6

3¼×2½ Miraphot Enlarger, f/4.5 Tessar, special iris ring, electric fittings, base easel. As new. Cost £12..... £7 17 6

¼-pl. Ensign Enlarger, long ex., f/6 Aldis anastigmat, 5¼-in. condenser, electric fittings £4 17 6

V.P. Piccolette Roll Film, f/4.5 Zeiss Tessar, Compur, L/case..... £5 5 0

Specially Good Enlargers, in various sizes and types. Details on application.

3¼×2½ Ensign Roll Film Reflex, f/4.5 Aldis anas., L/case £4 17 6

4½×6 Tropical Sennett, f/4.5 Zeiss Tessar, Compound shutter, 3 slides, F.P.A., 2 purses £4 17 6

Exakta Reflex Vest Pocket, f/3.5 Zeiss Tessar, L/case £14 14 0

Model P.A. Bolex Projector, 400-watt lamp, f/1.9 lens, resistance..... £19 19 0

3¼×2½ Latest Range-finder Makina, f/2.9 Plaubel Anticomar, wide-angle and other lenses, filter, hood, 3 slides, L/case. Cost £53 ..... £39 10 0

3¼×2½ T.-P. Horizontal Reflex, f/4.5 Dallmeyer anas., also 9-in. f/6.5 Dallon Telephoto, 3 slides, F.P.A. and case..... £9 9 0

45×107 Voigtlander Stereoreflectorscope, pair f/4.5 Heliar lenses, Compound shutter, changing-box, F.P.A., stereoscopic viewer.... £8 8 0

3½×2½ Super Ikonta, f/4.5 Tessar, Rapid Compur, L/case £14 10 0

Siemens Model B Cine Camera, f/2.8 Glaukar lens, slow motion, varied speeds.... £17 10 0

Model I Ikoflex, f/4.5 Novar lens, Rapid Compur. As new..... £8 7 6

3½×2½ Zeiss Maximar, f/4.5 Tessar, D.A. Compur, 6 slides, roll-holder, F.P.A., L/case £8 17 6

3¼×2½ Welta Perfecta, f/3.8 Meyer Trioplan, D.A. Compur, L/case £14 14 0

3¼×2½ Murer Compact Reflex, f/4.5 anas., 3 slides, F.P.A., L/case..... £3 17 6

Model I Leitz Leica, f/3.5 Elmar, range-finder, L/case £9 17 6

Several Good Microscopes by eminent makers at bargain prices. Write for particulars.

2¼×2¼ Super Ikonta, f/2.8 Zeiss Tessar lens, D.A. Compur, ever-ready case £25 0 0

3×4 Baby Ikonta, f/3.5 Novar anas., Compur, purse £5 17 6

3½×2½ Latest Voigtlander Bergheil, tropical finish, f/4.5 Heliar lens, D.A. Compur, 6 slides, F.P.A., L/case. As new..... £14 14 0

Leitz Valoy Enlarger, electric fittings. New condition £7 10 0

3¼×2½ Salex Reflex, f/3.9 anastigmat, focal-plane shutter, 6 slides, F.P.A., leather case £2 10 0

2½ square Voigtlander Brilliant, f/6.3 anastigmat, speeded shutter and ever-ready case £3 5 0

3¼×2½ Six-20 Kodak, f/4.5 Kodak anastigmat, D.A. Compur shutter and leather case £6 0 0

16-mm. Siemens Cine Camera, f/2.8 anastigmat, 3 speeds, leather case. New condition £24 0 0

Ensign Midget, f/6.3 anastigmat, speeded shutter..... £1 18 6

3½×2½ N. & G. Folding Reflex, Ross Xpres f/4.5, focal-plane shutter, revolving back, 2 slides, F.P.A. and leather case.... £19 19 0

16-mm. Bell & Howell 750-watt Projector, motor drive, resistance to 250 volts, in case £45 0 0

Ensign Multilite Outfit, 3 lamps, reflectors and stand, complete in case..... £3 18 6

Model IIIa Leitz Leica, Summar f/2, focal-plane shutter, coupled range-finder, ever-ready case..... £33 15 0

2½ square Rolleicord, Carl Zeiss Triotar f/4.5, Compur shutter. New condition.. £9 0 0

¼-pl. Latest Sanderson Hand and Stand, Ross Homocentric f/6.3, Compur shutter, every movement, revolving back, 6 slides, leather case. New condition £12 17 6

¼-pl. T.-P. Imperial Horizontal Enlarger, Aldis f/4.5, reversible carrier, 5¼-in. condenser. Nice order £6 19 6

12-in. Dallmeyer Popular Telephoto f/6, iris £5 19 6

6×4½ cm. Baby Sibyl, Carl Zeiss Tessar f/4.5, 6 slides, F.P.A. and leather case £6 17 6

3¼×2½ Super Ikonta, Carl Zeiss Tessar f/4.5, coupled range-finder. New condition £13 17 6

Zeiss Ikon Contax, f/2.8 Tessar, coupled range-finder, ever-ready case. New condition £23 15 0

¼-pl. Ensign Reflex, Ross Xpres f/4.5, focal-plane shutter, reversing back, 12 slides, F.P. adapter and leather case..... £9 17 6

3¼×2½ Dallmeyer Speed, Pentac f/2.9, focal-plane shutter, 1 slide, F.P.A. and leather case £11 12 6

¼-pl. Ensign Magnaprint, f/6.3 anastigmat, 5¼-in. condenser, electric fittings. New condition £7 17 6

3¼×2½ Ensign Vertical Magnaprint Enlarger, f/6.3 anastigmat, electric fittings. New condition £7 10 0

Exakt Vertical Enlarger, f/4.5 anastigmat, electric fittings, semi-automatic... £11 17 6

3½×2½ T.-P. Vertical Enlarger, Dallmeyer f/4.5, negative carrier, condenser and electric fittings. New condition £6 17 6

3½×2½ Voigtlander Prominent, Heliar f/4.5, Compur shutter, coupled range-finder and leather case £13 17 6

6×4½ cm. V.P. Ermanox, Ernostar f/1.8, focal-plane shutter, 6 slides, F.P.A. and case £16 10 0

250-watt 16-mm. Ensign Super Projector, motor drive, resistance to 250 volts. Nice order £19 19 0

100-watt Ampro Projector, motor drive, with still and reverse movements, resistance to 250 volts £9 17 6

4×3 cm. Baldi Roll Film, f/4.5 anastig. lens, Vario speeded shutter, direct-vision finder. Unsoiled..... £3 7 6

4×3 cm. Ensign Midget, f/6.3 anastig. lens £1 19 6

Kodak Retina, f/3.5 Xenar lens, Rapid Compur shutter. As new..... £8 15 0

¼-pl. T.-P. Press Focal-plane, f/3.5 Dalmac anastig. lens, 3 slides and case.... £12 10 0

Model II Leica, f/3.5 Elmar..... £19 10 0

Voigtlander Brilliant, f/7.7..... £1 12 6

6×6 Voigtlander Brilliant, f/6.3 anastig. lens £2 5 0

3¼×2½ Ensign Selfix, f/4.5 anastig. lens, speeded shutter £2 5 0

3¼×2½ Salex Supreme, f/4.5 Meyer Trioplan £2 7 6

V.P. Ihagee Roll Film and Plate Camera, f/4.5 Tessar, Compur shutter, plate back, 3 slides and screen..... £6 17 6

3½×2½ Kodak, f/4.5 anastig. lens, D.A. shutter. New condition..... £4 12 6

1a Icarette Roll Film, f/4.5 Tessar, in Compur shutter £6 10 0

¼-pl. Cameo, f/4.5 Zeiss Tessar, Compur shutter £6 6 0

3½×2½ Zodel D.E., f/6.8 anastig. lens, 3 slides £2 7 6

¼-pl. N. & G. Sibyl, f/4.5 Zeiss Tessar, 6 slides £6 17 6

3½×2½ New Special Sibyl, f/4.5 Dallmeyer Serrac, 6 double book-form slides, leather case £10 10 0

¼-pl. N. & G. Boxform Magazine, Wray lens, changing-box.....15s. 9d.

5×4 S.C. Goerz Anschutz Focal-plane, f/4.5 Ross Xpres, 6 D.D. slides and case £10 17 6

¼-pl. D.E. C.B. Field, f/8 Rectilinear lens, 1 double book-form dark slide and tripod £1 7 6

¼-pl. S.C. Goerz Anschutz Focal-plane, 7-in. f/4.5 Goerz Dogmar anastig. lens, 3 double plate-holders, leather case..... £10 17 6

¼-pl. T.-P. Reflex, f/4.5 Carl Zeiss anastig. lens, reversing back, 6 slides, F.P. adapter and case £6 17 6

¼-pl. T.-P. Horizontal Enlarger, f/5.8 Beck Isostigmar lens, 5¼-in. condenser.... £5 17 6

Zeiss 9×12 Miraphot Enlarger, f/4.5 Tessar lens. List price £14 10s..... £9 9 0

9×12 Plate and Film-pack Developing Tank ..... 17s. 6d.

2½ square Kodak Developing Tank..12s. 6d.

Smith and Beck Microscope, coarse and fine adjustment, ¼-in., 2/3rds, 4/10ths, 1½-in. objectives, 2 eyepieces, mechanical stage £5 17 6

Beck Microscope, coarse and fine adjustment, double nosepiece, 2/3rds, 1/6th objectives, 2 eyepieces and case..... £4 4 0

9.5 Enung 250-watt Projector, forward and reverse movement, sprocket drive.. £22 10 0

9.5 Pathe Projector, hand turn, added resistance. Cost £7 5s..... £3 17 6

9.5 Ray Projector, for use off house current ..... 17s. 9d.

V.P. Kodak Special, f/4.5 Tessar, Compur shutter..... £4 17 6

V.P. Blocknote, f/6.3 Tessar, 6 slides £1 7 6

Latest Model Cine-Kodak Special, fitted with 15-mm. f/2.7 Wide Angle, 1-in. f/1.9, 2-in. f/3.5, 3-in. f/4.5, 4½-in. f/4.5, 6-in. f/4.5, complete with range of filters, additional 100-ft. film chamber, additional 200-ft. studio film chamber, pan. and tilting tripod, range-finder, Weston exposure meter, presentation case. New condition. List £284 18s. 6d. A Salex super bargain £175 0 0

750-watt Kodascope Model K, as new, complete with resistance and case. List price £73 ..... £46 15 0

Latest Model S.P. Home Talkie Projector, 5-watt output, new condition, complete with speaker and all leads..... £47 10 0

Pathe Lux Projector, "S" lamp, fan cooling, automatic stills, automatic framing, complete with resistance and carrying-case. As new £11 15 0

Pathe Luxe Motocamera, f/3.5 lens, portrait attachment, filter and leather case. Nice condition. List £12 ..... £4 18 6

16-mm. Siemens Model B Cine Camera, f/2.8 anastigmat and leather case. As new. List price £31 10s. £20 15 0

16-mm. De Luxe Synchrophone Home Talkie Outfit, one unit, handsome walnut cabinet, comprising talkie, silent and sound, 10-valve all-wave radio and radiogram. List price £145. A Salex Super Bargain at.... £52 0 0

Permarec 10-watt Recording Amplifier. List price £60. As new. Perfect.. £25 15 0

Permarec Recording Turntable, complete with straight-line tracking device, volume indicator, leads and plugs, 33-1/3rd r.p.m. List price £45..... £21 0 0

Permarec de Luxe Recording Microphone, with 8-ft. adjustable microphone, beam arm, complete. List price £14 14s..... £5 15 0

Hyvoltstar Radiogram de Luxe, 10-valve super-het, 4-wave-band, neon tuning indicator, autochange, auditorial speaker, handsome walnut cabinet. List price £69 6s. £43 15 0

6×6 Voigtlander Brilliant Roll Film, f/4.5 Skopar anastigmat lens, Compur Rapid shutter, ever-ready case. New condition..... £5 2 6

3¼×2½ Voigtlander Bessa Roll Film, f/4.5 Skopar, delayed-action Compur shutter £6 17 6

4×4 cm. Rolleiflex, f/3.5 Zeiss Tessar anastigmat, complete in ever-ready case £13 10 0

3¼×2½ Nagel Roll Film, f/4.5 Zeiss Tessar anastigmat, delayed-action shutter £7 7 0

3¼×2½ Zeiss Tronar Folding Plate, f/3.5 Zeiss Tessar anastigmat, delayed-action Compur shutter, 6 slides, F.P. adapter, filter and leather case..... £14 14 0

¼-pl. T.-P. Imperial Enlarger, f/6.8 anastigmat lens, 5¼-in. condenser, electric fittings. £5 5 0

3¼×2½ Welta Camera, double extension, f/2.9 Schneider lens, Compur shutter, 6 slides, F.P. adapter and leather case..... £7 17 6

3½×2½ Ernemann Focal-plane, f/4.5 Zeiss Tessar, 3 D. slides and case..... £12 7 6

¼-pl. Zeiss Ikon Tronar, f/4.5 Tessar, Compur shutter, 6 slides and case..... £8 7 6

3½×2½ Miraphot Automatic Enlarger, f/6.3 Novar lens, bromide board, electric fittings £5 17 6

V.P. Agfa Speedex O Camera, f/3.9 lens, Compur shutter..... £3 18 6

¼-pl. Graflex Reflex, f/4.5 Cooke lens, 3 D. slides, F.P. adapter. New condition £9 17 6

EXCHANGE (1929) LTD.

The Camera that does the focussing with consistent accuracy

THE Super Ikonta is fitted with the Zeiss Ikon patent rotating wedge distance meter. The unique design of this distance meter—which is only obtainable in Zeiss Ikon cameras—permits a much greater accuracy in focussing than with the usual hinged mirror type of meter. And not only is the Zeiss Ikon rotating wedge meter more accurate, but also more durable and less susceptible to injury, because of the absence of moving pins and levers, which can, and usually do, go out of order.

SUPER IKONTA

The Super Ikonta is made in four picture sizes for roll films. All models are equipped with Zeiss lenses coupled to the rotating wedge distance meter, and in addition there are two special models available which provide the advantages usually found only in miniature cameras—the Super Ikonta II for $3\frac{1}{4}\times2\frac{1}{4}$ in. pictures is equipped with Zeiss Tessar f/3.5, Compur Rapid shutter, interlocking arrangement between film winder and shutter release that prevents unintentional double exposures.

For 16 pictures $2\frac{1}{4}\times1\frac{3}{4}$, with Zeiss Tessar f/3.5, Compur Rapid Shutter..£18 12 6
* For 8 pictures $3\frac{1}{4}\times2\frac{1}{4}$, with Zeiss Tessar f/3.8, Compur Rapid Shutter..£22 10 0
* For 8 pictures $4\frac{1}{4}\times2\frac{1}{2}$, with Zeiss Tessar f/4.5, Compur Rapid Shutter..£20 17 6
For 11 pictures $2\frac{1}{4}\times2\frac{1}{4}$, with Zeiss Tessar f/2.8, Compur Rapid Shutter..£28 5 0

SUPER IKONTA II

* For 8 pictures $3\frac{1}{4}\times2\frac{1}{4}$, with Zeiss Tessar f/3.8, Compur Rapid Shutter..£27 0 0

* Also gives 16 divided pictures by using mask.

Ask your local dealer to demonstrate the Super Ikonta.

Name of nearest stockist, together with the new Zeiss Ikon publication on the Super Ikonta, free on request.

VOL. LXXXII. No. 2499.

TOPICS of the Week

READERS are reminded of the approach of the winter season by the announcement, which appeared in last week's issue, of our annual Lantern Slide Competition. This is a recurring event that is looked forward to by all readers interested in the making of lantern slides. Not only are the entries in this competition always of a very high standard of merit, but the prize-winning set is usually regarded as containing the best slides of the year, which are appreciated as such wherever they are shown. Already, a month before the competition closes, applications for the prize set have been received from photographic societies in all quarters, and there are but few dates remaining vacant between the middle of November, when the set starts on its long tour throughout the country, and the end of May, 1937. Honorary secretaries of societies who still wish to secure these prize slides should send in their applications promptly, with as many alternative dates as possible. We will endeavour, if possible, to fit them in so that long journeys from society to society are avoided. Full particulars of the competition will be found on another page in this issue.

Putting Back the Clock.

On October 3rd most newspapers will contain some reference to British "Summer Time" ending on this date, and we shall be reminded to put back our watches and clocks one hour. There is still time for the free lance to illustrate the end of "summer time" for the local newspaper. During the first two or three years when British "Summer Time" was regarded as a novelty most newspapers illustrated the beginning and ending of the period by a photograph of a child moving the hands of a clock. Although a pleasing little reminder it has grown somewhat stereotyped. Here, then, is an opportunity for the photographer with an ingenious turn of mind to submit an unusual and attractive picture to the Press reminding readers to alter their clocks before retiring to rest on October 3rd. The subject is one which calls for originality, but it must not be overlooked that when submitting to the Press the picture must be perfectly sharp and clear. Aim at producing a fairly contrasty print for reproduction purposes and make enlargements on glossy paper.

AUTUMN IN THE WOODS.

Now is the time for panchromatic films and filters to render adequately the golden glory of the woodlands.

Professional Portraiture.

The second half of the P.P.A.'s Annual Exhibition at the Princes Galleries, Piccadilly, W., was opened on Saturday, September 19th, and again indicated the high status of British portrait photography by members of the Professional Photographers' Association. The show was both attractive and diversified, and visitors found it of considerable general interest. Over 600 prints were hung in these fine galleries, and special sections dealing with pictures of "hands" in portraiture and pictures of "The Nations' Workers" were included. The whole show was a very successful demonstration of a phase of photography with a great public appeal.

Sharp Shadows.

"Shadows for their own sake," to borrow the title of a recent article in these pages, are again exemplified in the current exhibitions, and it is borne home on us that the treatment of shadows is a task demanding something more than mere photographic technique. Shadows have

been defined as a partial substitute in a picture for the ability to move about and see the object from more than one point of view. Few things we depict can be so very attractive or so very repellent as sharp, uniform shadows, and whether they are attractive or repellent depends very much on the nature of the subject. Such shadows are seen at their best when the subject is one composed of angles and straight lines, or very simple elementary curves. But when, as in the case of most pictures, the "drawing" is of a much more complicated pattern the sharp shadow is apt to be very unpleasing; it needs toning down and very delicate treatment.

In Other Tongues.

The word "photography" is pretty much the same in most languages—"photographie" in French, "Fotografie" in German, "fotografia" in Spanish, and the same in Italian. But there are some languages where, through unfamiliarity, it seems to be much more picturesque. Welsh has three words which mean "photography," and though one's tongue may slip in pronouncing them, they do have something of the wind of the hills about them. They are "heuldebiaeth," "goldebiaeth," and "lleuferdebiaeth." To go rapidly to the other side of the globe, how pleasant sounding is "photography" in Japanese—it is "shashinjutsu." Even more engaging is the phrase in Persian "to take a photograph." It runs thus: "shíshah-i-áksandakhtan." One feels how clumsy is our own phraseology in comparison.

Multum in Parvo.

How much can be got into how little is illustrated (in woodcuts) in the Twentieth Century French Dictionary. Here, under the section headed "Photography," there are reproduced in a space measuring no more than ten inches by eight as many as forty-four separate pieces of apparatus—a studio camera, folding cameras for plates and for films, shutters of different kinds, stereoscopes, film pack, enlarging lantern, one, two, three, four, five kinds of dark-room lamps, and so on. English dictionary-makers are less prodigal in their illustrations and less ingenious in compressing them.

"Rush" Work.

In the race against time the photographer is always the leading runner. The fact was again brought home to us at a recent wedding in a West End church. On the way out the bridal party posed on the steps for a photographer who had his camera in the middle of the road. Groups of the departing guests were also snapped. The company adjourned to a near-by hotel for the reception, and were scarcely seated at the little tables when in rushed a number of girls with the prints, sheaves of them, awaiting orders, cash on delivery.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Enlarging from Contrasty Negative.

I wish to make an enlargement from a 36×24 mm. negative, fully exposed and over-developed, so that the high-lights are blocked up. I am told that reduction is undesirable. Is there any other method, e.g., making a large print on soft paper, working it up and copying it, or making a large negative by reversal, and working on this? S. R. N. (*Eastbourne.*)

If you make a print with the shadow detail suitable for copying, the high-lights will be blank, and it is almost impossible to supply proper detail and gradation by hand. Much can be done by making a positive on a suitable plate, reducing the contrast by full exposure and shortened development, and from this positive make a new negative which can also be controlled as regards contrast.

This production of a new negative is of great utility, and demands experience and skill. It is more difficult when worked on a small scale; an enlarged negative may not be suitable for your enlarger, and if large enough for contact printing it becomes rather expensive.

We therefore advise you to make an enlargement by the Sterry process, which is quite capable of doing what you require. Make up the following stock solution:

Potassium bichromate	1 oz.
Water to	10 oz.
Ammonia (.880)	1 fl. dr.

The working solution is a very weak one—50 to 100 minims of the stock solution to each 10 oz. of water. The stronger the solution the greater is the reduction of contrast, and it is often necessary to make more than one attempt in order to arrive at the strength appropriate to the particular case under treatment.

Find, by strip tests, the exposure necessary to bring out all necessary high-light detail when followed by development to finality, and then give this exposure, disregarding the fact that the shadows will be seriously over-exposed.

Now give the exposed paper three minutes in the weak bichromate bath, taking care that it is fully submerged and free from surface airbells, and rocking the dish gently all the time. Pour off the solution, and wash the paper in continuous changes of water for about half a minute.

Develop as usual. The action is slowed down by the treatment, and it takes considerably longer to reach finality. The print is then rinsed, fixed in an acid bath, washed thoroughly and dried. It should, if all has gone well, have the appearance of a print from a properly graded negative.

If a second attempt has to be made do not use the same developer again.

Film for Autumn Subjects.

I hope to do some landscapes this autumn, including forest scenes. Can I use ordinary film, or must I change over to panchromatic? Is a filter necessary? S. L. N. (*Buckingham.*)

The "ordinary" film you use is orthochromatic, and you can get satisfactory results from it, especially if you use a yellow filter when there are yellows in the subject. It is often the case, however, that an autumn landscape includes colours—orange, russet, red—beyond the range of sensitivity of the ordinary film, and nothing but panchromatic film will do them justice.

In such cases you will get better results with a panchromatic film even without a filter, than with an orthochromatic film with one. There is no difficulty in using panchromatic material, except that the necessary arrangements for development must be observed.

When mist is a feature of the subject it is generally advisable not to use a filter, which has a tendency to "cut out" the haze.

If you can manage it, you will learn a great deal by comparing prints from ortho. and pan. negatives of the same or similar subjects.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

On Visiting Exhibitions

This article is more particularly addressed to those photographers who are visiting the exhibitions of the Royal Photographic Society and the London Salon of Photography now open in London. How to make the best use of the opportunity is indicated, and how to apply the lessons to be learned to personal work.

THE stimulus that comes from frequent submission of work to the larger exhibitions is well recognised. Apart from this there are benefits to be derived from an intelligent study of the selected pictures, whether the photographer's own work figures upon the walls or not.

It is safe to say that the keen photographer visits the major exhibitions with very pleasurable anticipation. There are many who, to our knowledge, each year that the exhibitions of the Royal Photographic Society and the London Salon of Photography are open, make long journeys from the provinces to London, in order to study what is the best of the year's work. They are the first to admit, not only the pleasure that they derive from these visits, but also the benefit that accrues from so doing.

It is well known that for any work to be accepted for either of the shows mentioned, a high standard of excellence has been reached. There is far too much first-class work available for the selecting committees to accept anything short of the best. It is equally certain that some pictures will appeal more than others to individual workers, and it may be accepted as a fact that there is a very good reason for the inclusion of every picture to be seen on the walls.

This is pointed out because many photographers, while giving attention to those pictures which appeal to them ignore those which do not. To follow such a course is to miss one of the greatest benefits from a visit to an exhibition.

The Exhibition as a Whole.

It is suggested that the photographer should first survey the exhibition as a whole. This should arouse feelings of pride in any photographer that his art should produce work of such a high standard, whether his own prints have been selected or not.

It is a good plan for the visitor to walk round the exhibition, taking note of the pictures which appeal, and then to walk round again giving them more careful attention. If time allows the prints which do not attract should be examined. There will be found pictures which seem to have the sole merit of originality, either with regard to the subject, or its treatment, or perhaps both. These prints which may not at first appeal to the photographer will, if carefully studied, be found to express the artistry of the photographer by taking the subject from a new point of view, or some phase that has not been selected for treatment before.

The value of a visit to a photographic exhibition is mainly in the lessons that can be learned by the observant photographer. The exhibition shows pictures taken from new angles, modernistic interpretations of old subjects, as well as the more traditional representations.

The photographer is able to see how pictures may be made of the most simple material, and how little of the subject may be necessary. These rightly studied cannot but be a source of inspiration.

A Warning.

It has already been said that the annual visit to the high-class exhibitions is in the nature of a stimulus, but in this respect a note of warning must be given. It is easy to imitate successful work, not by slavish copying, but by unconscious imitation which is equally to be deplored. The wise photographer will try to place himself in the position of seeing what can be done, and in this way stimulate his own mental vision with a view to finding subjects for his own treatment. It is a well-known fact that the worker who feels that he has exhausted the possibilities that his own surroundings afford, finds in a visit to an exhibition a new incentive to go back to work with fresh ideas.

The modern exhibition amply demonstrates the fact that the modern artist with the camera finds abundance of subjects amongst the simple and commonplace material, and that success is due to the cultivation of the seeing eye, and a mastery of the medium that is selected for pictorial representation.

The Technical Side.

A point that is often overlooked with regard to exhibitions which are primarily of a pictorial character is the technique of the work shown. It may be taken for granted that while the selecting committees are mainly concerned with pictorial work, they would not accept work that displayed technical faults, no matter how good the subject matter. It is hardly possible that the photographer who is not able to produce results which are good technically could produce a print which conveyed the impression of the subject as intended. The prints shown are examples of good technical photography, correct exposure and development of the negative, and printing process used at its best.

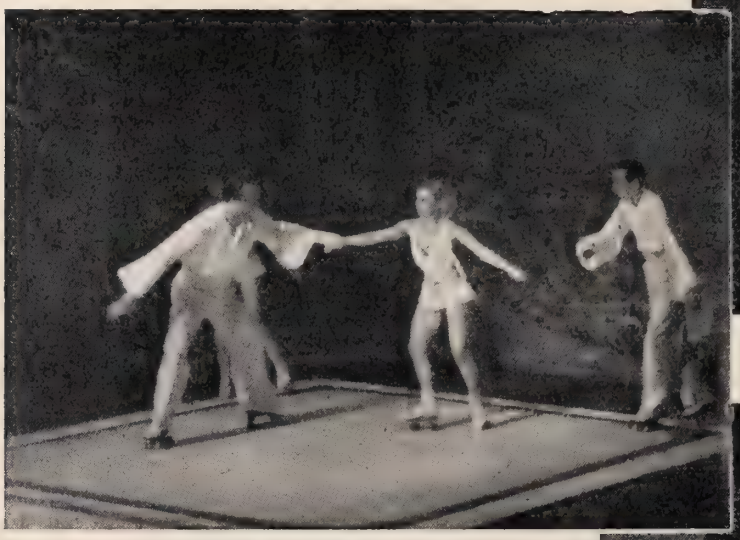
Comparisons.

There are many photographers who, upon visiting an exhibition, find their own work suffers when compared with the technique of that shown. They may well find that their choice bromide prints are of poor colour, with a short range of tone, when compared with the bromides seen. Not the least useful result from a visit to a high-class show of pictorial work is a healthy dissatisfaction with the photographer's own work.

Lastly, the keen photographer is able to see the results of the different printing processes, as shown by those who have attained a mastery of them. Almost every method of making prints, both old and new, is to be seen, and it is safe to assume that in each case the process is chosen for its special characteristics.

Snapshots in the Theatre

By JOHN VILLIERS.



IN these days of ultra-rapid film material and wide-aperture lenses, action photography in the theatre or music-hall during the performance is within the possibilities of almost any amateur who possesses the necessary equipment. The only requisites are a panchromatic film of the highest speed, such as Agfa ISS or Kodak SS Pan., and a lens with a maximum aperture of f/2. A lens working at f/2.8 or f/3.5 can be used under favourable circumstances, but where there is fairly rapid motion in the scene photographed, a certain amount of blurring of the negative will be inevitable. But even with such lenses photographs can be taken with success if the photographer does not allow his enthusiasm to run away with him and attempt the impossible.

Different theatres vary quite a good deal in the amount of light used, and even in the same theatre the lighting depends largely upon the scene. The front or second row of the stalls is not a very good position from which to take photographs, as the upward view often causes the feet of the performers to be cut off. Some theatres have a horse-shoe shaped circle, and one or other end of this horse-shoe provides an excellent viewpoint. From such a position practically the whole of the stage will be in focus with the aperture of the lens set at f/2, or, what is nearly the same thing, f/2.2.

The small cameras with large-aperture lenses of short focal length and built-in range-finders coupled with the lens setting are the ideal for this type of work. The range-finder makes it easy to keep the principal actors in accurate focus all the time, and the large apertures permit of shutter speeds as high as 1/100th sec. when the lighting is powerful enough, as sometimes happens when the figures of the actors are clothed in white and strongly floodlit.

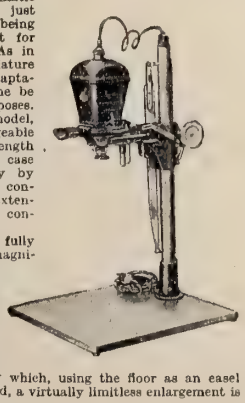
1/60*th sec. at f*/2.8.

1/100*th sec. at f*/2.

1/25*th sec. at f*/3.5.

It is extremely difficult to give an indication of the exposures used. Experience is by far the best teacher, for meters are practically useless; when they give a reading at all the result is certain to be a bad over-exposure. The best plan is to give varying exposures at the first attempt at theatre photography, and note the results after development. If there is but little motion in the scene photographed, exposures of ½ or ¼ sec. may be given, and others of a shorter duration —from 1/20th to 1/100th sec., if there is plenty of

WRITING ADVERTISEMENTS



One of the unfortunate concomitants of running a successful business these days is the preparation of advertisements. We deplore the necessity of having continually to blow our own trumpet in this way, but unhappily we have cause to appreciate the very considerable effect that advertising has upon our business.

It is our practice to endeavour to keep our advertisements as simple and as straightforward as possible. We write them ourselves and are flattered to notice that our amateurish efforts have met with such evident approbation from our distinguished friends in the trade. If all else fails, we have decided to earn our living by conducting correspondence classes on the subject.

To come to the point. We are the only firm in Great Britain exclusively dealing in miniature apparatus. This is an objective statement of fact. Our business is, of necessity, we believe, a highly individual one. We have one address only and have no intention of ever turning ourselves into an impersonal company. Our staff, small in numbers but highly trained, is thoroughly conversant by personal experience with every problem arising out of miniature photography. In this way we are able to offer a unique service of advice and assistance—besides merely selling apparatus—to miniature photographers.

MINIATURE ENLARGERS

The enlarging season is at hand. We have actually in stock every dependable miniature enlarger on the British market. These include the Valoy, the Focomat, the Vertex, the Ensign, Magniphot, Ikomat, Certos, Filmarex, Foth, Miraphot, Lumimax and Exakt. We shall be pleased to send lists describing these various models. The enlarger we illustrate this week is the new "Fam" automatic enlarger, two models of which are available, for 4×4 cm. and 6×6 cm. negatives respectively.

The new "FAM" automatic enlarger, which we have just received, strikes us as being essentially the instrument for the serious miniaturist. As in the case of the leading miniature cameras, its keynote is adaptability. It can at any time be converted for various purposes. For instance, for the 6×6 model, three instantly interchangeable lenses of different focal length are available, and in the case of both enlargers, simply by adding a supplementary condenser and a lamphouse extension piece, the enlarger is converted for power lighting. Although the "FAM" is fully automatic, its range of magnification is not therefore restricted, as is often the case. Enlargements of ten diameters are possible on its 24×20 in. baseboard (15 diameters when the short-focus lens is employed) and a supplementary hand adjustment is provided by which, using the floor as an easel with the lamphouse reversed, a virtually limitless enlargement is obtainable.

The lamphouse is raised by turning a large porcelain wheel located at its side, and is instantly lowered to any position by a touch of the spring; on releasing which it automatically locks at the desired height. The "FAM" is provided with a most ingenious negative holder enabling single negatives or strips to be used at will. In the latter case, by simply touching a spring release, the film may be drawn through the carrier from exposure to exposure without any danger of scratching.

The enlarger is fitted with an f/4.5 enlarging anastigmat, the stops of which are engraved on the side where they may be easily seen. Masks for Leica size, 3×4 cm. and 4×4 cm. negatives are provided.

Prices: Fully automatic "FAM," 4×4 cm., £14 14 0.
Fully automatic "FAM," 6×6 cm., £18 18 0.

PROCESSING of MINIATURE FILMS.

For miniature negatives, specialist processing is absolutely essential. We are the only firm in the country exclusively undertaking this kind of work, and years of experience in miniature technique enable us to produce flawless and virtually grainless negatives. We undertake two services: Standard Fine-grain Development, for which the ordinary charge of 1s. 6d. per spool is made, and Paraphenylene Diamine Development, for which we charge 5s. 6d. for a Leica size spool. The latter service is positively the finest that at the present stage of miniature photographic technique it is possible to obtain. Extreme precautions are taken to produce superlative results and each film is finally treated in "TEITEL" SCRATCH-PROOF SOLUTION, rendering it practically impervious to subsequent damage. Write to us for full particulars.

A WRITTEN GUARANTEE OF MECHANICAL AND OPTICAL PERFECTION ACCOMPANIES EACH OF THE FOLLOWING USED CAMERAS. WE SUGGEST A CAREFUL COMPARISON OF THE PRICES OF THE APPARATUS DESCRIBED BELOW WITH EQUIVALENT EQUIPMENT OFFERED ELSEWHERE.

LEICAS:

Leica Model III, chromium, f/2 Summar lens, ever-ready case. As new.....£31 15 0
Leica Model III, chromium, f/3.5 Elmar, ever-ready case. As new.....£24 17 6
Leica Model III, black, f/3.5 Elmar lens, ever-ready case. As new.....£23 15 0
Leica Model II, black, f/2.5 Hektor lens, ever-ready case. As new.....£21 10 0
Leica Model II, chromium, f/3.5 Elmar, ever-ready case. As new.....£20 10 0
Leica Model II, black, f/3.5 Elmar. Practically new condition.....£19 10 0
Leica Model I, f/2.5 Hektor lens, non-interchangeable. Good condition.....£11 11 0
Leica Model II, black, f/2 rigid Summar lens, case. As new.....£25 10 0
Leitz Thambar, 9-cm. f/2.2, with special pigskin case. Cost £22 19s. As new.....£17 15 0
Leitz 13.5-cm. f/4.5 Hektor Lens, coupled. As new £14 15 0
Leitz 9-cm. f/4 Elmar Lens, uncoupled. Excellent condition.....£6 17 6
Leitz 9-cm. f/4 Elmar Lens, coupled. Very latest model. In new condition.....£8 17 6
Leitz 13.5-cm. Elmar Lens, coupled. Excellent condition.....£11 15 0
Leitz 13.5-cm. Elmar Lens, uncoupled. Excellent condition.....£7 10 0
Meyer Tele-Megor 18-cm. f/5.5 Lens, coupled for Leica. As new.....£18 10 0

CONTAXES:

Contax Mode II, f/2 Sonnar lens, ever-ready case. As new.....£39 10 0
Contax Model II, f/2.8 Tessar lens, ever-ready case. As new.....£34 10 0
Contax Model I, latest wedge-type range-finder, f/2 Sonnar lens. As new.....£32 15 0
Contax Model I, as above, but fitted f/2.8 Tessar lens, ever-ready case. As new.....£24 10 0
Zeiss 13.5-cm. f/4 Sonnar Lens, for Contax. As new £16 15 0

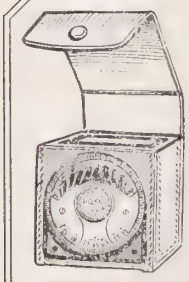
EXAKTAS:

Exakta Model B Multispeed, f/2.8 Zeiss Tessar lens, shutter speeds from 1/1,000th to 12 secs., delayed action, case. New condition.....£21 10 0
Exakta Model B, as above, but fitted f/3.5 Tessar, case. As new.....£19 10 0
Exakta Model A, latest lever-wind model, f/2.8 Tessar lens, case. As new.....£18 0 0
Exakta Model A, f/1.9 Dallmeyer Super-Six lens, leather case As new.....£21 10 0
Exakta Model A, f/3.5 Tessar. Excellent condition £13 15 0
Exakta Model A, f/3.5 Ihagee lens. Very good condition.....£11 15 0
Exakta Junior, f/4.5 Meyer Goerlitz lens, leather case. Excellent condition.....£9 7 6
Dallmeyer Dallon 4-in. f/5.6 Telephoto Lens, for Exakta camera Excellent condition.....£6 10 0

MISCELLANEOUS CAMERAS:

Automatic Rolleiflex, 6×6, f/3.5 Tessar lens, very latest model, fitted Rapid Compur shutter, ever-ready case. As new.....£19 17 6

MISCELLANEOUS CAMERAS—contd.



Automatic Rolleiflex, 6×6, f/3.8 Tessar, normal Compur, ever-ready case. As new.....£16 15 0
Automatic Rolleiflex, 4×4, f/2.8 Tessar, latest model, with viewing windows on top of finder lens, ever-ready case. As new.....£17 15 0
Automatic Rolleiflex, 4×4 cm., f/2.8 Tessar lens, very latest model, fitted with Rapid Compur shutter, ever-ready case. As new.....£20 15 0
Rolleicord, f/3.8 Triotar lens, ever-ready case. As new £11 15 0
Rolleicord, f/4.5 Triotar lens, leather case. Good condition.....£8 5 0
Zeiss Ikoflex, 6×6 cm., f/6.3 Novar lens, Klio shutter. As new.....£4 15 0
Plaubel Makinette, 16-on-V.P., f/2 Supracomar lens, Compur shutter up to 1/500th sec. As new £15 0 0
Baby Ikonta, f/4.5 Tessar lens, Compur shutter. As new.....£6 17 6
Rodenstock 16-on-V.P. Camera, f/2.9 Trinar lens, Compur shutter, leather case. As new.....£4 15 0
Baldi Camera, 16-on-V.P., f/2.9 Trioplan lens, Compur shutter.....£6 15 0
Planovista V.P., f/2.7 Makro Plasmat lens, Compur shutter, leather case. As new.....£10 17 6
Voigtlander Perkeo, 4×3 cm., f/3.5 Skopar lens, Compur shutter. Excellent condition.....£5 15 0
Welta Perfecta, f/3.5 Trioplan lens, Compur shutter, case. As new.....£11 17 6
Kodak Duo, f/3.5 lens, Compur shutter case. Excellent condition.....£7 15 0
Ditto, f/4.5 lens, 3-speed shutter, case. As new £4 0 0
Kodak Retina, 35-mm. Film Camera, f/3.5 Xenar lens, Compur shutter, case. As new.....£6 17 6
Voigtlander Bessa, 3¼×2¼, f/4.5 Skopar lens, Compur shutter. As new.....£6 17 6
Piccochic, 16-on-V.P., f/2.9 Vidanar lens, Compur shutter. Excellent condition.....£4 10 0
Baldax, 16-on-3¼×2¼, f/3.5 Trioplan lens, Compur shutter. New condition.....£5 15 0
Planovista V.P., f/3.5 Trioplan lens, Compur shutter. New condition.....£7 17 6
Nagel V.P., f/4.5 Radionar lens, Telma shutter £3 15 0
Foth-Derby, 16-on-V.P., f/2.5 lens, focal-plane shutter. As new.....£5 5 0
Dolly, 4×3 cm., f/2 Xenar lens, Compur shutter. As new.....£9 10 0
Weltur Camera, 16-on-3¼×2¼, f/2.8 Tessar lens, delayed-action Compur shutter. Indistinguishable from new.....£18 0 0
Nagel Pupille, 3×4 cm., f/3.5 Leitz Elmar lens, Compur shutter. First-class condition.....£9 9 0
Nagel Pupille, 3×4 cm., f/2 Xenon lens, Compur shutter. As new.....£12 12 0
520 Ikonta, 16-on-3¼×2¼, f/3.5 Tessar lens, Compur Rapid shutter, leather case. Indistinguishable from new.....£8 12 6
Super Ikonta 530/2, f/3.8 Tessar lens, Compur Rapid, ever-ready case. Indistinguishable from new £18 17 6
Super Ikonta 530/2, f/4.5 Tessar lens, Compur shutter, leather case. As new.....£14 5 0
Super Ikonta 530, 16-on-3¼×2¼ film, Compur shutter. As new.....£13 10 0
Super Ikonta 530/16, f/3.5 Tessar lens, Compur shutter, ever-ready case. As new.....£19 17 6
Zeiss Ikonta 520, 16-on-3¼×2¼, f/4.5 Tessar lens, Compur shutter. As new.....£7 7 0
Dollina Model I, f/2.9 Radionar lens, Compur shutter. As new.....£7 5 0
Korelle Reflex, f/2.9 Radionar lens, the 2¼×2¼ reflex made to take telephoto lenses. As new £9 9 0
Kolibri, 16-on-V.P., f/3.5 Tessar lens, Compur shutter, de luxe case. As new.....£6 15 0
Contaflex, f/2 Sonnar lens, ever-ready case. As new £55 0 0

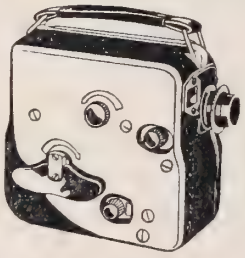
R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

For Everything

Photographic (Ciné and Still)—Cameras, Projectors, Enlargers and all Accessories and adjuncts; for really exceptional Bargains in Second-hand Apparatus; for unrivalled EXCHANGE and OUT-OF-INCOME Facilities . . . . . go to "the Westminster." You cannot do better.

"PICOSCOP"

New & Economical Electric Cell Exposure Meter



Direct and immediate readings from 1/4,000th sec. to 2 mins. Instant adaptation to any plate/film speed and lens stop. Compact, light, simple and most accurate. In ever-ready case.

Only 59s. 6d.

Nine monthly payments of 7/-.

New Model "H" PATHESCOPE

MOTOCAMERA 9.5 mm.

MARVEL OF COMPACTNESS AND EFFICIENCY.

Measures only 4¾ × 2½ × 4½, weighs only 2¼ lb. New, remarkably silent, sweet-running movement. Taylor, Taylor & Hobson f/2.5 lens. Brilliant eye-level finder. Single picture device. Loaded in a few seconds. Call and see it.—or write for details.

Price £6 : 6 : 0

Nine monthly payments of 14/9.

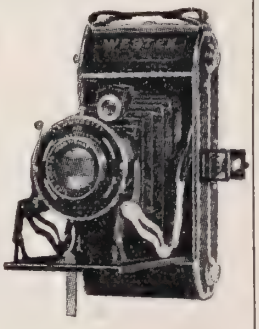
Special leather case for Camera and 2 films.....15s. 6d.

ZEISS IKON 4-Fold Tripod

Obtainable only at THE WESTMINSTER.

Polished Maplewood, self-locking clips, revolving top. 17½ in. long closed; open, 50 in. Weight 24 oz. Cost 35/-.

Our price **15/9**



Canvas case 5/3.

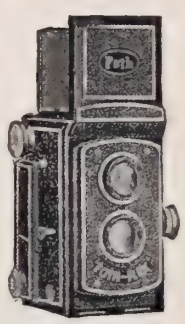
Postage 6d.

LAST FEW

'WESTEX' Roll Film Cameras—

Value Magnificent!

'Westex Four-Five'



8 or 16 on normal 3½ × 2½ film.

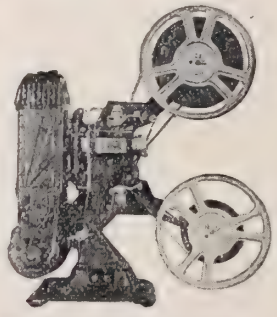
Very highest quality in every detail. Superb f/4.5 anastigmat, giving exceptionally fine definition, in focussing mount, delayed-action Prontor II shutter, 1 to 1/150th sec., T. and B. Sturdy all-metal body, plated edges, best leather covering and bellows. Quick, self-erecting front. Optical direct-vision and brilliant waist-level finders. Hinged easy-loading back, panchromatic safety windows. Easy and delightful to handle, yet suitable for the most advanced work anywhere. By far the best all-round value offered.

Obtainable only at the Westminster. **£4:8:9**

Nine monthly payments of 10/5.

Velvet-lined Leather Case, 6/9 extra.

FOTH-FLEX



TWIN-LENS REFLEX WITH F/2.5 LENS.

12 pictures 2¼ × 2¼ on normal 3¼ × 2¼ film. With f/2.5 Foth anastigmat, automatic film counter, focal-plane shutter, 1/25th to 1/500th sec. and Time, with delayed action.

Wonderful Value!

£13:10:0

Nine monthly payments of 31/6.

PATHESCOPE 200-B 9.5mm PROJECTOR

Fitted with highly efficient 200-watt direct lighting system, giving a brilliant screen picture 10 ft. wide. Flickerless projection. Very compact. Fan-cooled and asbestos-lined lamphouse. Simple threading. Universal tilting movement. Motor rewind, for use on A.C. or D.C. supply, complete with lamp and motor drive for use on 100-volt circuit, 300-ft. reel and flex.. **£15:0:0**

Nine monthly payments of 35/-.

Resistance for use on voltages 200 to 250, extra **£1:15:0**

AGFA 'Domestino' 16mm PROJECTOR

2-in. Projection Lens. All-metal body, 100-watt lamp, motor drive, fitted speed control, suitable *for all voltages*, 110 to 220 volts. Complete with 400-ft. reel and rewind arm. Very neat and compact.

PRICE **£17**

Nine monthly payments of 39/8.

Carrying case extra...15/-.

Here's a fine Collection!

light. It is seldom that 1/20th sec. fails to give a printable result.

If one is fairly close to the stage, 1/100th sec. sometimes fails to arrest movement when something really fast is going on. But almost always—even in the fastest scenes—there is a momentary period of rest during a movement, and this is the moment to capture for the shutter's release. Probably everyone has noticed how a ballet-dancer pauses for a fraction of a second after every turn, even when she is spinning like a top. Always is there such a momentary stasis, even in the most rapid of scenes.

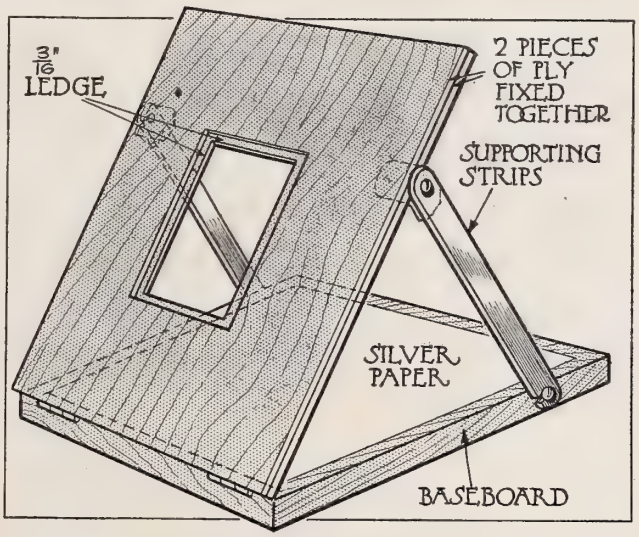
Development of films calls for care. Fine-grain processing is essential on account of the rather coarse grain of the very fast panchromatic emulsion used. Very successful results may be obtained with developers such as Johnson's Fine Grain and Leicanol. (Johnson's Meritol is not so successful—it requires rather a full exposure.) Amateurs who make up their own solutions would do well to try out one or two of the special formulæ advocated for this kind of work. Those containing metol are particularly successful, for this developer brings up the shadow detail very quickly. An extremely useful developer is the well-known Eastman-Kodak Modified D-76—popularly known as "Buffered Borax." Over-development must at all times be stringently avoided.

Lastly, the amateur who attempts theatre photography will do well to secure permission before producing his camera. Many theatres now, unfortunately, prohibit photography by members of the audience during the performance, owing to sundry abuses of the privilege in the past. If, however, a courteous request is directed to the management with the assurance that it is amateur work only and for no commercial purpose, permission will generally be granted.

Readers' Hints, Tips and Gadgets

A SIMPLE RETOUCHING DESK.

FOR spotting negatives and lantern slides, or for retouching with pencil or dyes, it is essential that the negative be held steady and rigid and have an even illumination transmitted through it. A simply constructed desk costing less than a shilling is described.



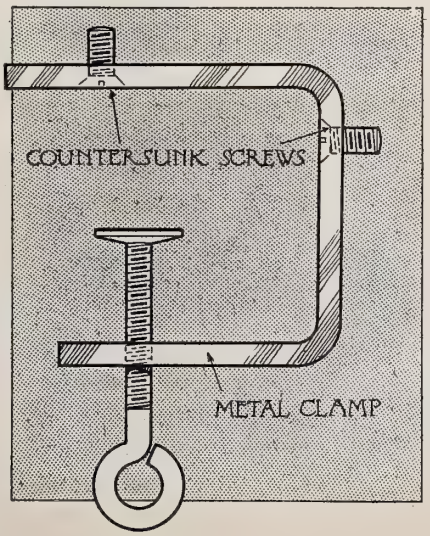
The base is simply a piece of wood 9×9×½ in. thick.

The sloping portion is made by glueing, nailing or screwing together two pieces of thin plywood, also 9×9 in. In the centre of one of these pieces a rectangular opening 4×3 in. is cut out with a fretsaw, and in the other, an opening 4⅜×3⅜ in. When the two pieces are placed together, a 3/16ths-in. ledge will be provided all round for a quarter-plate negative. These sizes are also suitable for lantern slides and smaller, if card masks are cut for the smaller sizes.

The sloping negative carrier is fixed to the base by means of two 1-in. hinges and supported by two stays of ½-in. stout strip metal, as shown. A slot in the end of each of these strips engages in a screw fixed to the side of the base and enables the desk to fold up when not in use. Two perforated strips, two angle brackets and two nuts and bolts, "borrowed" from a Meccano set, will serve admirably.

A piece of white or silver paper should be pasted on to the top of the baseboard to reflect the light, which should be above and in front of the worker. For dense negatives, the electric lamp can be placed immediately under the negative.

A. T. BAILEY.



A CAMERA CLAMP FOR THE POCKET.

ALTHOUGH there are many good proprietary makes of camera clamps on the market, very few are adaptable to hold the camera for two different positions, while others have a very limited clamping space.

The gadget described, which can be used for two positions, costs but a few pence and is reasonably light in weight. It is flat, will lie comfortably in the pocket, and is very sturdy and rigid.

Obtain an iron clamp, like that in the illustration, from an ironmonger or from Messrs. Woolworth, about two or three inches long, together with two countersunk Whitworth screws. If it is for a British camera they will be ¼-in. diameter, but if it is a Continental pattern, then they should be ⅜-in. diameter Whitworth screws. Approximately, in the positions shown, drill and tap the clamp with the same screw thread of the screws used. If countersunk screws cannot be obtained, the cheese-head or round-head type will be quite suitable, but they will leave a corresponding dent wherever the clamp is used.

The screws are then screwed home tight into the clamp so that they are flush with the metal and, if convenient, the heads are either soldered or burred in to prevent them turning when the camera is screwed on. The clamp is now ready for use.

This type of clamp is also very useful when holding the camera in the hand, as it affords a kind of handle that can be turned to any position to suit.

The camera can also be secured at various angles if washers of suitable thicknesses are placed over the screw between camera and clamp bar.

For long exposures, such as for interiors, floodlighting and night photography, where there is generally a ledge or railing available, and where a tripod is not handy, this camera clamp will be found quite efficient and well worth the making.

K. G. WELLS.

Around the

By "FLEETWING."

Lowestoft Fishermen unloading the herring catch at Scarborough.

THE fishing industry offers the amateur photographer a wealth of interesting material for picture-making. It is usually carried on amid picturesque surroundings such as old harbours and quaint quaysides, not forgetting the small fishing hamlets where the modern steam- or oil-driven craft are unknown.

The fishing industry is mainly divided into two classes, the trawlers which catch plaice and soles, etc., and the drifters which are engaged in the herring fishing. The former operate all the year round at such ports as Grimsby, Hull, Lowestoft, Brixham and Fleetwood, while the drifters follow the herring around the coast. For instance, you will find the drifters at the northern ports in the summer months and finishing up with the East Anglian campaign at Lowestoft and Great Yarmouth in the autumn.

Pier-heads and jetties provide excellent places for securing photographs of the fishing boats as they arrive and leave the port. By selecting a day when the sea is rough, interesting studies are obtainable worthy of any exhibition wall. The old-time sailing smacks, beloved by painters, still sail from Lowestoft and Brixham. These craft are fast disappearing, being converted into motor-driven vessels.

In the case of a visit to a trawling port, you will find it necessary to make your visit to the markets early in the morning. By using 'chrome films or fast plates, pictures of the crews landing their catches may be secured. A 1/25th second is sufficient to obtain a general view of the vessels, but nothing under 1/100th second will arrest motion in close-ups of the fishermen actually landing the catch. The photographer will find the fishermen willing to assist in making a picture if you work quickly and do not waste time. A promise of a print or two is always appreciated. By using the covered markets in conjunction with a lens hood, effective against-the-light pictures are obtainable, but remember they require full exposure and careful development. The wet quaysides will provide attractive reflections in the foreground.

Early morning on the Trawl Market. 1/50th sec., f/4.5.

East Coast Drifters discharging their catches direct into a Dutch sailing vessel at Lowestoft. 1/25th sec., f/11. Ilford Auto-filter.

As already stated, the herring season is about to commence at Lowestoft and Great Yarmouth, and these two ports assume a busy atmosphere from about the end of September to the beginning of December. The herring industry is very popular with photographers as it provides plenty of life and action, and is an ideal ciné subject.

Hundreds of Scotch and local drifters land the silvery herring daily at these two ports. About the end of October, when the season is in full swing, is the best time to pay a visit. Unlike the

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Fishing Ports *with a Camera*

Mending the Nets. 1/50*th sec. at f*/6.3. *Golden Iso-Zenith.*

trawlers, the drifters are continually arriving and leaving the ports, and some attractive shots can be got from the pier-head at Lowestoft.

You will find a host of subjects on the fish markets, the drifter crews landing the herring in baskets, the fish-packers at work, vessels taking aboard stores, and numerous other subjects which will tax your supply of sensitive material. No record of the herring industry is complete without some shots of the famous Scotch fisher lassies at work. You will find them in all weathers at work on the pickling plots near the fish markets at Lowestoft and Yarmouth. If possible, choose a bright morning so that it is possible to stop the lens down to secure depth of focus

A Scotch Herring Drifter, taken from the Pier-head at Lowestoft. 1/50*th*, *f*/8.

and, at the same time, use a fast shutter speed. The girls work very fast, their speed will amaze you, and nothing less than 1/200th of a second will stop blurred photographs. You will find the girls working at long troughs filled with herring, and it is here that you will secure the majority of your pictures. The girls are mainly dressed in black oilskins, with their hair tied back with a handkerchief. They make interesting portraits or close-ups, which you can usually get by taking several at work and enlarging sections of the developed negatives. The herring industry series can be concluded with some shots of the foreign cargo steamers at Lowestoft, loading the prepared barrels of herring for the Continental ports. By using super-sensitive panchromatic material and a wide-aperture lens, some attractive and interesting night photographs present themselves, and are worth several exposures.

No special apparatus is needed for this very attractive subject. A reliable hand camera with a good lens and shutter will serve for any of the shots indicated. The miniature is very good for the purpose with its extra equipment of films, or a reflex and plates may be used if not too bulky for quick work. In any case, always take plenty of material as there will be endless pictures available.

After a day's work at a fishing port you will naturally be thinking of dark-room operations. Do not over-develop the negatives. You may find that negatives which you expected to be under-exposed are about right, due to the reflection of the water in the harbour scenes. Small prints seldom do justice to the original scene. Half-plate enlargements in black-and-white on bromide paper and glazed will give satisfaction and pleasure after a day with a camera at one of our fishing ports.

Finally, do not forget to post off those promised prints to those who may have assisted you to get some good photographs.

Scotch Fisher Lassies at Lowestoft. 1/100*th sec. at f*/6.3.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

An Exhibition of Cinematography, comprising films, stills and apparatus, will be held at the Galleries of the Royal Photographic Society, 35, Russell Square, W.C.1, during the month of December, 1936. Lectures and demonstrations of various aspects of cinematography for amateurs will be given, and in conjunction with the exhibition a sub-standard film competition will be held, open to all amateur workers. There is a class for amateurs only, in which entries will be limited to films not exceeding fifteen minutes' projection time. Entries must be sent to the Secretary of the Royal Photographic Society at the above address on or before November 2nd. Full particulars and entry forms will be sent upon application to the above address.

The Liverpool Amateur Photographic Association, which is one of the oldest in the country (founded in 1853), is still going very strong indeed, and is starting a new session. A society with a record such as that of the L.A.P.A. is well worth the consideration of all photographers in the Liverpool district, and those who are not already members should apply for full particulars and syllabus to the Secretary, Mr. E. H. Austin, L.A.P.A., Bluecoat Chambers, School Lane, Liverpool.

An award of 21s. has been made to Mr. H. F. Webster of 12, Beechwood Avenue, Darlington, for the winning print in last week's Wallace Heaton Competition. Full particulars regarding a new Wallace Heaton competition will be found in our advertisement pages.

A new camera that is a further step towards the ideal miniature, and which embodies many of the ideas that readers have advocated from time to time, is the "Primarflex," which has just been put on the market by Actina, Ltd., 29, Red Lion Square, W.C.1. This camera, which is a beautifully made piece of apparatus, from the factories of Curt Bentzin of Gorlitz, is a single-lens reflex, taking pictures 2¼ in. square and using a 2¼ × 3¼ roll film, 12 exposures being obtained. Plates, either 2¼ in. square or 4.5 × 6 cm., can also be used without any alteration whatever to the camera. A focal-plane shutter is provided, giving a range of speeds from 1 to 1/1,000th sec., Time and Brief and delayed-action release are also included. The film and shutter wind are combined, thus the only operations necessary are setting the speed of the shutter (all speeds are given on one knob control), winding film and shutter together with one movement, and pressing the release to take the picture. The change over from films to plates is ingeniously arranged so that single metal plate-holders can slide into the same focal plane as that occupied by the film. This can be removed bodily in a special neatly constructed roll-holder. An automatic numbering device indicates the number of the picture taken, and a commendable feature is the very gentle pressure required to operate the shutter release, and the fact that the mirror is spring lifted so that no lag occurs between pressing the release and the actual taking of the picture. The mirror may be set independently of the shutter wind should the user wish to examine a subject on the screen. The lenses normally fitted are f/2.8 or f/3.5 anastigmat, while Telephoto lenses of various focal lengths are available. The price of this camera with Meyer Trioplan f/2.8 is £31 10s., and the price with Zeiss Tessar f/3.5 is £36 10s. Further particulars are obtainable from Messrs. Actina, Ltd., at the above address.

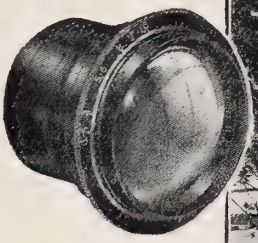
A particularly interesting programme has been arranged for the opening autumn evening (at 6.30 p.m. on October 5th) of the City of London and Cripplegate P.S. A lecture on "Some Properties of Photographic Emulsions" will be given by Mr. Olaf Bloch, a Past-President of the R.P.S. In addition the competition prints taken on the 1936 Tug Boat Outing will be judged, and any who attended this outing will be welcomed at the meeting. They may bring their prints with them, or send them in advance to Mr. J. J. Butler, Cripplegate Institute, Golden Lane, E.C.1.

Workers in colour photography who wish to try the Finlay Process should apply to Charles Baker, Ltd., 244, High Holborn, W.C.1, for a copy of the book of instructions and price list of the process which has just been issued and will be supplied free upon application.

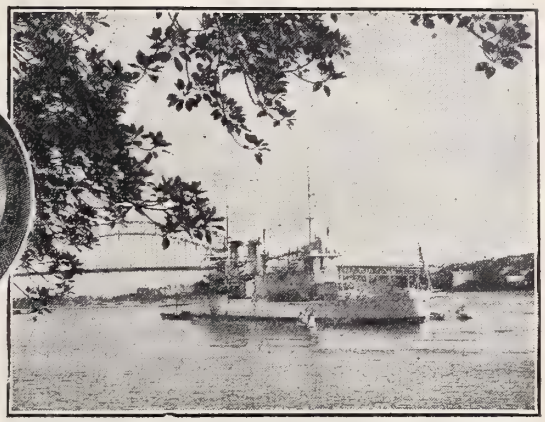
Ensign, Ltd., 88/89, High Holborn, W.C.1, have asked us to note that the price of the Model AV/O Ensign Magnaprint Enlarger which was priced at £8 10s. in their advertisement in our issue of September 16th, should have been £8 15s.

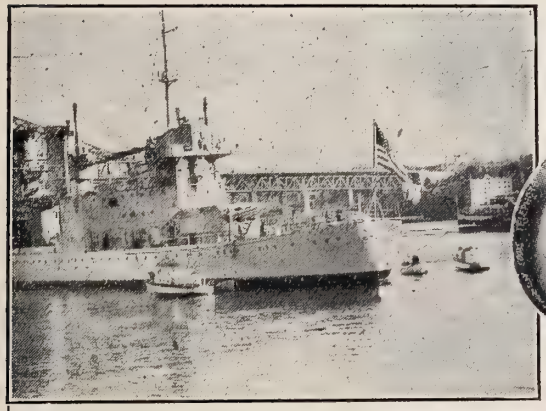
A new session for photography is just starting at the Battersea Polytechnic. As in previous years, this is under the direction of Mr. Edgar Senior, and the syllabus both for elementary and advanced students is very comprehensive and complete. The photographic department is extremely well fitted for practical work. Full particulars are obtainable from Mr. Edgar Senior at the Battersea Polytechnic, Battersea Park Road, S.W.11.

Readers are finally reminded that to-day, September 30th, is the closing date, not only of our monthly competitions, but also of the special competition for novices and that for pictures dealing with the subject "Can the Camera Lie?" Final coupons will be found in this issue.



The question of polarised light and its peculiarities in photography have already been dealt with in "The A.P.," and we are glad to note that a firm of the eminence of Carl Zeiss (London), Ltd., have now put a special polarising filter on the market. This is called the "Herotar," and the numerous advantages of polarised light, particularly in the matter of cutting out objectionable reflections, now becomes easily available for the amateur photographer. In use the filter is fitted to the front of the lens in the ordinary way, and the increase of exposure is only about two or three times. The "Herotar" filter is made by employing the material known as Herapathite, which consists of an artificially obtained quinine and iodine compound. In the "Herotar" a pale grey-green layer of Herapathite, prepared by Professor E. Bernauer's method, is cemented between two glass plates, and in use the subject to be photographed is first observed visibly through the "Herotar," held in front of the eye or the viewfinder, and in the case of a reflex through the lens itself. The "Herotar" is rotated about its axis until any distracting reflected light such as that from windows, mirrors, glazed pictures or water, is extinguished. The "Herotar" at that angle on the camera lens then enables the photograph to be taken without the reflections being recorded. In addition to a series of "Herotars," supplied by Messrs. Carl Zeiss, we have heard from Messrs. R. F. Hunter Ltd. that they are now supplying the "Herotar" polarising screen specially for use with the Rolleiflex and Rolleicord cameras, and particulars will be supplied to users of these cameras on application to Messrs. R. F. Hunter Ltd., "Celfix House," 51, Gray's Inn Road, W.C.1, or for the general series of "Herotars" to Messrs. Carl Zeiss (London), Ltd. Mortimer House, 37–41, Mortimer Street, W.1.





A new catalogue of sub-standard films has been issued by Messrs. Ensign, Ltd. from their film library. These include a remarkable variety of subjects to suit all tastes, and the list should be obtained by all amateur cinematographers who are anxious to augment their projection programmes. A copy will be sent upon application to the Ensign Film Library, 88/89, High Holborn, W.C.1.

Granville PRODUCTS
PRODUCE BETTER PICTURES

Whether used by the novice, the advanced worker or the professional, GRANVILLE PRODUCTS ensure the maximum results with the minimum effort. Every day we receive testimonials from new customers who are surprised and delighted—surprised at the quality obtained at such a low price—delighted with the ease in which such perfect pictures are obtained. If you are just beginning, start right with " GRANVILLE " ; if you have years of experience, change to " GRANVILLE." You will never change again !

"THE GRANVILLE GUIDE"

This new publication is a superb 16-page de luxe illustrated edition. Specially issued for users of Granville Photographic Products, it contains up-to-date working instructions, formulæ, and many useful articles specially written by our own experts. A complete list of all materials is also given, including many new lines. If you have never communicated with us before, **write to-day for your copy.** Applications should be addressed to: PUBLISHING DEPARTMENT, Granville Gulliman & Co., Ltd., P.O. Box 3, Leamington Spa.

If you have previously communicated with us, please do not apply, as a copy will be sent to you.

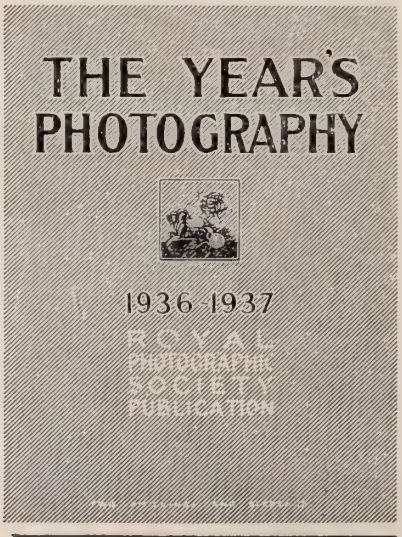
81st ANNUAL EXHIBITION

SEPTEMBER 12th—OCTOBER 10th.

OPEN DAILY

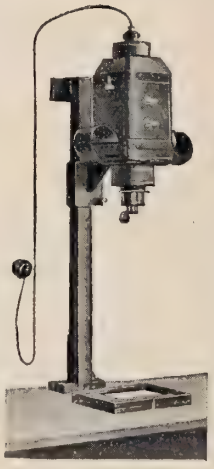


10 a.m. to 9 p.m. (excepting Sundays), Tuesdays and Fridays from 10 a.m. to 6 p.m. only. Admission Free.

AT THE GALLERIES OF THE

Royal Photographic Society

35, Russell Sq., London, W.C.1



The Year's Photography contains a fine selection of some of the best prints and lantern slides from the Pictorial, Natural History and Record sections of the Annual Exhibition.

Obtainable from all booksellers and photographic dealers, price **2/6**, or direct from the Publications Dept. of the Society, price **3/-** post free. Cloth bound **5/-**, post free **5/9**.

EXAKTA !

THE BEST of all Miniature Cameras

EXAKTA HANDBOOK

Just published. Fully explains the possibilities and working of this beautiful camera.
Post free, **3s. 6d.**

LUMIMAX ENLARGER
FOR EXAKTA NEGATIVES.

Hard, seasoned wood body covered leatherette, white enamelled inside, and fitted with flashed opal glass for equal diffusion of lighting. The back is hinged and ventilated.

A clamp is supplied to enable the Enlarger to be used either horizontally or vertically.

A safety switch is in the flex.

Enlargements from 4½ × 6 cm. (V.P.) negatives can be made up to 12 × 10 inches, or even larger.

PRICES :

MODEL A. For use with lens on Exakta camera..... **£4:10:0**

MODEL B. Do., do., fitted with f/4.5 anastigmat and 3-in. condenser, for use with 6 × 6 cm. negatives and smaller sizes..... **£6:10:0**

Masks extra, **4/6** each.

Have you received the new Exakta Price List ? If not, ask for one—post free.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

PHOTOGRAPHY FOR PEACE.

SIR,—Many of your readers must often feel that they would like to use their photographic skill, as thousands of others are applying their respective talents, in the services of the cause, which, as the World Peace Congress and World Youth Congress have shown, is uppermost in all people's minds in these days—the cause of Peace.

In case any such do not quite know how they can best do this, may I be permitted to suggest to them, through you, that they get into touch with me at 59, Waterfall Road, London, N.11, as I can make good use of the services of anyone who is keen enough to offer them voluntarily in this great cause.—Yours, etc., HUMPHREY S. MOORE.

PREVENTION OF TRIPOD-SLIP.

SIR,—I read with interest your correspondent's tip to prevent tripod legs from slipping, as given in a recent issue of "The A.P."

I overcame this difficulty by sliding an india-rubber "thimble" over each foot. These are obtainable from Woolworth's (stationery counter), and have the advantage over tubing that the rubber covers the points of the legs.—Yours, etc., JOHN WILMOTT.

FOCUSSING SCALES.

SIR,—With reference to a correspondent named J. A. Miller and his letter to you *re* lens focussing, I should like to give my practical experience with the scale of lens focussing on the modern camera. A few months ago I purchased a well-known make of camera, 3¼×2¼, D.A. Compur, f/4.5 lens, and, considering myself a new-comer in photography, obtained some good results with one exception. Whenever I had to judge the distance on my camera in many cases I had estimated incorrectly with the result that a good many pictures were spoilt through bad focussing. It surely would be easier and quicker if these distances on lenses were stated in yards instead of feet and so make present-day photography more popular and encouraging than it is at present. This sort of thing is very discouraging to a new-comer with a fairly good price camera.—Yours, etc., G. P.

SIR,—Your correspondent on "Lens Focussing" has raised an interesting point for amateurs.

Personally, I think the ideal thing would be a complete change over to the metric system for weights and measures—as a general standard; but as this is not likely, I consider "feet" markings to be more useful to the general "snap-shotter" than yards, especially as so many hand-cameras are graduated to such fine limits (rendered necessary by the use of larger lenses), such as 3, 4, 6, 10, 15 ft., etc.

After handling various makes of cameras in this country and on the Continent, I have found no difficulty in obtaining perfectly sharp pictures; besides, to gauge one's distance is part of the interest. Things are becoming too mechanical. For specialised subjects, of course, use a built-in "auto. range-finder."—Yours, etc., "ENTHUSIAST."

SIR,—Regarding your correspondence on focussing, surely it is easier to develop the habit of working at two, three or four yards range than guessing at various odd feet shown on a scale.

I have never had the consistent success with foot scales that has attended this "three-point" method. And an examination of novices' results seems to prove which is the more simple and effective.

Cheap cameras, of short focus and comparatively small aperture, do not really need a range-finder if fitted thus.

I quite agree visual focussing is the ideal, with the small twin-lens reflex possibly best. The surprising thing is that manufacturers have taken so long to discover this. Most firms doing amateur printing and enlarging must have noted the inefficiency of the old foot scale years ago.—Yours, etc., A. W. FOSTER.

THE OPTOCHROM TANK.

SIR,—Your correspondent J. C. Jenkin mentions the ease of loading the Optochrom tank, but I occasionally experience difficulty in separating the paper from the film, and if I try the alternative method of tearing off the paper and turning the funnel, I cannot draw the end of the film into the tank, usually spoiling the first negative. I should be interested to hear if Mr. Jenkin has any special method to overcome this.—Yours, etc., P. G. WOODLAND.

The Week's Meetings

The Amateur Photographer and the Law

By E. PICKLES, LL.B.

IN the first place let me confess that this article is inspired by the reply to a reader's query appearing on page 267 of the issue of *The Amateur Photographer* of September 9th, under the heading "Right of Way."

It would require a courageous lawyer to answer a question on photography, and likewise it would be an equally courageous photographer who answered a question on law. What particular difficulty had J. J. G. encountered to spur him to raise his somewhat unusual point in a photographic journal? Had he endeavoured to photograph the forbidden Ann Hathaway's Cottage, or to obtain a "scoop" of some attractive function? And had he been rather peremptorily commanded to pocket his camera on pain of expulsion? It is with the object of assisting those very select members of society who have a hobby in common with my own that this article is written.

The right of the public to the use of the highway (and a public footpath is none the less a "highway") is limited to that of passage and repassage. The primary function of a highway is to offer a convenient and comfortable way of getting from one place to another without committing a trespass, but, in doing so, one is allowed, for instance, to pause for rest or to admire the view, and, presumably, to take a photograph, provided that no obstruction of the highway is thereby caused, or, in other words, provided that the right of the individual is not used in such a way as to interfere with the equivalent right of others lawfully upon the highway.

Although it might be considered bad taste, there appears to be no legal objection to anyone taking a photograph *from the highway* of, say, a family at tea on the lawn. But let the photographer (or anyone else, for that matter) himself step off the highway and through the garden gate, and he immediately becomes a trespasser and liable to—what? Prosecution? No! The trespasser renders himself liable to an action for damages, and an injunction restraining him from repeating the trespass. The damages would be nominal, unless the trespass were accompanied by aggravating circumstances, but the trespasser would almost certainly have to pay the costs of the action, and these might be considerable.

If I, camera in hand, attracted by some rustic scene, were caught red-handed on Farmer Jones's field, I would apologise humbly, offer him a shilling (actually producing and proffering the cash) by way of compensation for any damage which I might have done, and take the shortest way back to the highway. But Farmer Jones knows only too well that all his notices bearing the legend "Trespassers will be Prosecuted" are so many wooden liars.

The second part of the reply to J. J. G.'s query opens a very wide door—the subject of libel. The distinction between libel and slander is irrelevant for the purposes of this article, but, very briefly, slander is perpetrated by word of mouth—a transitory medium—while libel consists of the malicious publication, by some more permanent medium (e.g., a photograph), of a statement or representation which is untrue, and which tends to expose the person of whom the statement or representation is made, to hatred, ridicule, or contempt.

For example, if the recent winner of the Wallace Heaton Competition had borne the slogan "Peter Gurney, Tippler," instead of "Beer is Best," the author of the photograph might conceivably have found himself defending a libel action. There can be no doubt whatever that a photograph could, under certain circumstances, form the subject of a libel action, and apparently it would be of no avail for the unfortunate photographer to plead that he didn't really mean it, and that the camera had lied. The libel would be none the less "maliciously" published.

Some of my readers may possibly have gone to an open-air Shakespeare, or to a sports meeting, armed with the camera and a goodly supply of film, only to see a notice posted prominently on the entrance gate to the effect that no photographs were allowed. The position in this case is governed by contract. The promoters of the show undertake to provide the spectators with a display of some sort, and in return for this they receive an entrance fee, but the matter doesn't finish there. There is nothing to prevent the promoters from imposing conditions to the contract—hence the notices "Keep off the Grass," "Spectators are not allowed on the Running Track," or "No Photographs Permitted." If photographs are taken in breach of this condition, the remedy of the promoters would apparently be an action for damages for breach of contract, and perhaps an order for the delivery up of the offending negatives and prints.

"The A.P." Monthly Competitions

AWARDS FOR AUGUST.

IT is a remarkable tribute to the popularity of "The A.P." competitions that the entries for August, during the height of the holiday season, were as numerous as ever. In all three sections not only were the prints of high merit throughout, but a considerable number of new names appeared from all parts of the world, indicative of the far-reaching extent of the circulation of the paper. The awards are as follows:—

ADVANCED WORKERS' SECTION.

First Prize.—"Harbour Scene," by W. Ecclestone, Cleveland House, Cleveland Street, Shrewsbury.

Second Prize.—"Within the Shadows," by J. H. Clark, 304, Camberwell New Road, London, S.E.5.

Third Prize.—"St. Dunstan's," by Geo. A. Slight, 18, Ewelme Road, Forest Hill, London, S.E.23.

Mounting Prize.—"Queen of the Sea," by Geo. H. Fellows, 160, Byres Road, Glasgow, W.2.

Certificates of Merit.—"Lady with Necklace," by Yahya Arif, De Menashe Avenue, Maadi, Cairo; "Harvest in the North," by James C. Gilchrist, Lanover, Pitlochry, Perthshire; "Longing for a Kiss," by Sorab J. Kharegat, 12a, Cusrow Bang, Colaba Causeway, Bombay.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2, and Class 3 respectively.

Those awarded Honourable Mention are as follows: Yahya Arif (Cairo); (2) J. H. Clark (London, S.E.); Harold R. Clough (Wallasey, Ches.); W. Ecclestone (Shrewsbury); H. Emmett (Northwich, Ches.); (2) Wm. Jackson (Hull); Hilda Jordan (Tring); Arthur Keen (Calgary, Alberta); Emile Laevaert (Brussels); G. E. Oakley (London W.); Mrs. K. M. Parsons (Reading); C. A. Pierpoint (Cricklewood, N.W.); Geo. A. Slight (Forest Hill, S.E.); A. L. Syed (Palanpur, India).

INTERMEDIATE SECTION.

First Prize.—"Over the Hills," by H. Wild, 1, Garden Villas, Heptonstall, Hebden Bridge, Yorks.

Second Prize.—"Boats," by Leslie Towndrow, Heriot, Hatherley Avenue, Great Crosby, Liverpool, 23.

Certificates of Merit.—"Out for an Evening Swim," by C. M. Adcock, Grenehurst Park, Capel, Surrey; "Seagulls," by C. J. Lloyd, 90, South Ealing Road, S. Ealing, London, W.5; "Give us this day . . ." by E. G. Roughton, 63, Havering Road, Romford, Essex; "Lady of Quality," by Eric W. Sykes, Little Orchard, Weedon Lane, Chesham Bois, Bucks.

BEGINNERS' SECTION.

First Prize.—"Paddle Wash," by F. A. Rawley, 42, Ventnor Gardens, Barking, Essex.

Second Prize.—"The Old Staircase," by R. H. Swaffield, 17 Hamilton Road, Bedford Park, London, W.4.

Certificates of Merit.—"A Portrait," by G. V. Billson, The Mead, Old Birmingham Road, Bromsgrove, Worcestershire; "Shadow and Ruin," by P. J. Gorvin, 24, Alice Street, Newport, Mon.; "On a Chinese Screen," by D. W. Morrison, The Asiatic Petroleum Co., Tientsin, North China; "Tadi Collector," by S. N. Muley, Plot No. 50, Tilak Road, Poona, India; "The Calm before the Storm," by C. H. Whitaker, c/o The Asiatic Petroleum Co. (N.C.), Ltd., No. 1, The Bund, Shanghai, China.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLIII.

Mr. H. G. MARTLEW.

From information communicated to our Special Representative.

"IT is twelve years since I first became interested in photography. For four years of that time I played a lone hand and made little progress. Then I joined a camera club, and as a result began steadily to improve—and I still hope to go on improving.

"From the time that I first turned out a presentable print, I have made a point of sending my work to various exhibitions, and subsequently have had pictures accepted at the major shows. I have found that one cannot hope for acceptances every time, but to the beginner I would say, constant endeavour will ultimately meet with success, so do not be discouraged if at first your work does not receive the recognition you think it merits.

"In practice, nearly all my subjects are taken out of doors, and I depend on a $3\frac{1}{2} \times 2\frac{1}{2}$ reflex. The full-sized image on the screen enables me to compose the picture to a nicety, also I can judge the effect of differential focussing. The weight of the camera also makes for steadiness when exposing in the hand, no camera-shake being apparent even when using comparatively slow shutter speeds.

"My time for photography being limited, I often have to depend on my holiday 'bag' for my exhibition pictures. In dealing with a large batch of negatives, my method is to develop four at a time in a dish, combining time and temperature with inspection. Any negative which requires special development can then be easily removed to another dish.

PENSHURST (*Bromoil*). *H. G. Martlew.*

"I do not believe in dealing with too many at one sitting, for I have found to my cost that any attempt to rush matters usually results in spoilt negatives.

"Half-plate prints are then made from the whole of each negative, care being taken to get the best possible straight print on a bromide paper of suitable contrast. A critical inspection now follows, all those with any pictorial merit being selected, and the portion I intend to use marked with a pencil-line. Notes are then made as to any modification I consider necessary in order to bring the print to exhibition standard.

"After-work on the negative is next undertaken, parts which require lightening are treated with dye, and unwanted high-lights subdued by friction with methylated spirit. This work I find tedious, but it pays handsomely, avoiding much after-work on the final print, which is not easily disguised. My next step is to decide on the process most suitable for a successful result. Whenever it can be used to advantage, I have a preference for bromoil, in fact, many of my best efforts are produced in this medium. I consider it ideal when broad effects of light and shade are called for, but if the subject depends on delicate degrees of tone then I use bromide or chloro-bromide.

"I have always felt the urge for self-expression, and endeavour to get individuality into my work. I must confess that the so-called 'modern photography' has little appeal to me, leaving, as it does, nothing to the imagination. My quest is always for a subject which when presented will be capable of raising some emotion in the mind. Such a picture will linger in the memory, and can be enjoyed again and again."

(*A further example of Mr. Martlew's work is reproduced on one of the centre Art pages.*)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE BUTTERFLY," *by Jaroslav Bohacek.*

ALTHOUGH it has little to do with its pictorial value, it was observed that, when viewed at the current exhibition of the London Salon of Photography, this picture created considerable speculation as to whether the butterfly was real and had actually been photographed after alighting on the flower, or if it were one of those manufactured models that so closely simulate the real thing and had been placed in its present position with "malice aforethought."

Most people seemed to think it was the real thing, but, leaving the reader to form his own opinion, there is little doubt that its introduction is the making of the picture. As a study of flowers, it would, perhaps, show not a little merit, but, with the butterfly, something that seems to be alive has been added, and this vitality extends to the impression the picture conveys. Furthermore, it serves as an excellent centre of interest. It does this, first of all, because of the inclusion of the living element; in the second place, on account of its contrast of tone; and, in the third, by reason of its force of placing.

The first consideration is self-evident. As far as the second is concerned, it is a fundamental rule in the arrangement of light and shade that extremes of tone attract the attention. The darks of the wing markings are as strong as any others elsewhere in the picture. The lights are also brilliant, and the pull of the two extremes is united, the contrast causing a considerable concentration of interest. Besides this there is the contrast of the butterfly itself against its setting, which again enforces its attraction. There remains the factor of placing, in connection with which it will be seen that the butterfly is placed on one of the intersections of divisions of thirds and also happens to fall on the diagonal on which the flowers are disposed, *vide* the dotted lines of the sketch.

The strength of the placing on the points of intersection is unquestionable, but it derives a certain emphasis from the line of the diagonal, which, in turn, establishes a connection throughout all the subject elements.

So much, in itself, would be sufficient to ensure a complete and well-balanced composition; but there is an additional feature that makes it even more attractive in that the petals of the centre flower form lines of radiation which provide yet another source of emphasis to the dominance of the butterfly. These lines have the faculty of stressing the significance of the point from which they emerge, and, almost invariably, they lend a valuable sense of order to the arrangement. It is so in this instance, and the composition is rendered very satisfactory and well finished.

And so it has to be. The subject material is very restricted, and, though there is no suggestion of inadequacy, there might easily have been were the subject less effectively disposed. It would not permit any deficiency either in placing or in the arrangement of tone, nor is it likely that any departure from the established form would be so completely successful.

The same completeness necessarily has to extend to the presentment. The print is in a comparatively high key, but within its restricted range the tones are rich and full of quality, the minute patches of dark revealing that intensity of tone that only comes from correct exposure and the full measure of development. The print is one of the bromide type, with a surface between matt and glossy, and one possessing a slight sheen that lends distinction to the subtlety of the delicate gradations which show to perfection on the ivory white base. Its technique is excellent, and, if at all possible, a visit should be made to the show while it is still open—it closes on the 10th October next—with the idea of making an inspection of the original.

It is its high standard of technique—both in the arrangement of the composition and in photographic workmanship—that enables it to convey such a fine impression of luminosity and light.

These qualities lend it an artistic attraction of no little power, and its decisiveness of expression, too, is wonderfully well managed. It also is not without a suggestion of decorative pattern, and it illustrates a class of work that can be practised all the year round and one that need not depend on weather conditions, for it can be essayed either in or out of doors, under natural or artificial lighting, and material can be found in all sorts of objects, from domestic utensils to bric-a-brac and articles of vertu.

Such work, moreover, is invaluable in inculcating an idea of composition and arrangement, and, in the majority of cases, it is easy to repeat an exposure as soon as a mistake is discovered. In fact the picture is a good example of what can be done with simple material in skilled hands.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

A SUBJECT like No. 1 of the prints reproduced on the opposite page—"Light and Shade by the River," by A. S. Bellinger—is not an easy one for a beginner to tackle, as, for one thing, much of its visual attraction depends on colour, and this is lost in a monochrome rendering, and, for another, its range of tone is much beyond the normal and demands special treatment for its successful representation.

Normal and Abnormal.

Its difficulties, too, are increased by the fact that it is seen against the light. Even under the opposite lighting, the shadows under the trees would be more than usually heavy, and the difference between them and the light of the sky would be very wide indeed, but, under a *contre-jour* lighting, the shadows are deeper still and the sky much brighter.

The range of tone is extreme. The contrasts are so great that, unless steps are taken to reduce them, they will be beyond the capacity of the normal printing paper to reproduce. There are two methods of reducing subject contrast. The first is to reduce the development time of the negative, and the second is to employ a printing paper of softer type than is usually chosen. If negatives are developed in a tank or on a roll of film, it is scarcely feasible to curtail development, that is, of course, unless all the subjects are of similar range. If plates are employed and are individually developed, it is a simple matter to make any adjustment that may be considered advisable, and, assuming the degree is correctly calculated, the normal printing paper should produce a print of full and suitable gradation.

Method of Treatment.

But, in these days, film is more generally employed, and plates, more often than not, are treated in a tank. Moreover, it is only the experienced worker who observes the extension of the normal range of subject, and, as a general rule, excess of contrast only becomes apparent after development has been completed.

So that, in cases such as these, the only possible method of treatment is to have recourse to the softer sort of printing paper.

Reference to the print discloses the facts that the sky is deficient in tone and that the darks under the trees on the left are so devoid of gradation that they seem choked up. Overbright skies; a set of tones of too steep a range; choked up shadows; or a combination of them are a sure sign of excessive development; when they occur—and it appears to take some time before the symptoms are recognised—the softer paper should be immediately substituted; and, to get an idea of what a really good print looks like, a visit should be paid to one of the current exhibitions, or a study made of the reproductions on our centre pages.

It is possible that there may be some degree of under-exposure in this case, which would tend to aggravate the fault.

Skies and Filters.

There is, of course, another aspect of the matter in that the tendency of the usual run of plates and films is to record the sky in tones that are relatively too bright. This tendency can be corrected, to a very great extent, by the employment of light filters of suitable characteristics. This is especially the case if used in conjunction with panchromatic emulsions, but an improvement may be expected even with material that is described as isochromatic or orthochromatic.

The adoption of this expedient, however, involves an increase in exposure, and over-development must be guarded against, failing which either the fault will be exaggerated or an effect, usually and incorrectly attributed to over-correction, will make an appearance.

In No. 4, "Sheepstor," by R. Norman Rook, the technical treatment seems just about right. A little more tone in the sky would not come amiss, but exposure and the degree of development seem well judged, and the rendering of the sky approaches the standard that is in mind.

From the artistic standpoint, however, it could be wished that the wall in the foreground had been omitted, for it is not a good feature, and nothing would be lost, and a good deal gained, if a viewpoint looking over the wall had been chosen instead.

Undesirable Intrusions.

A like undesirable intrusion is evident in the foliage on the right in No. 2, "A Village in Bucks," by Joseph Marie. It seems unsupported, and its presence demands an explanation.

It might have been found possible to avoid it by taking the subject from a viewpoint rather to the left, and, if so, it should have been adopted instead. As far as development of the negative or choice of printing paper is concerned, the rendering is quite satisfactory, but the deficiency of sky tone indicates the need for a light filter.

"The Falls, Virginia Water" (3), by W. A. Farley, provides another example of a subject of more than ordinary contrast, and, as in the case of No. 1, the treatment is inadequate. The substitution of a softer grade of printing paper is called for, and should produce a much more harmonious rendering. At the same time, it may be mentioned that, in a subject of this kind, it might be better if the sky were excluded altogether, for it is not an essential element and only introduces a competitive note.

Under-Exposure.

With Nos. 5 and 6, "The Island through the Trees," by A. P. E. Kent, and "Moonlight and Monsoon," by M. V. Fyzee, it is to be feared that a very considerable measure of under-exposure is present, as well as an excess of contrast on account of over-development.

Assuming that an inspection of the negative confirms this inference, no amount of dodging about with different grades of printing paper is likely to be able to provide shadow gradation that has not been recorded, and an improvement in the rendering of the deeper tones can scarcely be expected. Nevertheless, much of the violence of the contrasts could be corrected, and, if the subjects are valued at all, they might be reprinted on a softer type of paper with advantage.

The tree bole, in No. 5, is, however, much too close, and its scale is out of all proportion. A more distant viewpoint is indicated, and it would be wise, as well, to arrange for a greater depth of foreground. "MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

VARIATIONS IN RENDERING.

IT is often possible to render even a simple subject in a variety of ways. Photographs of the most hackneyed subjects are scarcely ever exactly alike, and now and then a time-worn view is presented in a novel form, or under unusual conditions of lighting or atmosphere, so that it at once becomes fresh and interesting.

Let us look at the four illustrations, all different, but taken within a small area of space and a few minutes of time.

Fig. 1 shows the building as a wayside cottage, and also gives some idea of the character of the road. In fact there is more wayside than cottage. Simple as the subject is, it is one over which the beginner is likely to go wrong. He is aware of the bright sunshine, but overlooks the masses of heavy foliage and the deep shadows in the immediate foreground.

Fig. 1.

It is a case for longer exposure than for an open landscape under similar bright sunshine. The exposure in this case was governed by the foliage and shadows, and was full enough to result in the necessary shadow detail coming up quickly and easily so that development could be stopped before the sky and other light parts became too dense and blocked up.

Fig. 2.

In Fig. 2 the variation is brought about simply by making the view horizontal instead of vertical. This has made the cottage more nearly central, and has brought in some more material on the right—not of an interesting character. It would have been the better version had a flock of sheep or something equally appropriate come round the bend of the road, but the appearance of a lorry would be far more likely. I ran into a flock of sheep later on, but the surroundings were deplorable.

I have found from long and extensive observation that the great majority of picturesque wayside buildings still in existence cannot possibly be photographed from the best viewpoint without including a telegraph pole. There may or may not be an advertisement board, a petrol pump, a road sign, or some other modern hideosity, but you can rely on the telegraph pole.

Fig. 3 is a close-up of the building. Note how in the first two versions the trees beyond the cottage tower above the chimney, while in the closer view they have dropped below it. This sort of thing has to be watched when altering the viewpoint, which is bound to make a difference in the relation to each other of the objects included. There might, for example, have been a church tower rising up beyond the

Fig. 3.

cottage in Fig. 1, and its greater height would have been obvious. But an approach to the cottage would cause the tower to sink lower and lower and at last disappear altogether.

Another change in Fig. 3 is that the telegraph pole has been dodged by keeping it outside the picture-space on the right. The possibility of doing this may seem a contradiction of what I just said, but please note that I remarked that it could seldom be dodged from the best viewpoint. This cannot be called the best, as it reveals the disconcerting fact that the end wall has collapsed.

This will not surprise anyone who has studied the construction and material of many "picturesque" old cottages, although some of them stand up remarkably so long as the inhabitants refrain from sneezing. I have watched the disintegration of old cottages and barns when there is no one to continue to patch them up with string and stamp-edging, and a series of photographs is an interesting but rather sad record.

Fig. 4.

A further slight shift gave Fig. 4, where some more trees have been brought in, and the collapsed wall has been skilfully concealed. This would no doubt be the version unhesitatingly selected by anyone wishing to find a purchaser for the building.

It is a first-rate exercise for the beginner to find a subject—it hardly matters what—and try to make as many different versions of it as he can manage. These will result from varying the angle of view and the distance from the subject, and he should study in the resulting prints the differences so caused. It will be all the better if the subject is readily accessible, so that he can extend the variations by photographing it at different times of the year, and under a variety of conditions of lighting and atmosphere. Further variations can be made by different styles of printing, etc., but that is rather a different story.

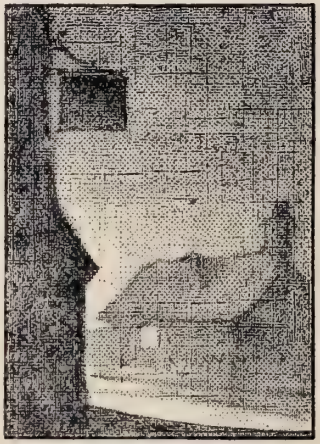
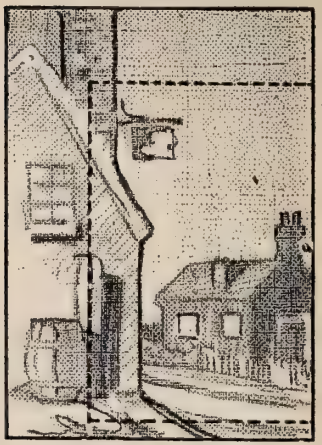
Picture Points

No. 19 (New Series) *by RICARDO*

Dominating Shadows.



WE have already seen and discussed the dangers of allowing the shadows in various subjects to attract too much attention to themselves instead of contributing to the real point of interest. Excessive tone and size contrast, lack of variety of tone in the shadow itself, and awkward and ugly shapes, all these can contribute towards the shadows dominating in the picture.



There is yet another point to be considered and, although it deals largely with still-life photography, it can often occur in other subjects. A quick, comparative glance at the two illustrations will show immediately the effect of having the background too near one of the objects in the group when that particular object is not the real point of interest. Because of the closeness, the shadow is very strong and attracts the attention away from the motif, the fish in the foreground. When the background is removed to a greater distance, the shadows

wayside cottage, and [illegible] give a very generous exposure in order that we can allow.

A Point on Night Photography.

FOR photographers who are not already hardened to the rigours of night work, this time of the year is ideal for practising this fascinating branch of photography. It is not yet too cold and there is a slight misty atmosphere about that is very valuable for this kind of subject.

The most usual fault made by beginners in this subject is that too many lights are included in the picture, whereas it is essential to pay more attention to the contours or shapes of masses to compensate for the natural loss in modelling and drawing, through the lack of general lighting. It is advisable

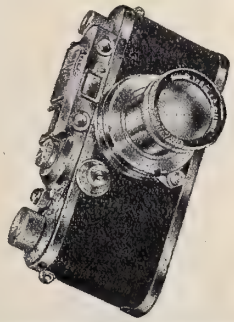
Part-Exchange of Miniature Cameras

If you are considering the purchase of a camera such as the Contax, Nettax, Leica, Rolleiflex, Exakta, or Super Ikonta, etc., and wish to offer your present miniature camera in part-exchange, we suggest your getting in touch with us.

As miniature camera specialists (we are the only firm dealing exclusively in miniature cameras and accessories), our turnover is quicker and we can consequently afford to give higher than the usual part-exchange allowances. At the moment we urgently require second-hand Leicas (particularly Models III and IIIA), and are prepared to give a little higher than even our usually high allowances in respect of these.

Please mention this advertisement when replying.



R. G. LEWIS
The Miniature Camera Specialist
202, High Holborn, LONDON, W.C.1
(*HOLborn* 4780.)

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents, not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Societies Then and Now

By SIGURD MOIR.

The following article contains much information that will be appreciated by all interested in the Society movement. Minor pitfalls are indicated and a healthy basis of development—particularly applicable to modern societies—is touched upon.

IN a certain country house, where an amateur film unit has recently been spending its leisure week-ends, there is an antiquated timepiece with a large pendulum that swings low beneath the clock dial. Occasionally, the pendulum catches the eye as it swings to the right or to the left; and the eye never fails to observe the change of direction as the pendulum comes to the end of a swing.

I am reminded of this when I consider the changing policies of amateur ciné societies. They swung into being with large memberships, some professional assistance, and no very convincing idea of what they were to do. To-day, their pendulum has changed its direction; smaller memberships, the ability to exist without professional "guidance," and at least an intelligent, purposeful outlook are the characteristics of surviving organisations.

Mistakes.

The original societies failed for two main reasons: they tried too closely to copy the output of professionals, and they admitted into membership large numbers of people whose interest was solely in the acting side.

Even at that time, it was obvious to some of us that these were mistaken notions. If we are to be afflicted with professional films (which were then at their worst), we argued, by all means let us leave their production to the commercial people—who alone have adequate resources for their creation. And somebody was tactless enough to point out that all the enthusiastic play-actors could be utilised only by employing them at the rate of a hundred or so in each film!

Changes.

Although various social activities kept the societies going for some time, many of the promising workers disappeared, and it became evident that certain changes had to be brought about.

The first change in the right direction came almost eight years ago, when H. P. J. Marshall forced a policy for serious work through an advanced group known as the Film Guild of London. However, Marshall left England and ultimately became first assistant to S. M. Eisenstein. His departure was a great blow to a developing movement. The Film Guild of London fell to pieces—and although some societies (like the Apex) were spending all their time and resources on making films, those films were no better than the average professional output and, quite frankly, should never have been made by progressive amateurs.

The next change came two years after this, when the Civil Service Ciné Society—always a "non-social" society—announced its intention of concentrating upon abstract, documentary and experimental films. Such changes were always followed by the resignation of members who had joined solely for acting experience, but there was a compensating gain in the quality of output. From producing films like "Speculation" and "Contraband," the C.S. Ciné S. created the outstanding abstract, "Thirst," "Retrospect," and a number of lesser documentaries.

Then the attention of other societies was turned to true amateur endeavour. The East Anglian Film Guild produced "Blue Elegance." Horace Hughes and Geoffrey Collyer (of the B.A.A.C.) reflected the change that was coming over amateur intentions in their very fine "Night Scene," whilst Bolton amateurs then produced what I consider to be the finest film of its year in "Saturday" (direction, G. N. Booth).

Attendances.

About this time came the greatest falling-off in attendances—not because resigning members were less serious, but rather because no serious society can carry large memberships and still manage to keep all its followers actively occupied on film work. In several instances, resigning members actually formed the nuclei of fresh bodies, most of which carried forward the new spirit. Thus were born Avant-Garde Productions, the Sub-standard Film Society, the West Essex Film Society, Film-Art Group (makers of "Beyond This Open Road"), and the North London Film Society (producers of "Jubilee.")

Attendances at these and the surviving representatives of the original Society movement do not fluctuate over brief periods. They are constant because there is really interesting work for everyone to do—constant because there are no "puppet" members and no

The amateur cinematographer in search of topical action subjects at the present time should not overlook the autumn effects and riders in the Parks. Early morning is the best time for these shots.

members who have to be pressed to turn up at the next meeting.

Club Programmes.

It is not denied that there are still two or three societies which have yet to reach this happy pass. To them I say, look to the club's programme.

Every programme should include lectures and early tuition on real cinematography; every successful club nowadays places strong emphasis on this point. Real cinematography is concerned more with cutting and the selection of worth-while subjects than it is with the purely photographic details of image pictorialism and definition. Indeed, these things are far better appreciated when seen as lantern slides or "stills"—and since all cinematographers are consciously or unconsciously aware of it, the fact must be responsible for a great deal of dissatisfaction.

Then there are still signs of an ill-considered attachment to the professional cinema. Men like John Grierson, Bernard Vorhaus, Andrew Buchanan, Alberto Cavalcanti and other producers of intelligent shorts are tremendously helpful in shaping the course of serious amateur cinematography. Their assistance is amongst the finest things that have come to the Society movement, but not every professional director spells his name Alberto Cavalcanti.

With regard to the club's practical work, little can be said in this place. Successful societies now make all their films with a purpose—hence the Bristol "Survey" film, the Hull "Safety First" effort and the great anti-war production now being made by Associated Societies. "Stand up and Breathe!" is a "purpose" film—comparable only with the similar production "Beyond This Open Road."

Finance need be no stumbling-block in societies controlled by intelligent leadership. Funds for most of the films referred to were forthcoming either before or after the filming, whilst in cases where the necessary expenses cannot come from outside—well, the treasurer will not have to empty his coffers to pay for a mere two-reeler.

Selection in Filming and Cutting

By M. A. LOVELL-BURGESS.

MUCH of your ultimate success or failure in cinematography will depend on the attitude you have toward it at this moment; upon whether you regard the cinema as a sort of extension of the theatre or the novel, or whether you acknowledge it to be a new art medium.

There are two schools of thought on the subject of cutting which arise from those two possible attitudes. There are those who dismiss cutting and montage as a necessary and, to a certain extent, skilful putting together of various parts to make a whole, the length of each scene being already fully determined by its own merit and context. Others regard this assembly, or composition, of shots and sequences, with its possibilities of *tempo* and selection, as in itself creative. Cutting, they argue, is no mere substitute for scene shifting. It represents in the film the natural selectivity of the mind.

Selection is, after all, a process which is continually going on in people's minds, whether they know it or not. As a rather crude example, imagine a group of people invited to a drawing-room concert, including a social climber, a crook, a detective, a countess and a music-lover. The social climber's attention would be concentrated on the countess, and what she said and did; the crook would be mainly concerned with the countess's pearls, the detective would be watching the crook, and the music lover would be fathoms deep in the violin concerto.

Have you ever noted the sub-conscious selection of your own mind at any ordinary unemotional moment? You are at this moment receiving some bodily impression from texture or position, or contact with desk, table or book. There is probably a clock ticking away somewhere but, although you are not deaf, you would have to listen before you heard it. Out of the corner of your eye you are aware of a more or less large field of light and objects, but at the moment your attention is concentrated upon the printed page before you.

Then there is the inward, running commentary of the mind, made up not only of reasoned, consecutive thought, but also of emotions, instincts, prejudices, associations, visual images, yet all building up, by process of selection, into one steady attitude of mind and will. It is said that when people lose their reason in solitary confinement it is because of this absence of a stream of sensations to break the monotony.

How is the amateur cinematographer to make visual images convey words, with all their associations, the sense of smell and touch, which are so powerful, muscular sensations, sound with all its tones? All this has to be translated into vision, which becomes, while we gaze at the film, the sum total of all our bodily impressions.

What have you already in your audience upon which you can work? In them you have association, with which to kindle their imagination and emotion. You, for your part, have visual images, light and shade, the power to speed up or to slow down those visual images, and selection to emphasise significance by means of camera angles or close-ups. And it is by the final cutting, by the juxtaposition of differing shots, in lengths varying in accordance with the mood or rhythm of the scene, that the whole can be clearly stated, in a continuous, logical order.

The film, so far as the amateur cinematographer is concerned, runs in perfect silence, like the mind with its unspoken commentary, and it is for the camera to record, and for you, in cutting, to convey the rich jostle of moods, impressions and emotions which make up the stream of consciousness.

ACTION SUBJECTS for the AMATEUR CINEMATOGRAPHER

The Amateur Photographer and Cinematographer's Diary of Forthcoming Events.

FORTHCOMING EVENTS DURING OCTOBER, 1936.

DATE.	EVENT.	PLACE.	DATE.	EVENT.	PLACE.
Oct. 1.	Pheasant shooting commences.		Oct. 13–16.	Racing	Newmarket.

"The A.P." Monthly Competitions

PRIZES AND RULES.

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

(I) For Advanced Workers.

This class is open to all amateur photographers.

FIRST PRIZE.—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10×8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6×4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon (see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the September competition is to-day, September 30th, and for the October competition, Saturday, October 31st.

The Awards in last month's Competition will be found on page 334.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3⅜×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

37. NEGATIVE REDUCERS

2.—Ammonium Persulphate.

THIS reducer is suitable for contrasty and hard negatives, as it has the characteristic of acting first on the dense areas, thereby reducing the contrast.

Only one solution is necessary:—

Ammonium persulphate	150 grs.	34 gms.
Water	10 oz.	1,000 c.c.
Sulphuric acid (optional)	5 min.	1 c.c.

Use at above strength and make a fresh solution for each time of use. It is advisable to slightly acidify the solution, as it makes the action more regular and certain.

The negative should be quite free from hypo and be soaked for an hour in water before reducing.

No reduction will take place until a milky colour is seen to emanate from the image, when the action should be continued for a further 20–30 seconds. Examine the negative quickly at this stage, as the action then becomes rapid. When reduction is complete, rinse the negative rapidly in water and place in a weak hypo bath for just one minute. 1 oz. hypo to 20 oz. water. The negative is then washed for 15 minutes.

If the hypo solution is not available, a quantity of 5 per cent solution of sodium sulphite is an effective stop-bath.

This reducer is not always constant in action, and should no signs of milkiness be seen after two minutes, wash the negative again for a minute and immerse in a fresh solution of persulphate.

38. TEMPERATURE EQUIVALENTS

Fahrenheit	Centigrade	Fahrenheit	Centigrade
212	100	90	32.2
210	98.8	85	29.4
205	96.1	80	26.6
200	93.3	75	23.8
195	90.5	74	23.3
190	87.7	73	22.7
185	85	72	22.2
180	82.2	71	21.6
175	79.4	70	21.1
170	76.6	69	20.5
165	73.8	68	20
160	71.1	67	19.4
155	68.3	66	18.8
150	65.5	65	18.3
145	62.7	64	17.7
140	60	63	17.2
135	57.2	62	16.6
130	54.4	61	16.1
125	51.6	60	15.5
120	48.8	55	12.7
115	44.1	50	10
110	43.3	45	7.2
105	40.5	40	4.4
100	37.7	35	1.6
95	35	32	0

CONVERSION TABLES.

To convert Centigrade (C) into Fahrenheit (F): Degrees C×9÷5+32=Degrees F.

Example.—What is the Fahr. equivalent of 30° C? 30°×9=270°; 270°÷5=54; 54°+32°=86° F.

To convert Fahrenheit into Centigrade:—Degrees F−32×5÷9=Degrees C.

Example.—What is the Cent. equivalent of 70° F? 70°−32°=38°; 38°×5=190°; 190°÷9=21.1° C.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Formalin.

I want to harden prints before glazing them, and have bought some formalin. To what extent should I dilute it? Should I harden between developing and fixing? E. M. K. (Woodford.)

You should take 1 oz. of the formalin solution as bought and add 9 oz. of water, and this can be used over and over again. You should not harden the prints until the end of the final washing, when you should place them in the solution and keep them moving for about four minutes, transferring them straight to the slabs without further washing.

Developing Film Packs.

Why is it that film packs require a longer development time to reach normal contrast compared with roll films with a similar emulsion?
J. E. M. (Gourock.)

Because of the pressure required in a film pack to keep all the films flat, whether it is a full pack or only one or two, there is a risk of abrasion on the emulsion as it is pulled over the roller at the back. To obviate any likely damage to the emulsion an extra coating is laid on the light-sensitive side and in development this necessitates a slightly longer time for the developer to penetrate and to reach normal contrast. About 25 per cent increase in development time should be given.

Plate Mark.

Can you please explain exactly what is a plate mark and its purpose on the mount?
M. G. (Glasgow.)

The expression "plate mark" was originally used to describe the effect made on an etching or gravure print when the pressure required caused the plate to sink into the paper and leave a rectangular depression, the plate mark, surrounding the illustration. A similar mark can be made on photographs or on the mounts to give them a finish, but it requires a little experience to accomplish successfully.

Copyright.

What is the procedure of obtaining copyright of photographic prints for protection against illegal reproduction? B. T. D. (Barnet.)

The British law of copyright does not require you to make any registration of any kind, neither is it necessary to print the word "copyright" on the back of the print. The copyright of any photograph you take automatically becomes yours from the moment the negative is made, and no one should make a reproduction from a print of that negative without your consent. If you are taking the photograph on someone else's instructions or orders, whether or not there is any monetary consideration, the copyright belongs to the person who ordered it and, as above, his sanction is necessary before a reproduction is made.

Enamel Ware for Acid Hypo.

Considering the comparatively high cost of large earthenware dishes, I am tempted to invest in the cheaper enamelled metal type, but am wondering whether they are suitable for acid hypo and for the usual chemical solutions.
T. D. (London.)

Provided that the enamelled surface is sound and is not chipped or cracked to any great extent, you will find that it will not have any harmful effect when using acid hypo and the usual chemical developers. It is advisable that the solutions are not left for any length of time in the dishes, which should always be rinsed out with clean water after use. It is a very good plan to keep a special dish for the hypo and another for the developer to ensure thorough cleanliness.

Matt Emulsions.

What advantage is there in using matt emulsion plates over the usual type, for general work?
A. T. (Blackpool.)

A matt emulsion is particularly useful where retouching is necessary. The matt surface provides a suitable surface for the retouching pencil, and does not require a coating of retouching medium first. Although the surface looks somewhat like ground glass, it has no noticeable grain in enlargements, but has a slight softening effect that is very suitable for portraiture and some types of pictorial work. It is also claimed that a matt emulsion prevents halation more than ordinary emulsions.

Photographic Caricatures.

How can I make a caricature print from a straight portrait negative? M. E. W. (Brighton.)

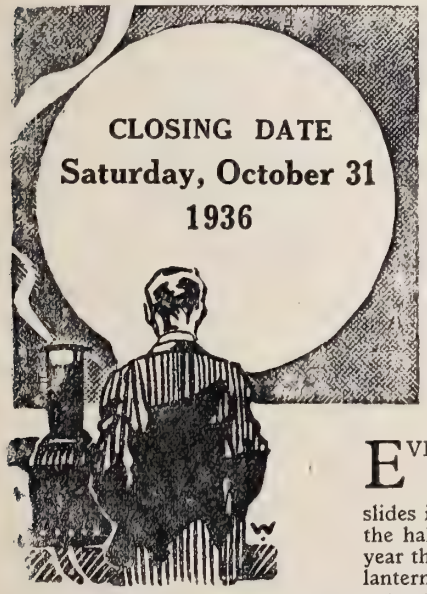
There are several methods, but the easiest way is to put the negative in the enlarger and instead of placing the bromide flat on the easel raise it here and there to give the effect. The distortion is somewhat limited to the flexibility of the paper base and it will be necessary to pin it down in several places to keep it in place and perfectly still throughout the exposure. The negative should be focussed on a point half-way between the highest and lowest planes of the paper and stopped down sufficiently to give sharpness all over. The disadvantage with this method is that the distorted effect cannot be seen until the print is developed and viewed in the "flat."

Uranium Intensification.

Does the uranium intensifier require bleaching as with the other intensifiers? What is its characteristic and advantage, if any, over the others?
H. Q. F. (Thornton Heath.)

There is no bleaching required as it is a single-solution intensifier and only strengthens the image by virtue of toning the entire silver deposit an orange-brown colour. This colour necessitates a longer printing time. Wash the negative thoroughly after fixing and immerse in the following solution:—

Potassium ferricyanide ..	¼ oz.
Uranium nitrate	¼ oz.
Glacial acetic acid ..	2½ oz.
Water	25 oz.



Allow the negative to remain in the solution until it reaches the desired depth of stain. If it is too dark, prolonged washing in plain water will lighten or remove it entirely, or by adding a little ammonia to the water the process can be hastened.

Altering Lens Focus.

I have heard that it is possible to shorten the focal length of a Tessar lens and similarly constructed lenses by removing the front component. If this is so, does it alter the aperture and definition? G. M. L. (Eastbourne.)

By removing the front component of the Tessar lens you will certainly decrease the focal length and in theory it should result in a slightly larger aperture. The definition, however, leaves much to be desired and only by stopping down to a very small stop, such as f/22 or smaller, can anything like satisfactory definition be obtained, and then only in the middle of the negative. Where time is of no object and great magnification is required, and where the bellows extension is somewhat limited, this will be found to be a good makeshift, but it will not compare with the performance of the entire lens for good all-round quality.

The Amateur Photographer & Cinematographer

ANNUAL
Lantern-Slide Competition
1936

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in " The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in " The A.P." prize set which circulates throughout the British Isles can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that the awards are made to individual slides and not to sets ; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of " A.P." Prize Slides should hasten to do so, and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Saturday, October 31st.

Classes and Subjects.

CLASS I.—Landscape with or without figures, sea subjects and river scenery.

CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.

CLASS III.—Architecture, interior and exterior.

CLASS IV.—Flowers, fruit and other " Still-Life " subjects.

CLASS V.—Natural History subjects.

CLASS VI.—Lantern slides in colour (not hand-coloured).

CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{4} \times 3\frac{1}{4}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards ; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful ; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return ; neither can slides be returned which are not *accompanied* by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Saturday, October 31st. The slides must be well packed and addressed, " Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

CAMERAS AND LENSES

BELL'S Clearance Sale.—Press, Miniature, Cine Cameras ; no reasonable offers refused.—45, Newington Butts, S.E.11. (Rodney 3773.) [0037

CAMERAS Exchanged and Bought ; largest stock in S. London ; all materials ; Pathescope agents ; special attention.—Humphrys, established 1840, 269/273, Rye Lane, London, S.E.15. [4791

ALLENS.—6×6 Latest f/3.5 Automatic Rolleiflex, £18/10 ; E.R. Case, 22/- ; Proxar Lens, 27/6 ; Filter, 10/6 ; Latest Lens Hood, 10/6 ; Plate Adapter, 19/6 ; Two Slides in case, 25/- ; Pressure Plate, 11/6 ; Focussing Screen, 11/6.

ALLENS.—6×6 Rajar Enlarger, f/4.5, £7/15 ; Weston Electric Exposure Meter, £3/15 ; Super Ikonta, 8 or 16 on 2B, Tessar f/4.5, R. Comp., £14/10 ; Ensign Roll Film Reflex, Ensar f/4.5, £3/19/6.

ALLENS.—Nagel Rolloroy, Elmar f/3.5, Compur, case, lens hood, £8/10 ; 3¼×2¼ Ihagee Auto. Ultrix, f/4.5, D.A. Compur, £4/15 ; Foth-Derby, f/2.5, £5/17/6.

ALLENS.—For Generous Exchange Allowances. —168, Oldham Rd. (Please note number), Manchester, 4. Phone, Collyhurst 2980. Closed 7 p.m. [0087

GRAFLEX 5×4, Aldis f/4.5, 2 double slides, tank, £4/10 ; N. & G. ¼-pl. Slides wanted.—D. G. Whitaker, Sunnyside, Disley, Stockport. [4962

3¼×2¼ Ica Folding Reflex, f/2.7 Zeiss Tessar, focal-plane shutter, 3 slides, F.P. adapter, all in leather case, £25 ; Piccolette V.P. Camera, f/4.5 Zeiss Tessar, Compur shutter, offers.—Freeman, 4, Parliament St., Harrogate. [4963

NEWMAN-GUARDIA 3¼×2¼ Sibyl, Cooke Aviar f/4.5, 6 D.D. slides, F.P.A., leather case, accessories ; first-class condition, £10.—Loader, 24, Chapel Rd., Worthing. [4968

LATEST Contax I, Sonnar f/2, as new (cost £41), ever-ready case and filter, complete, £28.—Box 9389, c/o "The Amateur Photographer." [4974

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.
For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

FLIGHT
The AIRCRAFT ENGINEER AND AIRSHIPS

The First Aero Weekly in the World

All the latest developments in connection with aviation are recorded in the pages of "Flight."

Illustrated descriptions of new aircraft, aero engines and equipment, British and Foreign, appear regularly, as well as practical articles giving the latest information for Club members and amateur pilots.

"Flight" is the leading authority on aviation. It contains Royal Air Force news, and deals with the work of R.A.F. Squadrons, with Private Flying, and with Commercial Aviation, Airlines, and Airports.

A special staff of highly competent aerial photographers ensures that "Flight" contains the finest photographs of aviation in all its aspects.

COMPLETE WITH STRETCHERS.

Also in finest Silver Surface **17/6**

COMPLETE WITH STRETCHERS.

Packed in neat cardboard box. Carriage 1/3 extra.

NOTE THESE POINTS

This new screen must not be confused with cheaply made screens. The surface is very durable and of finest quality. The woodwork is not stained, which soils the hands, but is polished in eggshell cellulose. The stretchers are of a new design and allow for fixing the screen quickly without having to remove the thumbscrews.

SPECIAL: 52 in. × 40 in. Screen in silver surface only. Price..... **21/-**

COMPLETE WITH STRETCHERS.

Only obtainable from

HAVE YOU SEEN THE LATEST EXAKTA REFLEX CAMERAS ?

With delayed action, automatic slow-timing, and accommodation for roll films, plates and film packs. They are the world's best small cameras, and give the largest pictures of all the "Miniatures."

The New Voigtlander Range-finder Bessa is here, and takes 8 or 16 pictures on 3¼×2¼ film. Incorporated is the famous Voigtlander trigger release and attached filter. No other 3¼×2¼ range-finder roll-film camera equals it.

Our Service is the most comprehensive ever offered

IF

The **NEW**

"SUPRAMIN"

Finest of Fine-grain Developer.

The ONLY Non-poisonous, Non-staining Paraphenylene Diamine Developer.

NEW FEATURES—only obtainable from

"SUPRAMIN"

- Compensates for variations in exposures and produces uniform gradation.
- Can be used repeatedly. One 36-oz. carton will develop 4 to 6 Leica films.
- Requires no increase of exposure.
- Keeps perfectly in solution.
- Gives still finer grain.
- Negatives can be intensified and retain finest grain.

COMPLETE Development Chart. No increase of price.

To make 72 oz... **4/-** Smaller size to make 36 oz... **2/4**

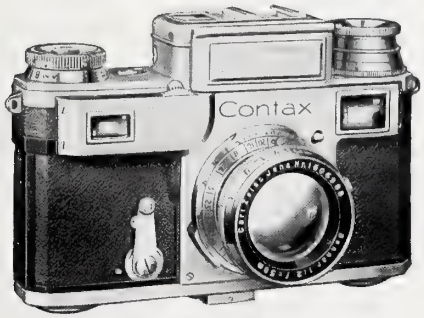
CALL and SEE US AT OUR NEW SHOP

Here you will find the biggest range of Cameras, Ciné Apparatus, and Home Talkie Apparatus in the country, as well as a still more comprehensive service than ever before. Why not give us a call when in the West End? We shall be pleased to show the latest and best of everything without the least obligation for you to purchase.



LEICA MODEL IIIa

Every Leica shot is successful. You can take distant shots of animals or birds, close-ups, portraits, speed subjects or snapshots at night. The Leica measures only 5½ in., yet will take up to 36 pictures with one loading. Double or blank exposures impossible. Five minutes to learn—call and let us demonstrate. Generous allowances on your present apparatus. Literature free on request.

Leica Model IIIa, with f/2 Summar lens **£43 0 0**

Nine monthly payments of £5 0 4.

NEW ZEISS CONTAX III

Splendidly improved and fitted with built-in photo-electric exposure meter. As usual, we have the **first** models ready for immediate delivery.

F/2.8 Zeiss Tessar	**£55 17 0**
F/2 Sonnar	**£63 0 0**
F/1.5 Sonnar	**£78 5 0**

FAST AMONG THE FASTEST . . .

Even man's swift chariot of the sky is brought to a complete "standstill" by the amazing speed of Selochrome Roll Film.

Quicker than thought, Selochrome "sees" and seizes the picture, and—dull weather or bright—reproduces it with all faithfulness and truth.

"HARVESTERS" BY E. OLHOPPÉ"

REAP A RICH HARVEST OF PICTURES THIS AUTUMN

WITH A Leica CAMERA

The Leica photographer is not dependent on sunshine—the big light-transmitting capacity of the Leica lenses permits snapshots even in the dullest weather. Leica is the camera par excellence for all-the-year-round photography—indoors and out.

Ask any good-class photographic dealer for a demonstration or write for descriptive literature to

WE HAVE THE BEST "MINICAMERAS"—NEW AND USED

HERE ARE SOME SPECIAL FACILITIES EXCLUSIVE TO WALLACE HEATON CUSTOMERS

COME TO OUR EXHIBITION
DURING OCTOBER
OF ZEISS MINIATURE CAMERA PICTURES
With Contax and Contaflex.
In our Galleries at
127, NEW BOND STREET.

If you want the finest possible results, send us your films for development by our "MICROLUX" and "INDIVIDUAL" Systems.

MICROLUX yields the finest grain of all, but requires that films be over-exposed.

Films processed in this way receive the most careful handling possible.

Price per 36 exposure strip, **4/6.**
18 exposures (35-mm.), **3/6.**

Ask for descriptive MICROLUX leaflet.

Free "All Risks" Insurance on Miniature Cameras, value £10 or over, whether bought from us or not.

"Leica News" free monthly to all registered Leica owners.

Free Instruction Cards for Leica users.

Exposure Cards free to all Miniature Camera users.

Special fine-grain developing service for miniature film.

Automax (Regd.) 3½×2½ enlargements from miniature negatives, 2/- dozen.

Colour films for miniature cameras.

All the latest books on miniature cameras in stock. State what make your camera is and we will tell you the book which gives you the best advice on its uses.

BARGAINS IN USED APPARATUS.

A PRIZE-WINNING CHANCE FOR ALL—IN WALLACE HEATON'S

OPEN COMPETITION

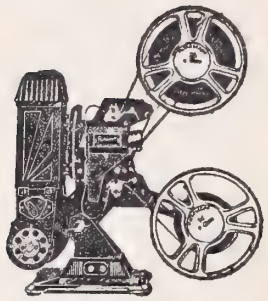
FOR GOOD PHOTOGRAPHY
BY ANY AMATEUR WITH ANY APPARATUS

Here's a new competition in which the beginner stands as much chance as the experienced photographer. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives, except for simple "spotting" to eliminate "pinholes," etc., are eligible. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement, as always looking best in the eyes of the judges. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25 which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment.

Acceptance of the rules is a specific condition of entry.

No retouching, faking, or combination printing—Just honest photography.

21/- WEEKLY PRIZE



COUPON *which must be affixed to the back of each entry.*
WALLACE HEATON LTD.
"OPEN COMPETITION."
October 7th, 1936.

No restriction of size and type of camera. ANY subject can be submitted.

£25 FIRST PRIZE

ADDRESS YOUR ENTRIES TO "OPEN COMPETITION"

WALLACE HEATON LTD., 127, New Bond St., LONDON, W.1

Every keen Camera User should be sure to get

The AMATEUR PHOTOGRAPHER

DIARY

and Handbook for 1937

This useful little handbook contains in addition to the usual diary pages—one week to the page—over fifty pages of facts and formulæ for the keen camera user. Information is given on developing, fixing baths, mountants, and finishing negatives and prints. Numerous reference tables dealing with hyperfocal distances, enlarging, screen distances for lantern projection and exposures are included, as well as sections for exposure records and personal memoranda.

Size 3⅛×5⅛ inches, well printed, neatly and strongly bound in leather cloth, with back loop pencil and round corners.

Granville PRODUCTS PRODUCE BETTER PICTURES

Whether used by the novice, the advanced worker or the professional, GRANVILLE PRODUCTS ensure the maximum results with the minimum effort. Every day we receive testimonials from new customers who are surprised and delighted—surprised at the quality obtained at such a low price—delighted with the ease in which such perfect pictures are obtained. If you are just beginning, start right with " GRANVILLE " ; if you have years of experience, change to " GRANVILLE." You will never change again !

"THE GRANVILLE GUIDE"

This new publication is a superb 16-page de luxe illustrated edition. Specially issued for users of Granville Photographic Products, it contains up-to-date working instructions, formulæ, and many useful articles specially written by our own experts. A complete list of all materials is also given, including many new lines. If you have never communicated with us before, **write to-day for your copy.** Applications should be addressed to: PUBLISHING DEPARTMENT, Granville Gulliman & Co., Ltd., P.O. Box 3, Leamington Spa.

If you have previously communicated with us, please do not apply, as a copy will be sent to you.

TOPICS of the Week

WHILE it seems only yesterday we were drawing the attention of our readers to the latest date for submitting entries to the big London autumn exhibitions, to-day we have to remind them that only a few days remain before these shows will be over. Saturday of this week (October 10th) is the closing day for both the Royal Photographic Society's exhibition and the London Salon of Photography. Each is a notable show that should certainly be visited by everyone interested in the progress of photography, and both have attracted large numbers of visitors already. While there is still time, readers who have not yet seen these fine collections of pictures should endeavour to do so. The "Royal" is at 35, Russell Square, W.C. (Bloomsbury), and the Salon is at 5a, Pall Mall East (near Trafalgar Square).

Faithfulness.

In retrospect the impression that remains in one's mind after many visits to the autumn exhibitions is that of a convincing wholesomeness. If a composite picture could be made of all the exhibits it would be more or less a restful landscape. And this is all so different from the world we inhabit—a world with a new scare every day, a world which has its ear to the ground for the sound of marching feet, and its eyes in the sky for the approach of hostile aeroplanes, a world living amid the rumours of war. The exhibitions—the London Salon perhaps particularly—were a recall to the dear, peaceful, delightful things which are always the same and yet always revealing new attractiveness. It is astonishing how faithful pictorial photographers are to the morning dew, and the April shower, and the sunlit boats on shadowed waters (to take three titles from the first nine pictures in Pall Mall East), and in so being they are probably rendering no little service towards peace and sanity.

SIGNS OF THE SEASON.

The gulls are coming inland again and are to be found in increasing numbers in the parks, etc. This is a sign of the end of "summer time" at the coast, and provides the amateur photographer with good material for pictorial snapshots nearer home than hitherto.

Approximating the Colour Processes.

A sign of the progress towards perfection of the colour processes is afforded by the way in which the results with different processes become well-nigh identical. There was a time when, on seeing a colour picture, one said at once that it was by a particular process, and on seeing another, that it was by a different process, simply because of the difference in rendering of certain colours, the green being a trifle metallic, or the red edging towards purple. Recently we saw a collection of lantern slides in Dufaycolor, and a cinematograph film in Kodachrome. Both showed the same subjects, including some ladies in period costumes, and it was notable that the results with the one process were indistinguishable from the results with the other. This is the more remarkable because the processes are so different, the one being subtractive and the other additive.

Universal Standard for 16-mm. Sound Films.

At an international conference held at Budapest during September an agreement was reached with regard to the standard to be adopted for 16-mm. sound film. The following countries were represented at the conference: Germany, Denmark, Belgium, France, Italy, Hungary, Czechoslovakia, Sweden, Holland, United States of America

and Great Britain, and it was unanimously agreed that, from the date of the meeting, the national organisations of each country represented would conform to the 16-mm. standards adopted by the Society of Motion Picture Engineers of America (known as the "S.M.P.E. Standard"). There will be no difficulty so far as this country is concerned in accepting this decision, as it will be recalled that, in February last, Lord Riverdale arbitrated on the question, and decided that this country should adopt the S.M.P.E. standard. When this decision was announced the hope was expressed that the outcome would be that the S.M.P.E. standard would become the universal standard. It is gratifying, therefore, to be able to report that this result has been achieved so quickly, as it will have far-reaching effects throughout the section of the film industry associated with the use and development of 16-mm. sound films.

The Weather was too Good.

Usually photography, if it is defeated at all by the weather, is defeated by bad weather, but one case has just been put on record in which the weather was not bad enough for photography. It is a communication about the last work of the late Dr. Kund Rasmussen, the famous Danish explorer, whose premature death was such a blow to geography. Almost his last piece of work when exploring the south-east coast of Greenland was to engage a small group of film photographers in the Cape Farewell district to make pictures of the kayak men and hunters who live there. It had been Rasmussen's wish to show their magnificent skill and absolute fearlessness by a series of film pictures of the kayaks in stormy weather. But the party whom he left behind met with the curious misfortune that they could not get weather bad enough to enable them to complete their task. In spite of the time of year and the fact that Cape Farewell is one of the world's stormiest corners, the wintry wind simply would not blow, the tempest showed no sign of coming, and, disappointed, the party had to return to Copenhagen without the results they sought.

"The Amateur Photographer" EXPOSURE TABLE—*October*

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured, or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m. double these exposures. From 7 to 8 a.m. or from 4 to 5 p.m., treble them.

Subject.	Ordinary.	Medium.	Rapid.	Extra Rapid.	Ultra Rapid.
Open seascapes and cloud studies	1/25 sec.	1/40 sec.	1/75 sec.	1/100 sec.	1/120 sec.
Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes ..	1/15 ,,	1/25 ,,	1/45 ,,	1/60 ,,	1/75 ,,
Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes	1/6 ,,	1/10 ,,	1/20 ,,	1/25 ,,	1/30 ,,
Landscapes in fog or mist, or with strong foreground, well-lighted street scenes ..	1/4 ,,	1/6 ,,	1/12 ,,	1/15 ,,	1/20 ,,
Buildings or trees occupying greater portion of pictures, river scenes with heavy foliage	1/2 ,,	1/3 ,,	1/6 ,,	1/8 ,,	1/10 ,,
Portraits or groups taken out of doors, not too much shut in by buildings	2 secs.	1½ ,,	1 ,,	1/2 ,,	1/3 ,,
Portraits in well-lighted room, light surroundings, big window, white reflector ..	6 ,,	5 secs.	3 secs.	2 secs.	1½ ,,

As a further guide we append a list of some of the best-known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

AUTUMN—Weaker Lighting, Lower Temperature

In the following article some points that should have attention by amateur photographers at this time of the year are dealt with.

THE coming of the autumn, with the lessened power of the sun, and lower temperature, brings points for the consideration of every amateur photographer, particularly those who have only started this year and have founded their knowledge on the photographs they have taken during the summer months.

We have known of cases where the standard of work produced became lower because the photographer, accustomed to working under summer conditions, has not noted the lessened power of the light. This, while not appreciably less to the eye, has a reduced photographic value, as reference to any exposure meter or reliable exposure table will show.

Lighting.

The photographer who uses an exposure meter will find that his exposure problems are solved, provided, of course, that the meter is properly employed. Those workers who are still in the beginner stage, and hitherto have had no exposure troubles, owing to their work having been done in good light with modern films of considerable latitude, will do well always to employ some form of meter or calculator for autumn and winter photography.

The photographer who is equipped with a camera fitted with a lens of small aperture will find that, with the fastest of films, snapshot exposures still produce good negatives during the brighter hours of the day, but late in the afternoon or early in the morning under-exposure is likely if " snapshot " exposures are made.

The use of panchromatic material, with its high sensitiveness to yellow and red, will, however, increase the length of the snapshotter's day, although the cessation of " summer time " has shortened it in another way.

The late afternoon light in autumn becomes definitely yellow in character. This will render ordinary films almost useless for rapid exposures, but will not affect panchromatic material.

Many photographers use plates and films of medium speed for summer work. Autumn calls for more speed, and it is the custom of a great number of serious workers to change over to material of super speed. If the photographer doubts his ability to use such material through the greater care that must be exercised with regard to dark-room manipulation, it will mean longer exposures, and possibly a tripod will be necessary if the subjects contain a large proportion of shadow.

In all cases very great care must be taken not to under-expose, as some of the best subjects at this time of the year contain a large proportion of shadow.

While on the subject of lighting it is well to remind the beginner that some of the successful summer subjects, if available, may be even more attractive under autumnal lighting conditions, and often display startling differences. Landscape subjects, woodland scenes and the like will be found to be very different, through the lower position of the sun, while still greater differences will be found in the case of architectural subjects. Everywhere there is a difference in the lighting, the contrasts are less sharp, and the sunshine has a softer character.

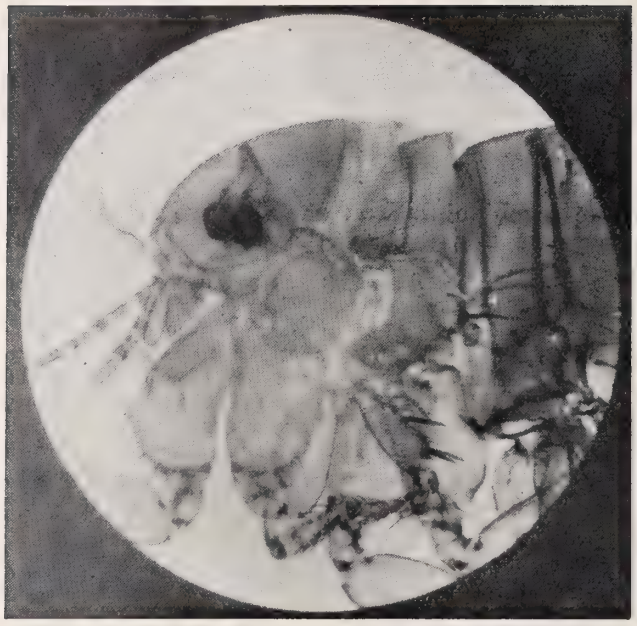
Lower Temperatures.

Those photographers who employ tank development, including the growing army of small-camera users, will not need to be reminded of the importance of ensuring that solutions are of normal temperature. A low temperature during the night will cause a definite fall in temperature also of developers, etc., while the same result will be noted on a cold wet evening, and at various other times.

Care must be taken not only to allow for an increased time of development through the lower temperature, but also to see that the solution is not too cold for effective working. Hydroquinone, for example, loses activity at lower temperatures than 50° Fahr. It is a good custom, although not general, to test the developer when making bromide prints at this season of the year. Too cold a developer may result in prints which lack depth and vigour, and also have poor colour.

With regard to this question of temperature it is well to point out that the best course to pursue is to keep the solutions, and the water that is to be used for making up developers, in a warm room for some hours prior to use, or to adopt some means of warming the dark-room.

It is of little or no use to add warm water to the developer, because the solution speedily falls in temperature again. For example, pouring developer into a tank of cold metal will cause a drop of as much as 5° Fahr., and the same will happen if the developer is poured into a large cold dish. For warming the developer, and maintaining it at a constant temperature, the most simple plan is to stand the dish on a couple of bricks that have been warmed for an hour or two near a fire, or in the kitchen oven. A suitable thermometer is really a necessity.



[An alternative method of warming the developer will be found described on another page (" Hints and Tips ") in this issue.—ED.]

The Effect of Damp.

At the present time of the year the photographer will also have to be on his guard against the several possible causes of defective negatives through damp or atmospheric conditions. It is very necessary that apparatus should be kept dry, especially lenses. It is also necessary to exercise care in order to safeguard plates and films, as well as printing papers, from the same injurious influence.

Cold weather conditions may cause the formation of moisture on the lens, and especially if the latter is taken from a cold atmosphere into a warmer one. Contact with the hand, when setting the stop or the shutter, may for a few seconds have the same effect, and if such a deposit of moisture is not seen it will mean negatives of poor definition, if not a complete blur.

Regular inspection of the glass surfaces is therefore essential, with careful cleaning should this be necessary. If the deposit, almost imperceptible at first, is allowed to remain, it will accumulate and form a tarnish difficult to remove. This comes sooner than may be thought possible, and especially in a smoky or chemical-laden atmosphere of a large town or city. The same applies to lenses and condensers of enlarging apparatus kept in cold dark-rooms.

Portrait of a Flea. About 4,000 times life size.

Photomicrography Simplified

By BERNARD BILLINGS.

CAN you photograph the hairs on a flea's leg? If you were asked such a question, the probability is that you would dismiss it as outside your capabilities. Even if you had a camera and a microscope, the chances are still that you would regard the problem as being outside your scope. Yet given almost any sort of camera and practically any make of microscope, it is possible to take what may be termed the grosser sort of photomicrographs, for the ultra-microscope is outside this article. After all said and done, the proposition resolves itself into recording on to a sensitised emulsion what the eye normally sees when looking down a microscope.

The simplest form of apparatus consists of a camera adapted to the eyepiece of a microscope. Fig. 1 shows a thirty-year-old five-shilling "Brownie" thus fitted to the eyepiece of a Swift microscope. The front of this camera was made of cardboard (as indeed most of this excellent little camera was!) and it is removable. All that has to be done with this and similar cameras, is to make a new front, interchangeable with the standard one, which will hold the camera firmly on the eyepiece, due regard being paid to the central fit of the lens hole. Portions of this new cardboard front may have to be cut away so that access can be made to the shutter release and time control. The illuminant used in this case was, at first, daylight reflected through the microscope mirror, but I have latterly been converted to electric light as being more constant.

The interior shell of the camera, which normally holds the spool mechanism, was removed temporarily in order to check the focus, because the eyepiece must be a little distance from the camera lens; in other words, the lens is not in the same position as one's eye might be, and even if it were, it cannot accommodate as can the human eye. Therefore, first look down the microscope and visually focus the object. When all is sharp, attach the camera, minus its shell, and verify whether the object is still in focus where the roll film receives it. This is achieved by inserting a piece of ground glass or tracing-paper in the correct position. It will be found that a slight turn one way or the other has to be given to the coarse adjustment of the microscope. Note carefully the amount and direction of this. We will call it the "compensating adjustment."

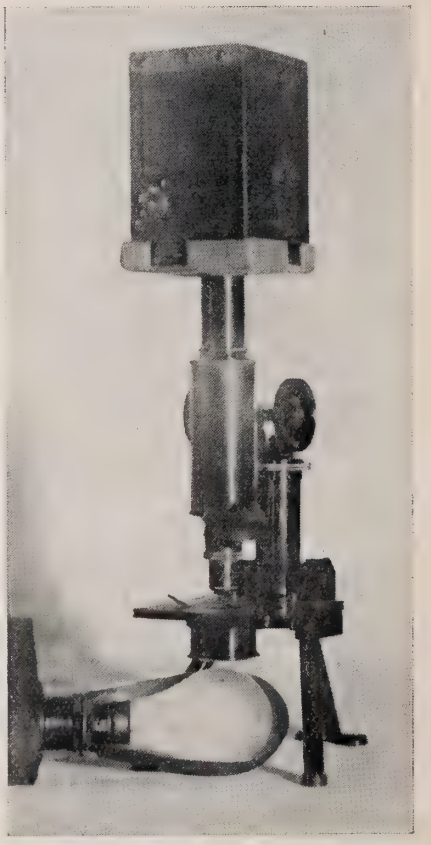


FIG. 1. *A cheap box camera can be used, as shown above.*

After these simple preparations, all is plain sailing. The microscope slide is put into position and focussed by viewing down the tube. Then the camera, now loaded, is placed on the microscope, the compensating adjustment is effected and the exposure made.

For those who possess other types of cameras, apparatus a little more elaborate is required—but not so elaborate that it cannot be made at home. It consists, as shown in Fig. 2, of a baseboard, on which is fixed the microscope, the latter preferably in its horizontal position. Some device should be incorporated whereby the microscope always registers in the same position. In my own case small saw-fretted pieces of plywood ensure this. A rest for the camera to stand on at one end and another at the other end for the electric light complete the essentials. It is important to work to a centre line and to the line of the optical axis, but this needs no more than usual care.

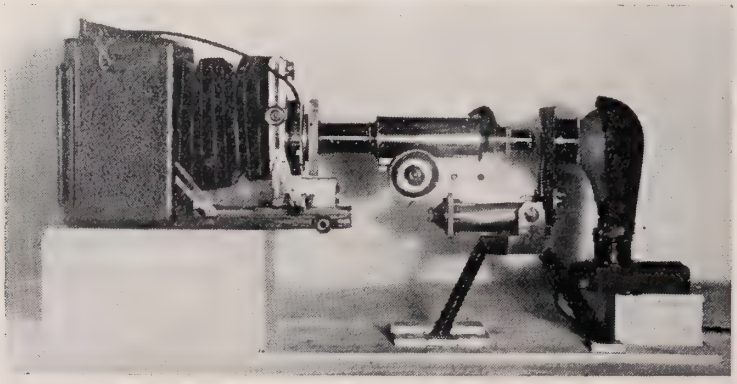

FIG. 2. *Normal arrangement of camera, microscope and illuminant.*

The crux of the whole thing is the adapter which connects the eyepiece of the microscope to the camera lens. The easiest way of doing this is to cut out four discs of cardboard—two of these have their internal holes the same diameter as that of the eyepiece, the other two having internal holes the same diameter as that of the camera lens. The thickness of the cardboard depends entirely on the lens flanges under consideration. The two pairs are glued one on top of the other, so that the result is a complete disc which has a central hole—one side fitting the lens and the other side fitting the microscope.

(*Continued on next page.*)

For perfect enlargements from Miniature Negatives use an

ENSIGN MAGNAPRINT

Super Speed Condenser Enlarger

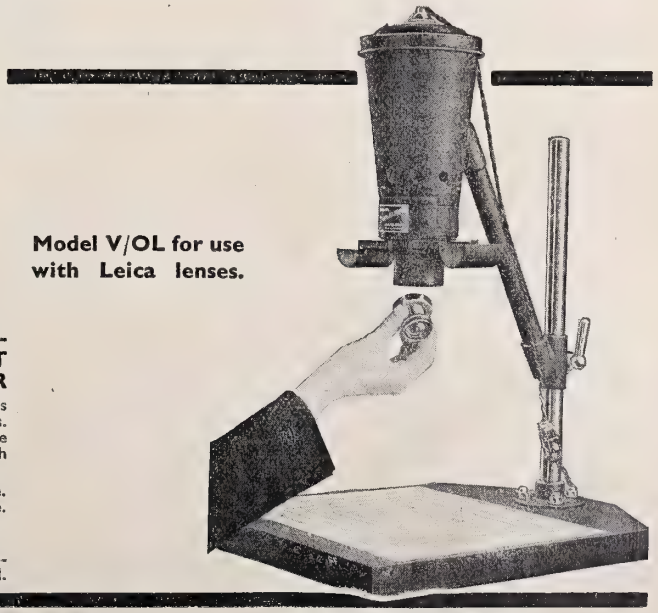
Model AV/O with Automatic Focussing

EVERYONE who wishes to enjoy their hobby to the fullest extent, should experience the fascination of enlarging their miniature negatives with a Magnaprint. The condenser diffused lighting system employed produces perfect quality grainless enlargements from miniature negatives speedily and with a minimum of trouble.

STANDARD MODELS

Model V/O. For all miniature negatives, enlarges up to 15×10, with Ensar f/6.3 Enlarging Anastigmat **£4 15 0**

Model V/OM. As above, with Magnar f/4.5 Enlarging Anastigmat **£6 10 0**



Model V/OL. For use with Leica lenses. As above but without lens. Including special carrier for Leica or Contax negatives **£4 10 0**

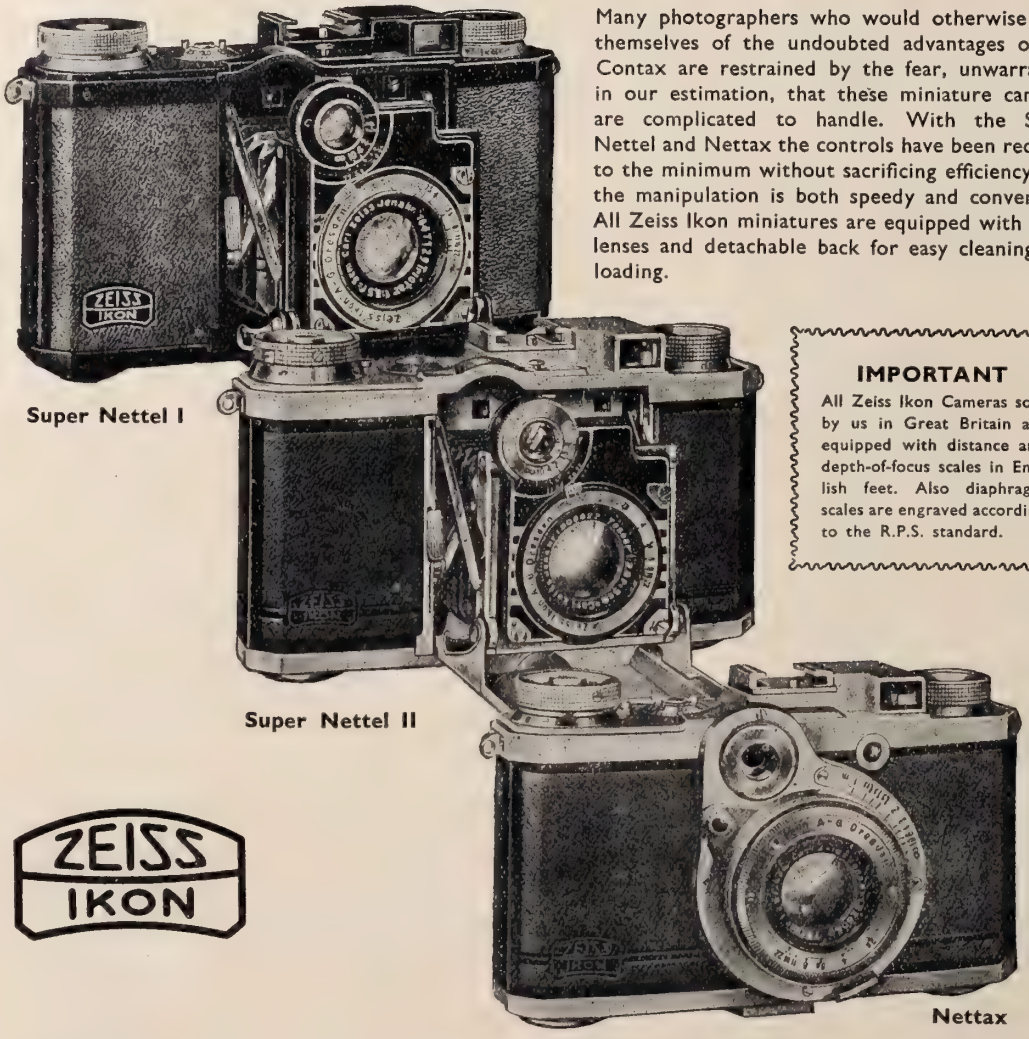
AUTOMATIC FOCUSSING MODEL

AV/O. For all miniature negatives, enlarges up to 15×12, with Dallmeyer f/4.5 Enlarging Anastigmat **£8 15 0**

Ask your dealer for a copy of "The Fascinating Art of Enlarging" by Ensign, or write to

ENSIGN, LIMITED, High Holborn, LONDON, W.C.1

Model V/OL for use with Leica lenses.



ENSIGN "SPECIAL ASSORTMENT" PACKET OF BARNET BROMIDE ENLARGING PAPER

Enables you to use different grades, tones and surfaces without buying separate packets. Contains 12 sheets 1/1-plate size Double Weight paper consisting of 3 sheets of each of the following finishes :—

Cream Crayon Smooth Natural Surface.
Cream Crayon Rough Natural Surface.
Smooth Ordinary White.
Medium Rough White.

PRICE 3/- Each variety of paper separately packed and marked.

Simplicity in operation is the keynote of SUPER NETTEL & NETTAX

Super Nettel I

Super Nettel II

Nettax

Many photographers who would otherwise avail themselves of the undoubted advantages of the Contax are restrained by the fear, unwarranted in our estimation, that these miniature cameras are complicated to handle. With the Super Nettel and Nettax the controls have been reduced to the minimum without sacrificing efficiency, and the manipulation is both speedy and convenient. All Zeiss Ikon miniatures are equipped with Zeiss lenses and detachable back for easy cleaning and loading.

IMPORTANT

All Zeiss Ikon Cameras sold by us in Great Britain are equipped with distance and depth-of-focus scales in English feet. Also diaphragm scales are engraved according to the R.P.S. standard.

ZEISS IKON

SUPER NETTEL I

has one control which winds the film, winds the shutter, and sets the shutter speed either before or after winding, and in the centre of which is located the shutter release. It is therefore true to say that all the important controls are contained together. The shutter is speeded to 1/1,000th second and Time. The folding baseboard protects the Zeiss lens when out of use, and focussing is performed by coupled distance meter, and an automatic depth-of-focus scale is provided.

With Zeiss Triotar f/3.5 ..£18 12 6
With Zeiss Tessar f/3.5 .. £22 5 0

SUPER NETTEL II

is somewhat similar in design to the Super Nettel I, and the manipulation is also similar. The Super Nettel II is, however, elegantly finished in chromium plate, and special attention has been given to detail in finish and construction. It is pre-eminently a miniature precision camera de luxe. The Super Nettel can truly be said to be the ideal camera for those miniaturists not requiring lens interchangeability

With Zeiss Tessar f/2.8....£28 2 6

NETTAX

The controls of the Nettax are very similar to those described under Super Nettel I. Provision, however, is made for interchangeable lenses, and in addition to normal lenses of 2-in. focal length a wide-angle lens of 1½-in. focal length and a lens for long distance work of 4½-in. focal length are available. Focussing is performed by a coupled distance meter, and the metal focal-plane shutter is speeded to 1/1,000th second. The finish is in chromium plate.

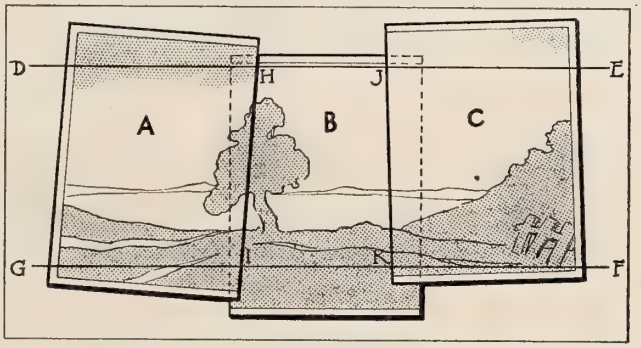
With Zeiss Tessar f/3.5....£29 5 0
With Zeiss Tessar f/2.8....£32 0 0

Zeiss Ikon products are obtainable from most high-class dealers. A new publication, "Unfettered Photography," describing all Zeiss Ikon miniatures, post free on request.

ZEISS IKON LTD., 11, Mortimer House, Mortimer Street, LONDON, W.1

Although Fig. 2 shows a Sanderson camera *in situ*, I can fix, in its stead, a reflex, for which, of course, I have made its own lens adapter. I prefer the reflex for many reasons; one can compose the resulting picture so much easier, and, in the case of living specimens, capture the right moment for exposure. This last factor prompts me to add that the baseboard with its attachments can be used vertically, either by screwing to a wall or supporting by means of brackets, and this brings the microscope stage into the horizontal position.

With this home-made fit-up, I have been able to photograph many slides from which lantern plates have been prepared to illustrate lectures. I use a 60-watt frosted bulb and the exposure, say, for the flea's head shown in the illustration on the previous page, was four seconds, H. & D. 350, the microscope having a No. 1 eyepiece and a two-thirds inch objective. Ordinary F values, it is almost unnecessary to remark, have no value under these considerations, but after a few experimental exposures it will be found fairly easy to gauge the correct time to give from a visual inspection of the brightness of the image in the eyepiece. Even a ciné camera can be installed to record movements of microscopic life, but in this case a more elaborate fitting is necessary and a more powerful illuminant will be required, but both are matters that can be easily dealt with by any enthusiastic amateur who is also a "handy-man." The results will well justify any expenditure of time and trouble spent in setting the apparatus.



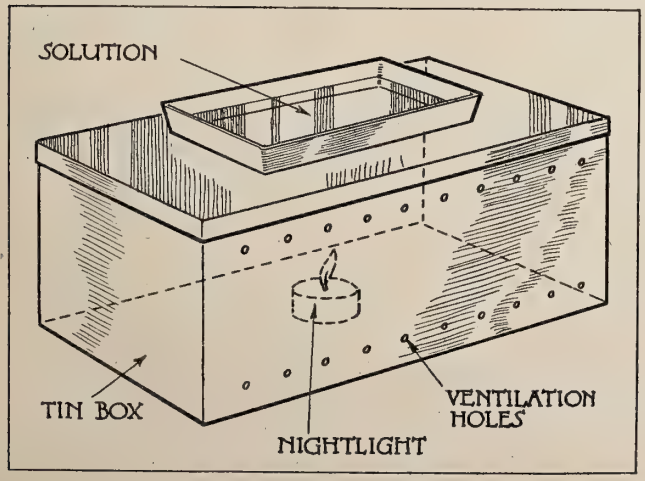
Readers' Hints, Tips and Gadgets

MOUNTING PANORAMIC VIEWS.

MANY amateur photographers must, at some time or another, have taken two or more photographs of a scene with a view to joining them to form a panoramic view, and experienced difficulty in mounting the finished prints to form a continuous view and in concealing the joins. The following method is both simple and effective, and quick in operation.

Suppose that the three prints, A, B, and C, are to be joined together, and because of the tones of the prints it has been decided to place A and C both over B, as in the diagram.

First trim off the white borders of A and C, which interfere with the continuity of the whole, and practice placing A and C correctly on B. Then paste B very lightly on a sheet of rough paper (newspaper will do) and in a similar manner affix A and C in their correct positions over B. The prints have to be detached afterwards, so the minimum of paste should be used; a small border of paste near the edges should be sufficient to hold them while they are being cut as a whole. The prints and the paper to which they are attached can now be treated as a single sheet from which a small rectangle is to be cut, and the trimming lines, DE and FG can be marked and cut, and the ends of the result squared up. The prints and paper are again cut through, this time along lines slightly to the left and right of HI and JK respectively. A is now cleaned up by removing the paper backing and the piece of B adhering to it, B and C are treated in the same way, and the three pieces should fit flatly together. It will be seen that, however carelessly the cuts near HI and JK were made, the affected edges will be bound to join perfectly, since they were both cut by the same stroke. When the whole is mounted, the joins should be scarcely apparent, provided the original prints were



of similar tone and quality. To the worker who does not mind exposing two negatives where he would normally expose one, the confidence of getting good results which the above method inspires opens up new fields of work and does away with the need for a wide-angle lens.

R. B. JONES.

A SIMPLE METHOD FOR WARMING THE DEVELOPING DISH.

FEW simple and cheap methods of keeping developing solutions warm in winter have been published. Electric immersion heaters are expensive, a larger dish of warm water surrounding the developing dish is awkward in use, and the warm water must be constantly replenished to maintain the temperature.

For some time I have used a simple piece of apparatus which keeps the developer at a suitable working temperature in the coldest weather without attention.

This apparatus consists of a large flat tin inside which a nightlight is kept burning. The developing dish is placed on the lid. The tin should be at least four to five inches deep and the lid should be large enough to accommodate the dish comfortably. Two rows of small holes, for ventilation, are punched round the top and bottom of one or two sides of the tin; the exact number necessary and their size must be decided by experiment. If the light goes out after a few minutes, more holes must be made or the existing ones made larger.

No fogging of slow ordinary plates or bromide paper need be feared from the very small amount of light which escapes this light is non-actinic towards these materials.

The side of the box that is pierced with the holes should be turned towards the wall, and if too much light is reflected an opaque shield, such as a piece of blackened tin, should be fixed inside the box, near the nightlight, to cut off the rays of light on that side.

One nightlight will usually be found sufficient to keep the developing solution in the region of 65° Fahr., and will last for several hours.

C. H. GILES.

Autumn

By CLARENCE PONTING.

The Autumn Border.

THE prevailing atmosphere of autumn is a great asset to the garden photographer who likes to take his subjects *in situ*. Even such commonplace things as a trailing growth of virginian creeper, a climbing rose, or a dew-bespangled spider's web, isolated from the usual mundane background by an ethereal morning mist, have provided many an exhibition picture.

Dahlia. "Ullswater."

Nowadays, with ultra-rapid films and plates, sensitive to all colours, no difficulty exists in obtaining the correct rendering of the autumn tints of foliage in monochrome.

The autumn flowers also have a charm of their own. The large, flaunting flowers of the dahlia, carried on long, arching stems, make very pleasing subjects for the camera, either when growing on the plant, or when cut and "posed" in a vase. The perennial asters or Michaelmas daisies offer a wide selection, all being artistically spaced along a decorative stem, and in many cases give an effective "line" when the sprays of bloom weigh down the stalks springing from the base of the plants.

Another plant which gives decorative sprays of secondary blooms in autumn

Polygonum baldschuanicum.

is *polygonum baldschuanicum* (the climbing knotweed, or Russian vine). This rampant-growing flower produces long racemes of bloom that droop earthwards from its support, and are seen to advantage against a light morning mist background.

Out of doors, an exposure meter should be used, and a tripod becomes a necessity, as the lens must be stopped down for detail, and the exposure—even with a fast pan. film—may run into seconds, especially if a filter is used.

Dahlias. "Jersey Beauty."

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

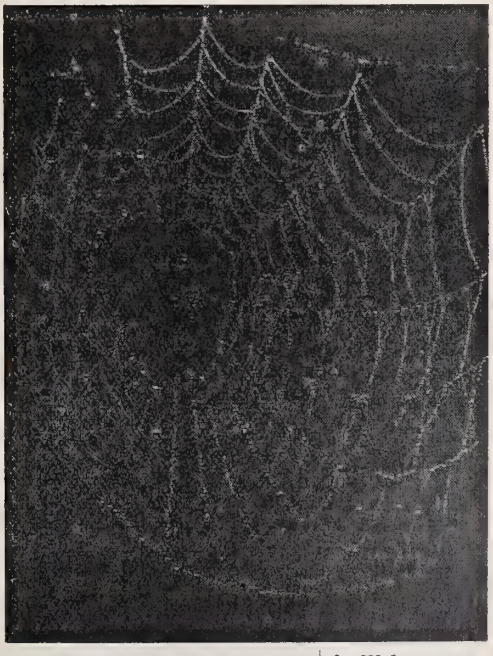
n the Garden

Although the autumn flowers referred to will, in certain circumstances, give a decorative design in the open, and will produce a result worthy of the exhibition wall, all lend themselves to picture-making when cut and photographed indoors. The business man, who is unable to reach home in time to photograph the flowers in their growing positions, will appreciate this fact. Cut autumn flowers lend themselves to decorative treatment when arranged in vases packed with damp sand, or their stems held in position by thrusting the end of the stalks in a large lump of Plasticine.

The indoor exposure may take seconds, or minutes, according to the lighting employed. Some wonderful effects of light and shade may be introduced by arranging two or three sixty-watt pearl electric lamps above and at the side of the flowers. Or the now popular photoflood lamps, which reduce the time of exposure, may be used. My preference is for magnesium ribbon, a cheap and reliable form

An Autumn Morning in the Garden.

Asters. "Margaret Ballard."



of artificial light which can be controlled to give desired effects of lighting. With most forms of artificial lighting hard shadows are produced. But with magnesium ribbon, if kept on the move, no shadows form. If they are needed the ribbon is burnt in one position, or only slightly moved (to prevent the formation of hard shadows) whilst burning. Very little is needed, even when the lens is stopped down to f/11, usually from 12 to 16 inches.

Backgrounds may be coloured mounting papers, where half-tones are required; black velvet for an even, jet-black ground; or white blotting-paper for a dead-white background. These backgrounds, pinned to a large sheet of card, can also be used out of doors to isolate a group of flowers from a "busy" natural background.

White or red-coloured flowers are generally better rendered when pictured against black velvet. Pinks and intermediate shades give a better foliage and stem rendering against a piece of grey paper.

Panchromatic materials may be used for very deep red or yellow flowers, but with artificial light I find that orthochromatic plates and a ×4 filter give almost equally good results. Curiously enough, a filter increasing the exposure four times when used in daylight, only requires double the quantity of magnesium ribbon. Why more photographers do not use this ribbon I can't quite understand. You can buy one ounce for the same price as one photoflood lamp, and it will suffice for several hundred exposures. Modern sensitive material makes this ribbon one of the most useful adjuncts for artificial-light photography, especially when stunt lightings are desired.

No doubt a good many photographers will do at least some of this autumn work in colour, and, thanks to modern progress in colour processes, this is reasonably simple, and highly effective. For lantern slides particularly it is a good idea.

Morning Dew on Spider's Web.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Zeiss Ikon have just issued an attractive new booklet, entitled "Unfettered Photography." It is remarkably well produced and illustrated with some excellent examples of pictures made with the Zeiss miniature cameras. It is printed on art paper throughout, and the text is written in a pleasing non-technical style. We commend it to the attention of our readers, who can obtain a copy free on application to Zeiss Ikon, Ltd, 37–41, Mortimer Street, London, W.1.

A photographic party will again join in the Southern Railway's ramble on Sunday, October 11th. Lewes and the South Downs will be visited. A special train leaves Victoria at 10.8 a.m. and arrives back in London at 8.35 p.m. Return fare 4s. Leader, Mr. A. E. Daly.

The latest winner of the Wallace Heaton Weekly Competition was R. T. Cook, 176, Crompton Road, Handsworth, Birmingham, 20, to whom an award of 21s. has been made. Readers will find all details and full particulars regarding the Wallace Heaton competition in our advertisement pages.

A film show of sub-standard amateur films is being given at the Conway Hall, Red Lion Square, Holborn, on Saturday October 17th, under the direction of the Brondesbury Ciné Society. An attractive programme is being provided, and the whole of the proceeds will be devoted to a fund to provide cinematograph apparatus for wounded ex-service men at Queen Mary's Hospital, Roehampton. As the cost of providing this apparatus, films, screens, etc., will be approximately £250, readers who are interested should endeavour to attend this display and possibly contribute to the fund. Two shows will be given, at 4.30 and 8 p.m. Admission to reserved seats by ticket only. Tickets are 2s. 6d. and 3s. 6d., and are obtainable from Mr. B. Ludin, 134, Notting Hill Gate, W.11, or 100, Chamberlayne Road, N.W.10.

An attractive syllabus of fixtures for next season has been published by the King's Heath and District Photographic Society. Subjects useful for the novice have, in particular, been concentrated upon. If any readers, within this district, who are not already members of a society, are interested, they will be welcome to this society, and full particulars will be forwarded upon application to the Hon. Secretary, Mr. L. P. Lowenthal, "Wayside," 37, Hazelhurst Road, King's Heath, Birmingham, 14.

Lost! In the train between Preston and Manchester, on September 25th, a Contax camera (lens, Sonnar, No. 1655422). If any reader can help to trace this camera will he please communicate with Mr. B. Lohse, at 28/29, Bedford Place, London, W.C.1.

An attractive and beautifully produced book on modern pictorial photography has just been published by The Fountain Press. It is entitled "Photography and the Art of Seeing," and is by Marcel Natkin. A number of fine full-page illustrations in photogravure by well-known workers are included and the letterpress is not only instructive, but is most effectively presented—in many cases with explanatory diagrams that add considerable value to the analysis of the pictures reproduced. It is a book that every picture-maker should obtain and study. The price is 10s. 6d., and it is sold by The Fountain Press, 19, Cursitor Street, E.C.4.

Ilford Portrait Panchromatic film is the subject of a new leaflet issued by Ilford Ltd. It is strikingly illustrated and well demonstrates the outstanding qualities of this fine new material for the photographer. A copy will be sent free on application to Ilford Ltd., Ilford.

The John Ruskin Camera Club commenced its winter session on Tuesday, September 29th, at the Walworth Men's Institute, Beresford Street, Camberwell Gate, S.E.5. The club is well equipped, and instruction is given by Mr. W. Alan Wilson. Readers in this neighbourhood should apply to the Hon. Secretary, Mr. A. E. Boniface, 5, Hillingdon Street, Walworth, S.E.17, for all further particulars.

A Leica camera was left in the 3 p.m. train from Waterloo to Sherborne on September 17th. The owner's name and address were in the ever-ready case. The police at Sherborne, Salisbury and Exeter, the Stationmaster at Sherborne and the Lost Property Office at Waterloo were notified without effect. The number of the Leica (III) is 170268, with Elmar lens f/3.5, No. 290237. Will any reader or dealer to whom the camera is offered kindly communicate with Mr. Alan H. Todd, 20, Upper Wimpole Street, W.1.

Exhibitions and Competitions — CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, October 31. Rules in issue of September 30.

Wallace Heaton "Open Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

XVme Salon International de Photographie de Bruxelles.—Open, May–October. (M. Maurice Broquet, Secretaire du Salon, Rue du Sceptre, 77, Brussels.)

Salon International de Fotografica de Madrid. (Sr. or Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

XXXIe Salon International D'Arte Photographique de Paris.—Open, October 3–18. (M. E. Cousin, Secretaire de la Société Française de Photographique, 51, Rue de Clichy, Paris (9E).)

South African International Salon.—Open, October. (Hon. Secretary, Johannesburg P.S., P.O. Box 7024, Johannesburg, South Africa.)

Royal Photographic Society Annual Exhibition.—Open, September 12–October 10. (Secretary, R.P.S., 35, Russell Square, London, W.C.)

Fotoclub Zagreb, Fourth International Salon of Photography.—Open, October. (Fotoclub Zagreb, Masarykova II, Zagreb, Yugoslavia.)

London Salon of Photography.—Open, September 12–October 10. (Hon. Secretary, London Salon of Photography, 5a, Pall Mall East, London, S.W.1.)

Brighouse Public Library, Museum and Art Gallery. Exhibition at the Smith Art Gallery.—Open, September 26–October 23. (Chas. W. Roberts, Public Library, Museum and Art Gallery, Brighouse, Yorks.)

Lincoln Camera Club.—Open, October 15–November 12. (Miss E. Redfern, 146, Burton Road, Lincoln.)

Third Canadian International Salon of Photographic Art.—Open, October 23–November 15. (Exhibition Secretary, Canadian International Salon of Photographic Art, National Gallery of Canada, Ottawa, Canada.)

IV International Hungarian Exhibition.—Open, October 24–November 9. (Secretary, Magyar Amatőrfényképezők, Orsz. Szövetsége, Budapest VII, Erzsébet-körut, 9, Hungary.)

Twenty-ninth Scottish National Salon.—Open, February 20–March 13; entries, January 23. (J. J. Robertson, Hon. Salon Secretary, Art Gallery and Museum, Perth.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

MINIATURE CAMERAS

We are the only firm in Great Britain specializing exclusively in miniature photography. Leicas, Contaxes, Rolleiflexes, Exaktas, Super Ikontas—we have every model, lens and accessory always in stock. Our MINIATURE CAMERA REPAIR SERVICE is unique, and once again we are the only people undertaking exclusively the processing of miniature films. We claim that specialist service is best.

SOMETHING NEW

FOR LEICA OWNERS. The new Leitz quick-wind attachment is now in stock, and actually on sale. The quick winder is essential for Press, sports and theatre photography—in fact, for all rapid-action work. Price, black finish, **£3 7 6**; chromium finish, **£3 14 0.**

New miniature camera accessories are always first to be seen at our showrooms.

HEROTAR POLAR SCREENS.—The new Herotar polar screens, the principle and method of operation of which was fully described in last week's *Amateur Photographer*, are now in stock. The prices are as follows:—

£4 7 6
£2 15 0

A WRITTEN GUARANTEE OF MECHANICAL AND OPTICAL PERFECTION ACCOMPANIES EACH OF THE FOLLOWING USED CAMERAS. WE SUGGEST A CAREFUL COMPARISON OF THE APPARATUS DESCRIBED BELOW WITH THAT OF EQUIVALENT EQUIPMENT OFFERED ELSEWHERE.

LEICAS:

Leica Model II, chromium, f/3.5 Elmar, ever-ready case. As new £20 10 0
Leica Model II, black, f/3.5 Elmar, ever-ready case. As new £19 10 0
Leica Model II, black, f/3.5 Hektor, ever-ready case. As new £21 10 0
Leica Model I, f/2.5 Hektor lens, non-interchangeable model. Good condition £11 11 0
Leica Model II, f/2 Summar lens, in rigid mount, case. As new £25 10 0
Leica Model I, f/3.5 Elmar, non-interchangeable, case £8 8 0
Leitz Thambar 9-cm. f/2.2, with special pigskin case. Cost £22 19s. As new £17 15 0
Leitz 13.5-cm. f/4.5 Hektor Lens, coupled. As new £14 15 0

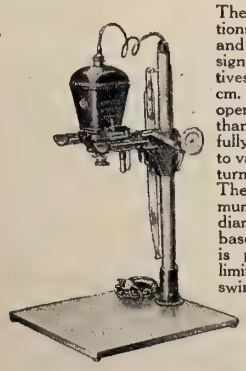
LEICAS—Contd.

Leitz 9-cm. f/4 Elmar Lens, uncoupled. Excellent condition £6 17 6
Leitz 9-cm. f/4 Elmar Lens, coupled, very latest model, chromium finish. New condition £8 17 6
Leitz 13.5-cm. Elmar Lens f/4.5, uncoupled. Excellent condition £7 5 0
Leitz 13.5-cm. Elmar Lens f/4.5, coupled. Excellent condition £11 15 0
Meyer Tele-Megor 18-cm. f/5.5 Lens, coupled for Leica £18 10 0

CONTAXES:

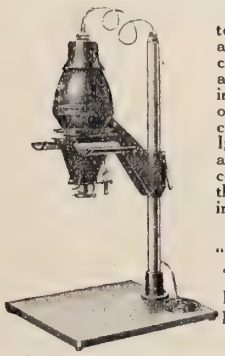
Contax Model II, f/2 Sonnar lens, ever-ready case. As new £39 10 0
Contax Model II, f/2.8 Tessar lens, ever-ready case. As new £34 10 0
Contax Model I, latest wedge-type range-finder, f/2 Sonnar lens. As new £32 15 0
Contax Model I, as above, but fitted f/2.8 Tessar lens, ever-ready case. As new £24 10 0
Zeiss 13.5-cm. f/4 Sonnar Lens, for Contax. As new £16 15 0

EXAKTAS:



Exakta Model B Multispeed, f/2.8 Zeiss Tessar lens, shutter speeds from 1/1,000th to 12 secs., delayed action, case. New condition £21 10 0
Exakta Model B, as above, but fitted f/3.5 Tessar, case. As new £19 10 0
Exakta Model A, latest lever-wind model, f/2.8 Tessar lens, case. As new £18 0 0
Exakta Model A, f/1.9 Dallmeyer Super-Six lens, leather case. As new £21 10 0
Exakta Model A, f/3.5 Tessar. Excellent condition £13 15 0
Exakta Model A, f/3.5 Ihagee lens. Very good condition £11 15 0
Exakta Junior, f/4.5 Meyer Goerlitz lens, leather case. Excellent condition £9 7 6
Dallmeyer Dallon 4-in. f/5.6 Telephoto Lens, for Exakta camera. Excellent condition £6 10 0

MISCELLANEOUS CAMERAS:



Automatic Rolleiflex 6×6, f/3.5 Tessar, Compur Rapid, ever-ready case. As new £19 17 6
Automatic Rolleiflex 6×6, f/3.8 Tessar, normal Compur, ever-ready case. As new £16 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, latest model, fitted with viewing window on top of finder lens, ever-ready case. As new £17 15 0
Automatic Rolleiflex 4×4, very latest model, fitted Compur Rapid, f/2.8 Tessar, ever-ready case. As new £20 15 0
Rolleicord, f/3.8 Triotar lens, leather case. Good condition £11 15 0
Rolleicord, f/4.5 Triotar, Compur, leather case. Good condition £8 5 0
Zeiss Ikoflex 6×6 cm., f/6.3 Novar, Klio shutter. As new £4 15 0
Plaubel Makinette, 16-on-V.P., f/2 Supracomar lens, Compur shutter, speeded to 1/500th sec. As new £15 0 0
Baby Ikonta, f/4.5 Tessar lens, Compur shutter. As new £6 17 6
Rodenstock, 16-on-V.P., f/2.9 Trinar, Compur, leather case. As new £4 15 0
Baldi Camera, f/2.9 Trioplan, Rapid Compur. As new £6 7 6
Westette, f/2 Xenon lens, Compur shutter, purse. Excellent condition £7 17 6
Baldi, f/2.9 Meyer Trioplan, normal Compur shutter £5 17 6
Planovista V.P. Camera, f/3.5 Meyer Trioplan lens, Compur. As new £7 17 6
Voigtlander Perkeo 4×3 cm., f/3.5 Skopar lens, Compur shutter. Excellent condition £5 15 0
Welta Perfekta, f/3.5 Trioplan lens, Compur, case. As new £11 17 6
Kodak Duo, f/3.5 lens, Compur, case. Excellent condition £7 15 0
Ditto, f/4.5 lens, 3-speed shutter, case. As new £4 0 0
Kodak Retina 35-mm. Film Camera, f/3.5 Xenar lens, Compur, case. As new £6 17 6
Voigtlander Bessa 3½×2½, f/4.5 Skopar, Compur. As new £6 17 6
Baldax 16-on-3½×2½, f/3.5 Trioplan lens, Compur. New condition £5 15 0
Nagel V.P., f/4.5 Radionar lens, Pronto shutter £3 10 0
Foth-Derby 16-on-V.P., f/2.5 lens, focal-plane shutter. As new £5 5 0
Dolly 4×3 cm., f/2 Xenar lens, Compur. As new £9 10 0
Weltur Camera 16-on-3½×2½, f/2.8 Tessar, D.A. Compur. Indistinguishable from new £18 0 0
Nagel Pupille 3×4 cm., f/3.5 Elmar lens, Compur, Megoflex attachment, case £12 15 0
Nagel Pupille 3×4 cm., f/2 Xenon lens, Compur. As new £12 12 0

MINIATURE ENLARGERS

Half the joy of photography is in the production of one's own enlargements. For the miniature photographer a correctly designed enlarger is essential, as enlarging from miniature negatives, like all other branches of miniature photography, calls for the application of its own special technique if perfect results are to be obtained. The purchase of the enlarger from R. G. Lewis is in itself a guarantee of satisfaction. As miniature camera specialists we exercise as much concern in the selection of the miniature enlargers we stock as we do about the cameras themselves.

The accompanying illustrations show the "FAM" and Filmarex enlargers, designed to enlarge all negatives from Leica size to 6×6 cm. No more conveniently operated instrument exists than the "FAM," which is fully automatic and adjusted to various heights merely by turning a porcelain wheel. The "FAM" gives a maximum enlargement of 10 diameters on the 24×20 in. baseboard with which it is provided, and an unlimited enlargement by swinging the lamphouse and using the floor as an easel. It is provided with an extremely ingenious negative holder, permitting the negatives

to be used in strip form, and is fitted with a condenser and an f/4.5 anastigmat lens with an iris diaphragm, the stops of which are engraved conveniently on the side. In general construction and detail, the Filmarex corresponds exactly to the "FAM," differing only in that it is non-automatic.

PRICES:

"FAM" 4×4 **£14 14 0**
"FAM" 6×6 **£18 18 0**
Filmarex 4×4 **£9 13 6**
Filmarex 6×6 **£11 8 6**

Besides these two enlargers illustrated, we stock and emphatically recommend the following:—

For the Leica.—Valoy, price £9 11s. 6d.; Focomat, price £16 6s. 6d., and the Vertex, price £6 6s. All these enlargers are supplied without lenses and take the lens from the Leica camera.

For the Contax.—Magniphot, price £10; Automatic Ikomat, price £19 17s. 6d.; and the Vertex, price £6 6s. These enlargers similarly take the lens from the Contax camera.

For Negatives up to 4×4 cm.—Certos, fitted f/4.5 lens, price £8 8s.; Foth, fitted f/3.5 lens, price £8 15s.; Baby Miraphot, fitted f/4.5 lens, price £11 2s. 6d.

For Negatives up to 6×6 cm.—Vertex, f/4.5 lens, price £8 17s. 6d.; Lumimax, fitted f/4.5 lens, £13 10s.; Exakt, f/4.5 lens, £18 10s.; Focomat II, f/4 lens, £50 12s. 6d.

We shall be pleased to send, post free, on application the new Ensign booklet, entitled "The Fascinating Art of Enlarging," also the Leitz booklet, "Enlarging Equipment."

Let us take your present enlarger in part-exchange for one of these up-to-date miniature enlargers. We give the best allowances in the trade.

GUARANTEED SECOND-HAND MINIATURE ENLARGERS

Filmarex 6×6, fitted f/4.5 lens, with diaphragm, condenser and special negative carrier. As new £8 10 0
Leitz Valoy, 20-in. column. As new £7 15 0
Leitz Valfa, for negatives up to 6×6 (original type with rigid condenser), fitted Leitz f/3.5 lens. Good condition £10 10 0
Zeiss Automatic Miraphot, f/4.5 Tessar, for negatives 3½×2½. Good condition £7 10 0
Zeiss Automatic Miraphot, for 6×6 negatives, f/3.5 Tessar. Good condition £7 17 6
Automatic Praxidos, to take Contax lens (cost £13 10s.). As new £9 5 0
Zeiss Automatic Miraphot, ¼-pl. size, fitted with special negative holder, to take 3 Leica negatives in strip, f/6.3 Novar £7 17 6
Dremograph Enlarger, to take Leica or Contax lens. Shop-soiled only £4 0 0
Ensign Miniature Magnaprint, to take Leica lens. As new £3 15 0
Leitz Simple Boxform Enlarger, fitted with lens, for enlargements up to 3½×2½. Cost £5 12s. 6d. £3 3 0
Leitz Simple Boxform Enlarger, fitted with lens, for enlargements up to postcard size. Cost £6 15s. 10d. £4 5 0

R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

CINÉ & 'STILL' . . . . . .

Whether your interests lie in the "single-picture" or the Ciné Camera, you can obtain the same service and facilities for either or both at the Westminster. The best and latest in apparatus and "incidentals" are in stock, awaiting your inspection—including, of course, specially generous terms for EXCHANGES and OUT-OF-INCOME purchase.

●PATHÉSCOPE

New Motocamera, Model H, 9.5 mm.

Remarkably compact and simple to handle. Loaded in a few seconds. Size 4½ in. square by 2½ in. thick; weighs only 2½ lb. Taylor, Taylor and Hobson f/2.5 lens. Extra smooth-running silent mechanism; single pictures at will.

Price £6:6:0

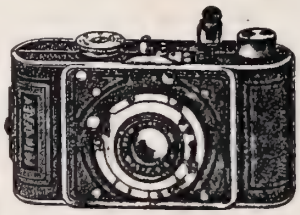
Nine monthly payments of 14/9.

'WESTEX' Miniature ●

Obtainable only at the Westminster.

A most efficient high-precision camera at a marvellously low price. 16 pictures 4×3 cm. on standard V.P. spool. Splendid results, easy manipulation. Quick, self-erecting front. f/4.5 Vidanar anastigmat lens, focussing down to 3 ft., Vario shutter, 1/25th, 1/50th, 1/100th sec., T. and B. Direct-vision optical finder, beautifully made, very compact, slips easily into your pocket. ..... **Price (as above) £3:12:6**

Nine monthly payments of 8/7.



With Radionar f/2.9 anastigmat and Prontor shutter, 1 to 1/175th sec., T. and B. **£5:12:6**

Nine monthly payments of 13/2.

FOTH-DERBY

4×3 cm. Focal-plane.

Takes 16 pictures on V.P. Film.

F/3.5 or f/2.5 Foth anastigmat, self-capping focal-plane shutter, 1/25th to 1/500th sec. and B., delayed action, very compact. F/3.5 lens, £5 8 6. F/2.5 lens, £7 8 6

(Nine payments 12/8.) (Nine payments 17/4.)

●●

READY SHORTLY

NEW FOTH-DERBY with Built-in Range-finder.

With f/3.5 Foth anastigmat **£9:17:6**

Nine monthly payments of 23/1.

Also available later with f/2.5 lens.

LEITZ 'FOCOMAT'

Takes the standard 5-cm. focus Leica lens, screw-in fitting. Scaled from 2 diameters up to 10 diameters. Will take negatives 18×25 mm., 24×36 mm., 3×4 cm., and 4×4 cm.

Price £16:6:6

Nine monthly payments of 38/1.

ROLLEICORD

Improved Model.

With its notable improvements the New Rolleicord becomes a real "Camera-de-Luxe," despite its economical price. Film wind is now automatic; overlapping of exposures impossible. New type hood and larger magnifier, and new ultra-efficient eye-level focussing arrangements. Focussing knob combines depth-of-focus indicator, and engraved exposure scales are provided. Both f/4.5 and f/3.5 models take all **Rolleiflex** accessories (angle mirror only excepted). Both models, too, are leather covered.

Zeiss Triotar f/4.5 and Compur shutter to 1/300th sec., T. and B. **£14:10:0**

Nine monthly payments of 33/10.

Zeiss Triotar f/3.5, ditto **£17:10:0**

Nine monthly payments of 40/10.

Ever-ready Case, £1 0 0.

AGFA SPEEDEX

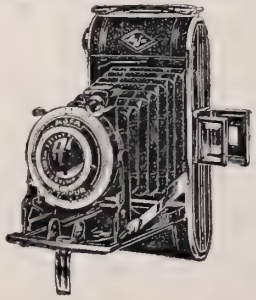
Improved Models.

Takes Standard V.P. Roll Films. Fitted f/3.9 Solinar anastigmat, in Compur shutter, speeds 1 to 1/300th sec., T. and B., self-erecting front, optical direct-vision finder **£5:5:0**

Nine monthly payments of 12/3.

3½×2½, f/4.5 Agfa Solinar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. **£7:7:0**

Nine monthly payments of 17/2.



As above, but with Compur Rapid shutter, speeds 1 to 1/400th sec., T. and B. **£7:19:6**

Nine monthly payments of 18/8.

'RECORD' MODEL.

F/4.5 Apotar anastigmat, delayed-action Prontor II shutter, 1 to 1/150th sec., T. and B... **£5:5:0**

Nine monthly payments of 12/3.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLIV.

Mr. S. G. EXLEY.

From information communicated to our Special Representative.

"I FIRST started photography when at school, and at once acquired an interest which has been maintained and intensified by membership of the Walthamstow and District P.S., and the Pearl Assurance P.S. To those really interested in photography I would recommend joining a club, society or class to further their interests, and to read regularly *The Amateur Photographer*, in which sound advice, help, and criticism are such regular features.

"During the first stages I had to make the most of a very limited supply of material. Often I would spend a whole afternoon and evening in search of a subject worthy of the one plate at my disposal. In those days I used a box camera, but subsequently secured a $3\frac{1}{2} \times 2\frac{1}{2}$ reflex camera, with which I have done most of my work. Contrary to present-day practice in the craze for miniatures, I have obtained a quarter-plate Soho Reflex, which, I hope, will be my companion on my future travels.

"With regard to the material used, I prefer Ilford soft-gradation plates with an appropriate filter. I develop with pyro-soda upon the time and temperature basis, and I make due allowance for the degree of contrast required. If there is a large batch of plates to develop, I employ a tank for the purpose. In printing, my preference is for Kodak Royal Bromide, of a grade suitable to the subject. I find that working with amidol at 68° Fahr. this paper gives a glorious tone.

"The process of developing and printing is more or less one of rule of thumb, but as regards the subject matter, and the final finish of the print, each worker seems to be a 'law unto himself.' I prefer mountainous scenery, even with its climatic vagaries, for so often with the sudden changes of weather very beautiful effects can be secured. I try to record any beautiful natural effects of mist, cloud, rain and sun, for if I am successful in one of these it invariably results in a subject worthy of exhibiting.

"When the print is secured, the finish with which it is treated means the difference between one of commonplace nature and one of quality. First, I lighten any portions requiring that treatment with a careful application of the cyanide and iodine reducer. The second stage is the most tedious, as it involves intricate water-colour paint treatment. The colour must be matched with the print, and applied with the help of gum arabic. Any small defects are obliterated so that they cannot be detected. The third application is the oil finish, which makes the print of rich appearance. Oil pigment can be applied to enrich the masses where necessary.

"I leave the print to dry and finally use the knife on any small defects which require removing, afterwards matching the sheen of the print with gum arabic. The print is then ready for trimming and mounting. Before mounting the print I dry thoroughly both the print and mount. This practice enables the picture to be mounted without risk of cockling, which might occur if the mount retained more moisture than the print, or vice versa.

"Above all, I try always to reproduce, as a final result, what I saw; and confine my efforts to this purpose."

(*A further example of Mr. Exley's work is reproduced on one of the centre Art pages.*)

FAST FALLS THE EVENTIDE. *S. G. Exley.*

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE HOOP," *by Eric G. Castle.*

DAINTY and charming as this study of the draped figure is, and attractive as the pose and arrangement may be, it yet owes not a little to two of the technical aspects of its production, the first being in the management of the lighting, and the second in the delicacy of the key in which it is presented.

The figure, it will be observed, is seen practically dead against the light. The main source appears to be directly behind and obscured by the body, but there is also the probability that, besides this, there is a well-diffused general illumination coming from the front. The effect of the first shows itself in the translucency of the diaphanous draping—from which arises a fine feeling of light and luminous quality—and the secondary lighting provides the shadow detail, prevents an excess of contrast, and renders possible the adoption of the high key.

Very harmonious and pleasing is the latter, and it admirably sets off the nature of the subject, but it is the feeling of light that gives the picture its distinctive pictorial appeal; for not only is it attractive in itself, but it enhances and outlines the beauty of the figure, and also emphasises the grace expressed in the way the draperies fall.

They are disposed in a series of straight lines and curves. The model, on the other hand, is shown in a pose which is mainly curved. The legs are opposed in direction and above them the trunk and head swing back and downwards, the line being extended by the fall of the hair. This makes a fine sweeping curve, starting from either foot, and it is stressed by the inclusion of the draping, which, in some places, follows the same directional tendency, and, in others, lends it force by assuming an opposite inclination. Additional strength is imparted by a like opposition afforded by the arms, and by the imitation and opposition of the curve of the hoop, the upper section repeating the curve of the figure and the lower crossing the lower limbs in the rear.

Line and counter line embellish each other, and considerable artistry has been exercised in the way the draperies are arranged so that the outline of the figure is lost and found among them. In these respects,

particularly, the subject seems well managed, and, though the composition mainly depends on its arrangement of line, the placing is equally satisfactory.

The interest naturally centres in the head, and that is placed almost precisely on one of the strong points of the picture, i.e., the points of intersection formed by divisions of thirds vertically and horizontally. It could scarcely be put in a more forceful position, and this power again is emphasised by the contrast of tone in the vicinity. The dark of the hair is the deepest in the whole picture. The light on the neck is as bright as any elsewhere, and, as extremes of tone attract the attention and they occur in conjunction their pull is united and the concentration of interest is rendered exceedingly powerful.

Insomuch, it is exemplary, but, in connection with the pose—and without depreciating its unquestionable success—it may be mentioned, perhaps, that it seems to be intended to convey a sense of action, or, if not exactly that, a period in which action is momentarily suspended. The impression that is imparted, however, is static, and conveys the suggestion of posing to simulate action—as distinct from actual movement or a period of rest in a succession of movements. It could not be said that the subject is obviously posed, but it is not altogether free from the suggestion, and, if it were possible to incorporate more of a feeling of movement, it would seem more spontaneous and the pictorial appeal would be not inappreciably enhanced. It is recognised, of course, that the existing finish in the arrangement of figure and draperies could scarcely be expected if the subject were taken in action, nor would it seem feasible with the existing lighting, even if it were strong enough to permit an instantaneous exposure, so that, in all probability, the best that could be done has been done.

Still, it does occur to one to wonder if, with a greater measure of co-operation on the part of the model, it would be possible to obtain a more spontaneous impression, and, if so, it would be well worth trying. Nevertheless, the picture, as it stands, is a work of exceptional merit, and one that in the original—No. 69 at the London Salon of Photography, which only remains open until Saturday next, the 10th October—elicited a considerable measure of admiration and approval.

"MENTOR."

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

SOMETHING of the impressiveness and majesty of snow-capped mountains has undoubtedly been caught in No. 1 of the prints reproduced on the opposite page—"Soeschenen Valley," by E. M. Hiekmans—but it also seems that not a little has been lost, for the distinctions between sunlit snow on the tops and blue sky are by no means as marked as they would appear to the eye.

Contrast and Compromise.

The trouble is partly a question of contrast and partly of colour rendering. As far as contrast is concerned, the subject appreciably exceeds the normal range, for while a dark that is equivalent to the foreground trees may often be encountered, it is rare to have to include, at the same time, a light as bright as that of the snow.

In all probability, the fact not being appreciated, development has been allowed to proceed for the normal time. Consequently the excess of contrast in the subject is reproduced in the negative, and, being printed on the usual type of paper, it has meant that some of the lighter tones have not been fully recorded. Printing might be carried farther, but, if it were, while there might be an improvement in the rendering of the lights, it would be accompanied by an overprinting of the darks.

It therefore becomes apparent that something in the nature of a compromise is necessary. Development might have been curtailed if the result had been foreseen, but, as it was not, it is necessary to have recourse to a softer type of printing paper. The latter, with its longer range, would enable the lights to be more fully printed without representing the darks in too low a tone.

Skies and Light Filters.

The improvement would be marked, but there would still be something of a deficiency in the relative representations of the blue of the sky, the clouds, if any, and the sunlit snow.

This arises from the fact that the plate or film is disproportionately sensitive to blue, so that, in the ordinary way, a blue tone of quite a considerable depth according to the eye would be recorded in an equivalent tone to a white. The introduction of a suitable light filter reduces the effect of the blue and allows the plate to distinguish between it and the brighter white. The adoption of the filter, however, means an increase in the exposure time.

There are other factors which enter into the question, and, if further details are sought, reference should be made to the many textbooks dealing with the rendering of colour values in monochrome, but the explanation given is simple and enables the main principle to be readily understood.

Assuming the employment of a filter in this instance, the effect that might be expected would be a clear-cut distinction between the blue of the sky and the snow, the former being rendered in a much darker tone; the presence of clouds would be revealed, and, incidentally, the distance would be rendered with a greater clarity.

Harmonious Values.

It is important to note, however, that the employment of a filter would not affect, to any appreciable extent, the subject contrast, and it would still be necessary to make the adjustments recommended to deal with it.

No. 2, "Serenity—France," by J. Risk, does not disclose so wide a range, but it is a bit inclined towards an excess of contrast, and, as in the former case, either could have done with less development or have been printed on a softer grade of paper.

It shows a nice effect of sunshine; it reveals a hint of tone in the sky, and is not without a sense of good arrangement. Much the same characteristics are displayed in No. 3, "The Shadowed Path," by Geoffrey Chambers, and similar treatment is indicated. The sky showing through the foliage towards the top is an unfortunate feature, and if it could be disguised either by local extra printing or retouching on the print, the effect would be considerably improved.

No. 4, "Inspiration," by J. P. Kelly, is better in this respect, for it manages to exclude all but a hint of sky along the top, and its contrasts do not appear so much inclined towards excess. In arrangement, too, it is not without a sense of form, but it lacks the sunshine of its neighbour and the reason for the choice of title is obscure.

Pastoral Landscape.

Nos. 5 and 6, "Harvest," by John Ellis, and "Abbot's Pool," by G. R. T. Lane, are landscapes of a different type, the former forming a pastoral and the latter representing a river scene.

In No. 5, the group is very well caught, and, apart from an inclination towards centrality, is well placed in the picture space. Its position could be corrected by trimming three-eighths of an inch from the left, and the adjustment also removes the trunk of the tree on that side, the inclusion of which seems rather a mistake. Its foliage remains and, unfortunately, cannot be removed without spoiling the placing.

A viewpoint more to the right would have enabled it to be avoided, and, as far as can be seen, would not involve any disadvantage. It would, however, tend to emphasise the blankness and lack of tone in the sky, which is now only too much in evidence, and, here again, the employment of a light filter would afford a better rendering.

A possible alternative that suggests itself, if the consequent restriction is not objected to, is the entire removal of the sky, the print being trimmed along a line passing through the middle of the line of trees. It would have the advantage of removing the competition of the sky, and would strongly stress the importance of the group. It would make a better picture, taking everything into consideration, but the scale of the figures would be somewhat large in relation to the remainder of the picture space and the effect would not be so good as if the sky had tone and the trees were omitted.

Length of Foreground.

The foreground, too, would seem rather long, but would be justified by the presence of the group. A specially wide stretch of foreground always needs something to lend it variety, and, though the qualification is satisfied in the amended version of No. 5, the waste of water in No. 6, which occupies pretty well half the print, seems devoid of interest. The introduction of a boat; a foreground of reeds, or something to break up and diversify its tone would provide the required relief, and should be sought on another occasion. "MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

COPYING A PICTURE.

A READER wrote to ask whether he could copy a picture with his film camera. That was all. Some enquirers waste a good deal of time—their own and other people's—by not giving sufficient information to enable some sort of an answer to be given. What sort of picture did he want to copy? What were the equipment and movements of his film camera? If he had asked me the question verbally I should probably have asked him a dozen in return before attempting an answer.

The illustration is a copy of an oil-painting, and the negative is a film.

That is information of a sort, but does not convey much. I propose to go into details a bit, and see if I can throw some light on the question put.

I wanted a copy of this particular picture. It is on canvas, unframed, and was painted as long ago as 1807, so that it is not surprising that the surface is cracked and irregular. It is 25×30 in., and I intended copying it on a 5×4 plate, as a 24×30 in. picture would have exactly the same proportions. In view of the reader's question I decided to try copying it on two unexposed films in a $3\frac{1}{2}\times2\frac{1}{2}$ pack.

Now, in the first place, my $3\frac{1}{2}\times2\frac{1}{2}$ camera has a focussing screen, which can be brought into operation simply by removing the pack adapter, and I regard it as rather futile to attempt a copying job unless a focussing screen can be used. Even then it is none too easy a task to get the image square and true, properly included and placed in the space, and correctly focussed. The camera must also have sufficient extension to permit of focussing on a close-up object.

It will be understood, then, what almost insuperable difficulties arise with a roll-film camera with no screen. The small finder is worse than useless, and the focussing scale may not run below six feet.

Readers often ask whether they can use a " magnifier " in such a case, perhaps with a fixed-focus box camera. But even if they could decide the exact distance of the picture to give a suitable size on the negative, they would have to fit a supplementary lens of a focal length equal to that distance. They would need a special lens for each case with which they had to deal, and, after all, this method is more or less of a makeshift.

If a beginner were likely to want to make, say, half a dozen copies in a year or so, I would advise him to get a suitable camera with a focussing screen and sufficient extension. He could probably get one second-hand for about ten shillings, and it would have other uses as well.

Copying my picture indoors by daylight, my first difficulty was to minimise the reflections from the irregular varnished surface, and I had to turn the picture away from direct window light. I stood it nearly upright on a chair, leaning against the back. This meant tilting the camera slightly downwards so that the back was parallel with the picture. Having got the image right and sharp on the screen at f/4.5, I stopped down to f/11.

The film was orthochromatic—there were no reds in the picture—and I used a yellow filter (four times with that film) for the sake of the yellow light in the evening sky.

My next difficulty was the exposure, about which, in the conditions, I was very much at sea. An extinction meter might have helped. If I had had an electric meter I suppose I ought to have shown it the picture and it would have told me the "correct" exposure. Perhaps. But I cannot help thinking that its reading must have been influenced by brightly lighted objects around and beyond the picture itself.

Anyhow, I chanced a minute on one film, and two minutes on the other. When I came to develop the whole pack some days later I found, to my surprise, that less than a minute would have sufficed.

Had I used a 5 × 4 plate I should have developed it at once, and then made another exposure if necessary. Although my film negative happens to answer my purpose, the print does not give the quiet mellow tone of the picture, and in some sense is a failure.

But at any rate I have copied a "picture" on a "film." I hope I have also suggested some limitations in so doing, and that there are better ways of doing such a job properly.

Large Developing Dishes for Exhibition Prints

By D. J. McCAULEY.

THERE has been much lamentation on the part of secretaries of various photographic societies lately about the small percentage of the newer members who exhibit in their own annual exhibitions. On enquiry, it has been found that this abstinence is not due so much to the belief by the novice that his work is not good enough, but to the apparent difficulty in producing exhibition prints of the required size.

He may be used to making prints up to the largest size he can get into his usual developing dishes, but he realises that these are not big enough for exhibition work. When he looks up a price list he receives a nasty shock at the cost of large dishes, and as two at least are necessary he decides that they are not worth buying, as he will not need them very often; and so—no exhibition pictures.

It is true that he might be able to borrow a large dish from the society, or perhaps use their dark-room altogether, but being only a new member he does not like to assert himself. Moreover, there is always a rush for the society's large dishes before the annual exhibition, and a novice would be disheartened with repeated failures to procure them.

It has probably occurred to many amateurs to make developing dishes of the requisite size themselves, but nearly always the results have been anything but successful, frequently being nothing more than a shallow cardboard box with candle-grease at the joints, or plywood with plaster of paris or wax at the edges. Serviceable dishes can, however, be made quite easily from papier mâché, and it has always surprised me that more use has not been made of this material.

Papier mâché dishes are quite the best substitutes for porcelain or earthenware; they can be made very simply at home, and the results are perhaps superior to china dishes in such considerations as weight, "non-fragileness," and certainly cheapness. Only in length of life is the china dish really superior.

The theory of the process is that paper is moulded round an object of similar shape to a dish so that it takes the same shape as the dish. It is as if a plaster-cast were made of the outside of the object, only paper is used instead of plaster.

The method of procedure is simplicity itself. First a paste is made, the best formula being:—

Flour	..	3 tablespoonfuls.
Size	..	1 tablespoonful.
Alum	..	1 tablespoonful.

The ingredients are mixed together with a little water until a thin smooth cream is obtained. The mixture is next brought to the boil, stirring all the while, and then allowed to cool. Next, a large quantity of unglazed, porous brown paper, or preferably sugar bags, is procured, but the paper used must not be of the glazed or hard surfaced variety. Newspaper will do if no other kind can be obtained, but it is not altogether satisfactory and much more is needed.

The only other necessary article is a tray, box or flat block of wood whose external measurements are the same as the required internal measurements of the new dish, and round which the paper may be moulded. Better than a tray or box is a developing dish of the same size as that required to be made, so that if one can be borrowed for a short while so much the better.

The dish (let us assume we have managed to borrow one) is placed base upwards on the table and vaseline smeared all round the bottom and outside of the sides. Then the paper is taken and torn (not cut) into pieces about 2 in. square. These are taken one by one and dipped into the paste to make them limp, and are stuck all over the bottom and outside of the dish, each piece slightly overlapping the other.

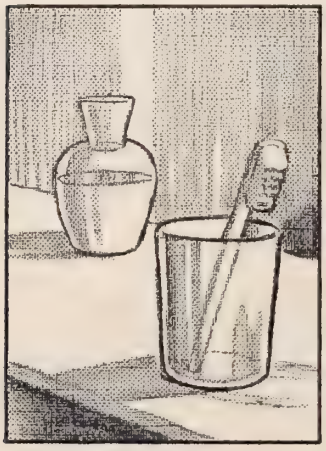
When it is completely covered, more pieces, to make a second layer, are stuck irregularly over the first pieces, care being taken to press them firmly down and to exclude all air bubbles. Also care must be taken to get the corners perfectly well covered and rounded.

The whole process is repeated several times until the whole of the outside of the dish is covered with a built-up jacket of paper at least ten layers thick. It is then allowed to dry on the outside for a day or so, and it will be found that the thick paper "shape" may be slipped off the original support, giving a replica of the dish. The vaseline was put on in order to facilitate its removal.

The edges of the paper dish are trimmed with scissors or a sharp knife, and bound over with more strips of pasted paper. The completed dish is then allowed to dry thoroughly for a week in a warm place.

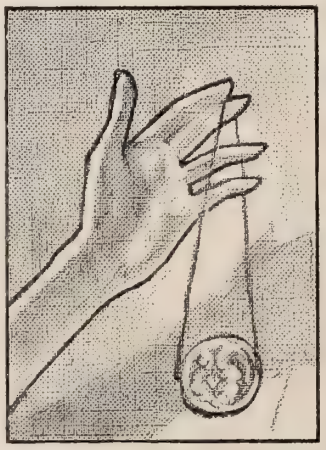
When it is absolutely dry and hard, inside and out, four coats of bath enamel, Brunswick black, or best of all, cellulose enamel are applied. Each coat is allowed to dry before applying the next. The dish is now ready for use. For small dishes less than ten layers will be sufficient, but for dishes larger than 18 × 20 fifteen layers are needed. The thickness of the dishes depends on the size.

The total cost of making a 12 × 10 dish is 6d., and a little patience, and it will remain serviceable for at least a year, even if used frequently.



Picture Points

No. 20 (New Series) *by RICARDO*



A Point on Good "Drawing."

THERE seems to be some confusion with beginners in pictorial photography as to the meaning of good "drawing." The term is often wrongly used when it is meant to convey the impression of the "third dimension" or the "modelling" of the subject. While each is dependent upon the other to a certain extent, they are quite different in application.

A comparative glance at the two sketches will show that the lower sketch is the more pleasing of the two because, briefly, it *looks* more natural. Perspective should not enter into it, because both are equally true as far as their size and relationship is concerned in proportion to their distance from each other, and it is quite possible that a negative similar to each could be made from the same camera from the same viewpoint, moving only the objects. We are so used to comparing one thing with another when they are in the same plane that as soon as they are shown to be contradictory in proportion, in the physical area on the print, the false relationship tends to become irritating, and so spoils the general effect of the picture.

The Effect of Light on Modelling.

THE term of "modelling" in photography applies to the suggestion of the third dimension on a flat surface—the print. When the subject is said to have good modelling it should convey the impression of solidity as well as the shape, and the lighting used and its direction is, no doubt, the most important item to be considered to provide this effect. It is not meant that whenever a subject has strong lighting and contrasty modelling that it is necessarily good. In fact, when we become attracted by the nature of the lighting used, instead of being conscious only of the subject itself, then the lighting has defeated its purpose.

In the top sketch we can see the effect gained by using a front lighting. There is, consequently, little or no suggestion of the various planes on the hand and arm, and, although this does not seriously detract from the design, i.e., the *pose* of the hand, fingers and pendant, it would be much more interesting to alter the angle of lighting to one side, as in the lower sketch, so as to give greater relief to the parts concerned. The modelling is, consequently, better; there is a pleasing variation of tones in the blank spaces, and it is therefore more realistic. It is a good point to remember that with objects with low relief a side lighting will show the modelling to the greatest extent, and the lower the relief the lower the lighting. Medallions, coins, cameos, and all such low-relief subjects, are shown to the greatest advantage when a strong side lighting is provided.

Holding in the Interest in the Picture.

QUITE apart from having only one major point of interest in a picture, all the related items should be so placed that wherever the eye is allowed to rest within the four borders they attract it into the picture and not out of it. It is not enough to use a darker sub-mount round the print and to rely also on a generous margin of mount, but the print should be complete in its arrangement before mounting.

There are several points that contribute to wandering interest, many of which have already been discussed in this series, and the keen observer will, no doubt, recognise many of them in the left-hand sketch. The fault concerned in this picture point is not so much of divided interest, lack of balance, etc., but rather with the way the "lines" of the ground, tree, clouds and figure fall away towards the two lower corners. No matter how strong the main subject matter may be, it is weakened considerably when this fault occurs.

After some experience in pictorial composition, even a double sloping arrangement, such as this, can be successfully countered, but the beginner is advised for the time being to endeavour to select or compose his pictures so that the form at the base does not fall away at the corners but rises instead, after the manner of the right-hand sketch. The eye now tends to move in a circular direction, finishing up at the main point of interest, the figure.

CAN YOU TURN YOUR PRESENT CAMERA INTO . . .

A ROLL-FILM CAMERA using the popular $3\frac{1}{4} \times 2\frac{1}{4}$ film, and giving twelve $2\frac{1}{4} \times 2\frac{1}{4}$ pictures costing only 1d. each ?

A PLATE CAMERA, for the many occasions when the subject requires immediate development. For specialist photography of machinery, scientific subjects, artificial light, etc., etc. ?

A 35-mm. MINIATURE CAMERA, for occasions when one requires to carry large quantities of film material with as little weight as possible ?

A STEREO CAMERA, for stereoscopic pictures, which give the pictures a delightful plastic effect ?

If your camera does not do all these things

THEN CHANGE TO A Rolleiflex

the twin-lens reflex that has the widest range of accessories, and is therefore remarkably versatile. With Compur shutter, speeded to 1/500th sec., T. & B., and Zeiss Tessar f/3.5 lens..... **£25 0 0**

Look for this sign on your Dealer's window.

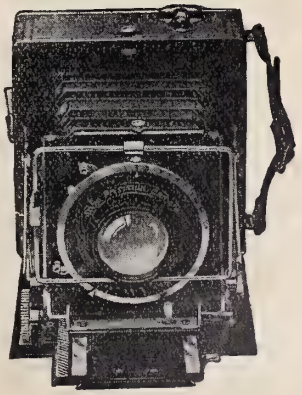
Two Famous SOHO CAMERAS

THE SOHO REFLEX



The SOHO REFLEX—Acknowledged by experts to be the best camera in the world, the Soho Reflex may be relied upon for the finest possible work under the most exacting conditions. In addition to its many other uses, the Soho Reflex is invaluable in the studio for children's portraiture and similar work where quick focussing of a difficult subject is essential.

The SOHO PRECISION speaks for itself—Read this extract from a letter recently addressed to the London Camera Exchange Co., Ltd., by an advanced amateur photographer :—

"You may remember you recently supplied a Soho 'Precision' Camera to me. This is worth its weight in platinum, and is producing as good results as I formerly obtained with a half-plate triple extension camera."

We could ask for no better confirmation of our claim that the SOHO PRECISION possesses all the advantages of a FIELD CAMERA and is, in addition, as MOBILE AS A POCKET CAMERA.

THE SOHO PRECISION

The very wide scope of a *Leica*

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents, not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Shadows and Shadow Impressionism

By "ACTINOGRAPHIST."

CINEMATOGRAPHY—in its efforts to dissociate itself from stage technique—is becoming more and more a matter for impressionisms. Especially where shadows are concerned is the force of this statement apparent, for very often it is possible to convey not only points in the eduction of the story, but also such emotions as fear, pleasure, repulsion, etc., without the need for outside assistance.

Now, impressions, although they represent only one doctrine, may be of various kinds. Of these, shadows may be utilised to produce the following effects or influences: 1, Development of action; 2, Impressionistic indication of settings and surroundings; 3, Pictorial and other effects.

Technical Details.

So far as the first of these objectives, i.e., the development of action, is concerned, I need say but little. Obviously, of course, the use of the device must be mainly confined to close-up shots—in which the moving shadows and not the incidental actions are photographed. American producers have made most effective use of this device, although it must be admitted that it has few advantages over straightforward action beyond that it may successfully place the spectator into the position of a character who himself sees the shadows though not the authors of them.

This device also enjoys that allurement which accompanies most novelties, although in this case it is by no means certain that unqualified novelty is any advantage.

Another of our objectives is the creation of impressionistic indications of settings and surroundings. By this is meant that a character or characters can be filmed against a plain, bare background and some indication of the pretended surroundings conveyed by means of shadows carefully cast upon the background itself.

This effect can, of course, be heightened by the natural expedient of dressing the characters in appropriate costume. Thus, a man in prison garb could have not only his *locale* but also the extent of his alleged criminality suggested by the shadow of a hangman's scaffold flung upon the screen just behind him. Or, if it be intended merely to indicate confinement, the shadow of a barred window or cell-door grating may be employed with similar effect.

Models.

In order to secure these and certain other shadows, it is necessary to improvise small, cut-out models—in the construction of which three-ply wood or even strawboard may be satisfactorily employed.

The actual shadows may then be cast with the aid of a large spotlight, care being taken to ensure accuracy in such details as the direction of beam and the size and position of the shadow.

It may be appreciated that this method is admirably suited to amateur production, in so far as expenses must be kept down to a minimum and because seldom indeed are such properties used in their original form more than once only. Notwithstanding its humble nature, large professional bodies have made great use of the device at times when all the resources at their command could provide no better expedients.

Uses for Effect.

We come now to the consideration of effect uses for shadows. These differ from the purposes already dealt with; they may be said to rank with the close-up in marking the point where the cinema begins to break away from stage technique.

Now, effects are necessary because it is part of the skilled amateur's job to impress his spectators with the feelings and emotional complexes that assail the principal characters of his photoplay. For this reason, we endeavour to dwarf a man when he is experiencing fear; we take our spotlight low down in the foreground and direct its beam at an angle upwards—so that the shadow on the background is gigantic and sinister, reducing the man himself to puny and secondary dimensions.

This fearful wretch sees his antagonist or the cause of his fear bold and predominating; no overpowering shadow is allowed to dwarf *him*, the shadows—if any—being themselves small and secondary.

Another illustration of how this device works to achieve its end is shown in the method of creating suspense by introducing merely the shadow of a mallet held suspended. The moving shadow of a door slowly opening can also be used to emphasise sinister atmosphere, whilst a hand with the fingers crooked and claw-like can be made to cast shadows suggestive of impending calamity.

Further Hints.

The use of shadows should always be resorted to where cheap strawboard

On every side football, both "Soccer" and "Rugger," is in full swing, and endless opportunities are afforded the amateur ciné worker for obtaining good action subjects. The Rugby game, in particular, offers excellent groupings.

"cut-outs" are employed in place of large sets. A variation of this method was used in the amateur film "Fall of the House of Usher"—where the castle in the gloomy and depressing exterior setting to the traveller's arrival was merely a flimsy suggestion with ice-cream cones surmounting its circular towers.

This film, indeed, contains many ingenious and novel uses of the shadow, but as these have by no means proved themselves essential to the precise technique of cinematography, it is not advisable for the young amateur to imitate them as correct forms of expression.

Many of the effects referred to above may be improved by means of slow-motion photography. For instance, where suspense or the agony of waiting is the mood we wish to convey, the swinging pendulum of a massively-built clock may be recorded in this way. I find the ultra-speed mechanism of the "Victor" camera admirably suitable for these pictures; even when the drive is speeded up to maximum, the film is kept correctly in track by means of a special gate-tension which is brought into play.

Finally, here's a hint of caution about this shadow cinematography. We can make a film entirely from shadows—as, indeed, we can from a succession of silhouette scenes. But such a film would rank merely as a "stunt" effort; and, in any case, it should be kept extremely short.

Treatment and Synopsis

By S. E. L. MOIR.

EVERY film has its origin in a *theme*. It assumes literary form in the synopsis stage—and becomes cinematic for the first time during the preparation of the scenario. Since only the scenario is filmic, it follows that success in amateur production depends upon the efficiency with which all three stages are developed.

Naturally, the original theme is seldom more than a bare idea. "Knowledge is available to everyone," "Carelessness leads to disaster," and the well-worn human triangle are examples of this.

Treatment, or the stressed aspect of the subject, is developed to appear part of the theme itself. This is done in such a way that simplicity still prevails—as may be seen from the examples, "Knowledge is available to all who utilise the Public Library" and "Carelessness in driving leads to disaster on the roads."

The synopsis is a further development constructed to present a written *précis* of the intended film. It should briefly describe all the "incident" which the amateur wishes to exploit and should also set down alternative situations.

At a first attempt, the task appears to be fairly easy. But in the subsequent translation from literary (synopsis) to filmic (scenario) terms the many pitfalls become obvious. Even the simple phrase "Tom borrows a book on bimetallism" cannot be filmed as easily as all that. As a result, the beginner will find it necessary either to cut down the length of the synopsis or to purchase an additional quantity of film stock.

In shortening the synopsis, care should be taken to cut out no detail which is relevant to the incident dealt with. More often than otherwise, this will lead to confusion and difficulty in following the narrative—so that it is far better to take out whole passages which deal with comparatively unimportant or non-essential episodes.

In the adoption of this plan the real narrative is left intact; nor will the film suffer through awkward continuity or the lack of adequate explanation.

As there is now an overwhelming demand in amateur circles for realistic documentaries and playfilms of intent, beginners should avoid any treatment that promises to leave no lasting impression upon an audience. Such treatments are the familiar offering of ordinary theatre films—which owe such interest as they attract mainly to screen personalities and other facilities to which the ordinary amateur has absolutely no access. But, even without these, suitable treatments can enable him to create lasting impressions.

Then as a means of assisting in the satisfactory adjustment between synopsis and film footage, it is suggested that no *general* terms be adopted in the literary *précis*. There is, indeed, great danger in being *too* literary here.

For the same reason, all abstract terms should be avoided. Instead of the hazy statement "Education is represented," the words "Chairman of Schools Committee is present" may be preferred as being at once more concrete and capable of easier translation in terms of film image.

It is extremely unwise to make alterations to the scenario without first noting their effect on the synopsis. Here the full effect of such alterations can be noted at a glance—for in the scope of a good synopsis of, say, two hundred words, it should be possible to visualise any two-reeler.

Care should also be taken to avoid including in the scenario itself numerous shots which are problematical or which cannot be secured with absolute certainty. Unless this be done, there will arise a fatal tendency to alter the script during the shooting stage.

For, despite the many transgressions, all fully-prepared films (excluding holiday documentaries and the like) call for such handling, and cannot give entire satisfaction unless they follow the finished plan of the scenarist.

The Jubilee of a Veteran Amateur Photographer

TUNBRIDGE WELLS has been celebrating a photographic jubilee, that of Ernest R. Ashton, a well-known pictorial photographer some thirty or more years ago whose name is hardly known to the present generation. It is not that he has dropped his interest in photography, or given up the use of his camera by any means. He is just as keen as ever and each year he visits some more or less remote corner of the earth and brings back an interesting collection of photographic records which he utilises for the travel lectures that he gives locally; but he has long since retired from the exhibiting world, and it is probably a quarter of a century at least since one of his pictures was seen in any of the major exhibitions.

Ernest Ashton will long be remembered by the series of pictures of India, Egypt and the East which were a notable feature of the exhibitions of the late 'nineties and early part of this century. Using the double- and triple-coated Sandell plate he tackled successfully problems of light and sunshine that would be difficult enough with the most modern materials and equipment. He was an early member of the "Linked Ring," and original Salon, and a contemporary and intimate of H. P. Robinson, Col. Gale, B. Gay Wilkinson, and other stalwarts of the early photographic world. He is, I believe, next to that remarkable veteran, J. E. Austin, the senior member of the Camera Club, of which he has been a member since the old days in Bedford Street, Strand.

The exhibition at Tunbridge Wells in the hall of the Literary Institute, held during the last two weeks of September, comprised twenty of his original framed pictures in platinum or carbon, as shown at the Salon and other exhibitions thirty to forty years ago. Pictures like "The Home of the Great Mogul," "In the Jasmine Tower, Agra," "Evening near the Pyramids," and "A Cairene Café," are as fresh to-day as when they were made. In addition there were about a hundred 10×8 enlargements of travel pictures of more modern date, ranging almost literally "from China to Peru."

Altogether, the collection was a tribute not only to Mr. Ashton's pictorial skill but to his sustained interest in photography over fifty years. J. DUDLEY JOHNSTON.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, October 7th.

Battersea Men's Inst. C.C. Elementary Photography of Animals and Birds.
Birkenhead P.A. Portraiture by Flashlight. F. W. Hollett.
Brighton and Hove C.C. Annual General Meeting.
Bury P.S. "Jamaica, Queen of the Caribbean Sea." J. Armitage.
Croydon C.C. "The Camera Cannot Lie." Dr. D. A. Spencer.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

39. CHLORO-BROMIDE PAPER

THIS development paper is slower than bromide but more rapid than gaslight paper, and gives a variety of colours ranging from warm black to brick red simply by adjusting the exposure time and the developer to suit. Unlike bromide or gaslight papers, chloro-bromide is available in practically only one grade of contrast, so that negatives for use with it should be of good printing quality with a long scale of tones.

Most makes of chloro-bromide are usually available in two speeds, rapid and normal. The rapid being intended for big enlargements and the normal grade for contact work.

With a normal developer and correct exposure for the stated development time, the colour of the print is a warm black. For warmer colours, the print must be over-exposed and developed in dilute developer, or for a shorter time in the normal developer, or by varying the character of the developer.

For general warm-black tones, the following M.Q. developer is quite suitable.

Metol-Hydroquinone Developer.

Metol	10 grs.	0.8 grm.
Sodium sulphite (crys.)	½ oz.	25 grm.
Hydroquinone	30 grs.	3 grm.
Sodium carbonate (crys.)	½ oz.	25 grm.
Potassium bromide	30 grs.	3 grm.
Water up to	20 oz.	1,000 c.c.

Development should be complete in about 1½ minutes at 65° Fahr.

For colours ranging from warm brown to brick red the following developer is recommended:—

Chlorquinol Developer.

Sodium sulphite (crys.)	1 oz.	50 grm.
Sodium carbonate (crys.)	1 oz.	50 grm.
Potassium bromide	16 grs.	1.8 grm.
Chlorquinol	60 grs.	7 grm.
Water to make	20 oz.	1,000 c.c.

Time of development, 2 to 3 minutes at 65° Fahr. For warmer tones, dilute with an equal bulk of water, increase the exposure (two to four times) and add more bromide. The time of development will also be increased.

40. RED AND BLUE TONING

IN addition to sulphide toning (No. 5) for brown and sepia tones, a variety of colours can be imparted to black-and-white bromide prints by the following baths:—

RED TONES.

These are readily obtained with copper toning. If the toning action is stopped at the right moment warm-black colours are secured. Prolonged action produces red tones.

1. Copper sulphate	60 grs.	6 grm.
Potassium citrate (neutral)	1 oz.	30 grm.
Water	20 oz.	1,000 c.c.
2. Potassium ferricyanide	60 grs.	6 grm.
Potassium citrate (neutral)	½ oz.	30 grm.
Water	20 oz.	1,000 c.c.

For use, mix equal parts of each and add an equal quantity of water. The mixed solution will not keep.

In this toning bath the action proceeds slowly, so that the alteration in colour can be noted. Toning should be conducted in daylight, and the prints removed as soon as the desired effect is reached. Wash the print thoroughly before toning, but for ten minutes only after toning or the colour will be affected.

RED TONES can also be obtained on prints that have first been toned brown by the sulphide method, and then, after washing, immersed in the following:—

Ammonium sulphocyanide	30 grs.	2 grm.
Gold chloride	2 grs.	.1 grm.
Water up to	4 oz.	100 c.c.

After toning for ten minutes in this bath the desired colour should be obtained.

The prints are then refixed in 10 per cent hypo solution for five to ten minutes and finally given a good wash in running water.

BLUE TONES.

The following bath will produce various tones of blue according to the length of immersion.

1. Potassium ferricyanide	30 grs.	3 grm.
Pure sulphuric acid	60 min.	6 c.c.
Water	20 oz.	1,000 c.c.
2. Ferric ammonia citrate	30 grs.	3 grm.
Pure sulphuric acid	60 min.	6 c.c.
Water	20 oz.	1,000 c.c.

Use equal parts of 1 and 2. The mixed toner will not keep. Prints should not be too dark as this toner intensifies. Wash after toning to remove yellow stain.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Cleaning Lenses.

What is the safest and most efficient way of cleaning a lens? C. D. B. (Bristol.)

If it is only a matter of dust on the surface, a soft camel-hair brush, kept specially in an envelope, for the purpose is all that it is necessary, but as soon as finger-marks and smears are apparent, then it is necessary to clean the lens with either lens-cleaning tissue, obtainable from Messrs. Ensign Limited, 88, High Holborn, London, W.C.1, or with a piece of clean old linen. After brushing the surface, breathe on the lens for a moment or two and then with the tissue or linen carefully rub the lens in a circular direction, and not from side to side as is often done. If this is not effective a very light application of any of the lens-cleaning fluids now on the market, or alcohol, should be quite effective. Only the merest trace of the spirit should be allowed on the glass and care should be taken that none of it is allowed to creep in between the glass and mount. A fresh piece of tissue should be used for the final polish.

Bromoil Pigment Drying.

What is the usual time taken for bromoil pigment to dry for mounting purposes? A. C. (Reading.)

It depends on several factors. The consistency of the pigment mixture, the humidity of the atmosphere and the character of the paper base. Much time can be saved by mixing in driers with the pigment, but it then becomes rather difficult to apply to the print, with the usual pigment and medium. An average bromoil, with not too many dense areas, will take about a week to be sufficiently dry to mount. When the ink is no longer tacky to the finger-tip, it is sufficiently firm to be handled. It is, however, advisable to mount behind a cut-out mount when time is short, as this method does not require surface handling.

Desensitising Roll Films.

Is it possible to desensitise an orthochromatic roll film in the same way as panchromatic emulsions so that they can be developed in a brighter light? D. M. C. (Clapham Common.)

It is quite in order to desensitise an orthochromatic roll film, provided the instructions regarding time of immersion and the colour of safelight to use are followed.

Filter Factor.

I have just bought a yellow filter with a mark of 6× on the side. I am given to understand that this means that six times the normal exposure should be given to secure full exposure, but in practice I found that I was over-exposing and now I give three times instead with excellent results. Why is this? J. D. B. (London.)

You are right in assuming that 6× means six times exposure, but since you find that three times is sufficient, it goes to prove that the factor number was not intended for the sensitive material you are using. For instance, many yellow filters which require three to six times exposure with orthochromatic material, may require only one and a half to three times with panchromatic material. Again, the filter may be of an old pattern and its multiplication factor is not correct when used with modern material.

M.Q. Developer for Bromides.

Please supply an M.Q. formula suitable for developing bromides. J. J. (Edinburgh.)

The following makes up a good well-balanced developer that gives good contrast with maximum detail.

Metol	20 grs.	2.3 grm.
Hydroquinone ..	60 grs.	7.0 grm.
Sodium sulphite (crys.)	1½ oz.	73.0 grm.
Sodium carbonate (crys.)	1½ oz.	73.0 grm.
Potassium bromide	20 grs.	2.3 grm.
Water to make ..	20 oz.	1,000 c.c.

For use mix with an equal quantity of water.

Glass in Enlarging Easel.

Is it better to use a piece of flat glass on top of the bromide in order to keep it flat on the enlarging easel than to pin the paper down at the corners? D. C. B. (Ealing.)

If the glass is of good quality and free from air-bubbles and scratches there is no reason why it should not be used to hold down the bromide paper instead of having to pin it and so perforate the corners. There is little or no difference in the results obtained from either method.

Range-finders.

What is the difference between a range-finder and a coupled range-finder as specified on some cameras? Surely they are both used for focussing the lens? C. B. Y. (Guildford.)

The ordinary range-finder which can be used separately in the hand, or when attached to the camera body, is intended only to show the distance between the eye and the object concerned. The camera lens must be focussed separately at this distance. The coupled range-finder is fixed permanently to the camera and is so coupled with the lens that when the object is focussed sharply in the range-finder the lens has been automatically focussed at the same time on the film or plate. The coupling between the lens and the range-finder is usually made by either gears or by a cam. The coupled range-finder will also show the distance between the camera and object, but this is usually indicated on the lens mount.

Steaming Prints.

In a recent article in "The A.P." the author mentioned a method of steaming prints with a view to finishing them. Can you explain how this is done? E. F. R. (Birkenhead.)

The purpose of steaming a print is to "fix" any retouching made by either water colour or conté pencil and to make them less apparent. The usual method is to bring a kettle to the boil and hold the print by the edges and pass the emulsion side as close as possible to the spout, moving it quickly from one side to the other until the entire surface has been covered. Care must be taken to see that this is not overdone, as the gelatine will begin to dissolve and so ruin the print. As soon as the emulsion becomes tacky, lay the print aside to dry. When dry it also has the effect of producing a slight sheen which helps to bring out shadow detail. It is advisable to experiment with a spare print before "steaming" a valuable one.

Colour Filters.

Is there a book that deals, in simple language, with the subject of colour filters and their various uses? G. F. (Harrow.)

A very clear and concise treatise on colour filters and their various uses is given in a booklet, "Panchromatism," published by Ilford Ltd., Ilford, Essex, at 8d., post free, and in "Photographic Rendering of Colour in Monochrome," by Dr. B. T. J. Glover, obtainable from the Fountain Press, 19, Cursitor Street, London, E.C.4, at 1s. 2d., post free. The subject is also dealt with at greater length in "Photography of Coloured Objects," published by Kodak, Ltd., Kingsway, London, W.C.2., at 2s. 10d., post free.

"CRAZY" WEEK

We are having a "Crazy" week for 10 days only. Everything reduced to amazingly low prices. Cash only/or reserved against a deposit

10 days' only. Crazy prices.

3½×2½ Wirgin Plate Pocket, Zeranar f/2.9, D.A. Compur, double ex., rise, cross, wire finder, slides, case. Like new.... **£5 17 6**

3½×2½ Ensign Press Roll Film, latest f/4.5, self-capping 1/25th to 1/500th, automatic film wind, case. Cost £13..... **£3 19 6**

3½×2½ Cameo, Aldis f/4.5, Mulchro 1 to 1/100th, double ex., rise, cross, wire finder, slides. As new. Crazy price..... **£2 17 6**

9½-mm. Miller Super Camera, Dallmeyer f/1.9, 3 speeds, all metal, similar to Dekko, interchange lenses, latest. Snip.. **£5 17 6**

3½×2½ Wirgin Roll Film, f/4.5, 3-speed, wire finder. Gift..29s. 6d.

½-pl. Ensign Special Reflex, Aldis-Butcher f/4.5, self-capping 1/10th to 1/1,000th, deep hood, reversing back, slides. "Crazy" **£3 17 6**

9½-mm. Pathe B Motocamera, f/3.5. Cost £6 6s. Gift... **£2 17 6**

½-pl. Goerz Plate, f/6.8, 1 to 1/150th, double ex., slides, case..37s. 6d.

½-pl. Ensign Folding Reflex, Cooke f/4.5, self-capping 1/10th to 1/1,000th, deep hood, double slides. Cost £34. Bargain **£3 17 6**

3½×2½ Super Bessa Voigtlander, coupled range-finder..... **£11 11 0**

6×6 Super Ikonta, f/3.5 Speed Tessar, Compur Rapid. Like new **£15 15 0**

Retina Kodak, f/3.5, latest Compur, takes Leica film..... **£5 17 6**

3½×2½ Zeiss Ernemann Press, Zeiss Tessar f/4.5, self-capping 1/10th to 1/1,000th, double slides, case. Cost £32. Crazy week **£6 12 6**

5×4 Graflex Reflex, Ross Xpres f/4.5, revolving back, double slides, case. Cost £36. Like new. Gift..... **£6 17 6**

1a Kodak Autographic, Achromatic lens. As new.....12s. 11d.

3½×2½ Super Ikonta II, Zeiss Tessar f/3.5, Compur Rapid, D.A., all built-in release, latest, coupled range-finder..... **£19 19 0**

G916 Bolex 9½/16-mm. Projector, 500-watt, resistance.... **£35 0 0**

16-mm. Stewart-Warner Camera, f/3.5, 4 speeds, 100-ft., case **£4 4 0**

8-mm. Kodascope Projector, resistance, case. Like new.. **£4 17 6**

16-on-3½×2½ Super Ikonta, Tessar f/3.5, Compur. Like new **£11 11 0**

6×6 Ikoflex, f/4.5, 1 to 1/100th, latest. As new..... **£6 17 6**

3½×2½ T.-P. Reflex, Dallmeyer f/4.5, latest self-capping, latest hood with slide cover, sky shade, slides. Like new..... **£5 17 6**

16-mm. Ensign Simplex Wafer Camera, f/3.5, 1-in. thick only, 2 speeds, the world's finest "magazine" camera, 50-ft. Cost £20 **£9 17 6**

1a Tropical Carbine, Ross Xpres f/4.5, Compur. As new.. **£3 17 6**

3a Kodak Autographic, f/6.3, Compur, case. As new.....39s. 6d.

3½×2½ Zeiss Palmos Press, Zeiss Tessar f/4.5, self-capping 1/10th to 1/1,000th, double slides, F.P.A., case. Cost £28. Snip **£7 7 0**

16-mm. Kodak C Projector, 100-watt and resistance. Bargain **£4 17 6**

16-mm. Bell-Howell Filmo, f/3.5, 100-ft., case. Cost £40.. **£11 11 0**

½-pl. Pressman Reflex, no lens, 1/10th to 1/1,000th, slides....57s. 6d.

½-pl. Etui Wafer Plate, f/4.5, 1 to 1/100th, slides. Carton.. **£3 17 6**

7-in. Cooke Aviar f/4.5, focus mount, reflex or Press..... **£3 17 6**

9½-mm. Pathe Kid Projector, and resistance.....35s. 0d.

½-pl. Certo Plate, f/4.5, Compur, double ex., rise, cross, slides, hide case. Excellent condition **£2 7 6**

3½×2½ T.-P. Horizontal Reflex, Dallmeyer f/4.5, latest.... **£4 9 6**

Superb Voigtlander Reflex, twin lens, Voigtlander f/3.5 Speed, D.A. Compur, the only tilting parallax lens reflex..... **£9 17 6**

G.B. Talkie Projector. Cost £135. Amazing price..... **£65 0 0**

16-mm. De Vry 1,600-ft. Projector, triple claw, 750 watt, 1,600-ft. arms (one hour show, one threading), case. Cost £54 **£29 10 0**

4½×3½ Zeiss Maximar Plate Pocket, Zeiss Dominar f/4.5, Compur, double ex., rise, cross, wire finder, slides. Carton.... **£4 17 6**

3½×2½ Kodak Regent, latest streamlined coupled range-finder camera, Tessar f/4.5, D.A. Compur, carton. Lovely camera **£13 13 0**

2-in. Dallmeyer f/1.9 Telephoto, 16-mm. Hardly used.... **£6 6 0**

Praxidos Super Enlarger, takes Leica or any size to 2½×2½, auto. focus, condensers. Cost £24. As new..... **£11 11 0**

3-in. Dallmeyer f/3.5 Telephoto. Cost £10. 16-mm..... **£5 17 6**

Movikon 16-mm. Zeiss Camera, coupled range-finder, multi speeds, D.A., etc. The finest silent cine camera, case..... **£85 0 0**

16-mm. Filmo Geared Projector, 750-watt, latest, bronze, all geared arms, case. Like new. Super bargain **£65 0 0**

3½×2½ Super Ikonta, Tessar f/4.5, D.A. Compur, coupled range-finder, 8 or 16 on 3½×2½, self-erecting. As new.... **£11 11 0**

3½×2½ Agfa Speedex Plate, f/4.5, 6-speed, latest. Carton..39s. 6d.

4×4 Automatic Rolleiflex, Tessar f/3.5, new Compur. Snip **£9 17 6**

10-in. Dallmeyer f/8 Latest Telephoto, 3½×2½ reflex. "Crazy" **£3 19 6**

16-mm. Ensign Kinecam, f/2.8, 3-speed, 100-ft., case. Cost £18 18s. **£9 17 6**

V.P. Zeiss Bebe Plate, Zeiss Tessar f/4.5, Compur, Press type, quick extension, nickel slides, case. Cost £20. Beauty.. **£4 17 6**

3½×2½ Mentor Metal Reflex, Tessar f/3.5, D.A. Compur, like Rolleiflex, but takes 3½×2½ plates, case. Like new..... **£15 15 0**

½-pl. Adams' Folding Minex Reflex, Ross Convertible f/5.5, triple ex., revolving back, sky shade, latest type. All hand made and beautiful outfit, slides, case. Cost £85 recently..... **£29 10 0**

½-pl. Graflex, f/4.5, 1/10th to 1/1,000th, F.P.A., case. Crazy price **£3 17 6**

16-mm. De Vry Famous 200-watt Projector, case. Cost £18 18s. **£9 17 6**

16-mm. Victor Latest Talkie, light-weight, 500-watt, 5-watt volume, 1,600-ft., in two very light cases. Cost £105. First **£75 0 0**

16-on-V.P. Ensign Multex, f/1.9 Xpres, latest. Bargain.. **£15 15 0**

3½×2½ Ihagee Folding Reflex, revolving back, Tessar f/3.5, latest self-capping 1935 model, case. Like new. Snip.... **£19 19 0**

V.P. Exakta Roll Film Plate Reflex, latest, Tessar f/2.8, 12 secs. to 1/1,000th, D.A., slides, screen. Like new..... **£25 0 0**

40×30 Beaded Projection Screen, more light value, in leather-covered auto.-erect. de luxe case. Bargain..... **£3 17 6**

6-in. Cooke f/3.5, reflex mount. Like new. Crazy price.. **£2 19 6**

16-mm. Keystone Bronze Camera, Dallmeyer f/1.9, 4 speeds, interchange lenses, 100-ft. Cost £18 recently. Like new.. **£9 17 6**

8-mm. Keystone Bronze Latest Projector, 200-watt, resistance **£9 17 6**

Brilliant Voigtlander Exposure Lens Meter. As new.....12s. 11d.

16-mm. Bronze Victor Turret, f/2.9, turret head, multi speeds, visual focus, reverse, 100-ft., latest, case. Cost £54. Like new **£29 10 0**

400-ft. Films 16-mm., Comedy, Travel, in cans. Few.....35s. 0d.

16-mm. Victor Projector, 750-watt, latest bronze, all movements, ready-for-action case. Cost £60. Like new. Snip.. **£29 10 0**

ANNOUNCE

That in order to advertise our unique service still more widely, we are offering each week one Second-hand Camera (tested and guaranteed), at precisely the figure we paid for it.

THIS WEEK'S BARGAIN

ZEISS CONTAX I, SONNAR LENS F/2
Ever-Ready Case.
Indistinguishable from new Catalogue price, £43. **£29:15:0**

Watch this space for next week's bargain

WHY NOT HAVE YOUR CINEMA AT HOME THIS WINTER?

A "Kodascope-Eight" Projector and Screen costs just over £12, and a splendid library of films is available.

You do not need a ciné camera to enjoy movies at home, but if you would like to see your family and friends on your own screen you can purchase a **"Cine-Kodak Eight" Camera** at any future time for under ten pounds.

● *NEWS ITEM.* ●

SEE the Kodascope-Eight, the New Regent-Kodak, the Retina-Tessar, the Range-finder Bessa, the V.P. Exakta Reflex and the All-British Multex Miniature by Ensign at

DUNSCOMBE'S CAMERA COLUMN

'SERVICE SUPREME'

NOW PASTE THIS IN YOUR ALBUM

ABOUT PROCESSING

We take great pride and care in all classes of DEVELOPING, PRINTING and ENLARGING, as well as special photographic work which is either too difficult or too much bother for other folks to do.

If you require anything out of the ordinary in the way of that maligned term "photo finishing," just let us know and we will quote by return giving fullest information.

We do NOT advocate a rush service as it is not possible to achieve the best possible results, but prefer to take our own time and do the job properly WITHOUT EXTRA CHARGE to the usual standard prices.

Extensive alterations to our plant and new equipment recently installed for high-class work by fully-trained staff.

MINIATURE PROCESSING

of all types of film emulsions (including Dufay-Leica colour films), using the finest chemicals and most suitable formula. Contact printing on continuous perforated paper. Positive film printing for projection. Contact or enlarged Lantern Slides in black-and-white or tinted finish. Enlargements from 3½×2½ to 22×16 in.

GENERAL PHOTOGRAPHIC WORK.

Copying and Reproduction Negatives by contact, reduction or enlargement. Lantern Slides from large or small negatives or prints.

Black-and-white or Toned Enlargements of all sizes supplied on any grade of Kodak or Agfa papers of customer's own choice—again without extra charge.

Originals, Negatives, Prints, Legal Documents, Drawings, Maps, etc., and all classes of private photographic work treated with absolute confidence and despatched by registered post.

Prints or Enlargements dry-mounted on mounts or in customer's own albums, and titled if desired. LARGE SELECTION of loose-leaf and bound ALBUMS at popular prices from pence to pounds.

● ● ●

Any make of camera from 5/- to £50 supplied right away for Cash, Exchange, or on Hire Purchase Terms financed entirely by this old and widely respected company.

Phone: MAYFAIR 7511 (8 lines). Also at 47, BERKELEY STREET, W.1, and 43, KENSINGTON HIGH STREET, W.8

SEE THAT IT'S A SELO FILM PACK

For efficient operation and consistent success, the film pack user can always rely on Selo Film Packs.

SELOCHROME FILM PACK for general use—multi-coated, anti-halation backed, orthochromatic.

SELO HYPERSENSITIVE PANCHROMATIC FILM PACK—the fastest fully colour corrected film made.

With Selo Film Packs there is no danger of fogging, not even at the edges. Tabs of different length prevent pulling round more than one film at a time. No need to open the pack or remove from the adapter when taking out films for development.

Obtainable from photographic dealers in the popular sizes.

Made in England by

Ilford Limited, Ilford, London

Photograph by Challoner Woods, Curling Studios, on Selo Hypersensitive Film Pack.

Printed in England for the Publishers, Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1, by The Classic Colour Press, Reading.

The Amateur Photographer can be obtained abroad from the following: United States: The International News Co., New York. France: W. H. Smith & Son, 248, Rue Rivoli, Paris; Hachette et Cie, Rue Reaumur, Paris. Belgium: W. H. Smith & Son, 71–75, Boulevard Adolphe Max, Brussels. ILFORD LIMITED
ILFORD . LONDON

Copyright—Registered as a Newspaper for transmission in the U.K.

This after-dark picture was taken with a "Brownie"

3 "Photoflood" Lamps in "Kodaflector" Reflectors were used, at the positions and distances shown in the diagram. Exposure: 1 sec. f.11. Camera: Six-20 "Brownie."

Plug a 'Photoflood' Lamp or two into the ordinary electric sockets, touch a switch, and a brilliant, highly actinic light is instantly at your command —at any time, in any room where electricity is available. Handy little 'Kodaflector' Reflectors enable you to use the light to the maximum advantage, direct it on the subject at exactly the right angle. And with Kodak Super Sensitive Panchromatic Film in your camera you can give very short exposures, because of this super-fast film's extremely high sensitivity to artificial light.

NEGATIVE STORAGE BOOKS

Carrying 36 exposures on each side of each page.

Type A, for 10 films of 36 exposures.....**5s. 6d.**
Type B, for 20 films of 36 exposures.....**8s. 9d.**
Type C, for 30 films of 36 exposures.....**12s. 6d.**

OUR NEW SERVICE

Our "MICROLUX" Service of developing in Paraphenylene-Diamine and other agents ensures the best results from your film; results which have so minute a grain size that they will enlarge twenty diameters or more without the grain becoming apparent, but owing to the nature of this development it is essential that films for "MICROLUX" development receive at least twice the normal exposure. Providing this extra exposure is given, negatives developed by our "MICROLUX" process possess a quality that cannot be equalled by ordinary methods, but to submit a film which has received merely the bare minimum exposure to this form of development will not yield good results. The latter we can also develop under the name "INDIVIDUAL" conditions, but in this case the results are not of such microscopic grain size. We offer this service, confident in the belief that it will meet the requirements of those careful workers who would always do their own processing had they the convenience.

"MICROLUX" and "INDIVIDUAL" Development Prices: Leica, Contax and similar films: For 36 exposures, 4s. 6d.; per 12 or 18 exposures, 3s. 6d. All other 6, 8, 12 or 16 exposure films (up to 3¼×2¼ size): Per film, 3s. 6d.

GUARANTEED SECOND-HANDS

WALLACE HEATON'S "OPEN" *Photographic Competition*

FOR GOOD PHOTOGRAPHY BY ANY AMATEUR WITH ANY APPARATUS

Here's a new competition in which the beginner stands as much chance as the experienced photographer. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives, except for simple "spotting" to eliminate "pinholes," etc., are eligible. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement, as always looking best in the eyes of the judges. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25 which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

No retouching, faking, or combination printing—just honest photography. No restriction of size and type of camera. ANY subject can be submitted.

£25 FIRST PRIZE 21/- WEEKLY PRIZE

The Amateur Photographer & Cinematographer

ANNUAL
Lantern-Slide Competition
1936

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in " The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in " The A.P." prize set which circulates throughout the British Isles can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that the awards are made to individual slides and not to sets ; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of " A.P." Prize Slides should hasten to do so, and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Saturday, October 31st.

Classes and Subjects.

CLASS I.—Landscape with or without figures, sea subjects and river scenery.

CLASS II.—Portrait and figure studies, whether indoor or outdoor pictures.

CLASS III.—Architecture, interior and exterior.

CLASS IV.—Flowers, fruit and other " Still-Life " subjects.

CLASS V.—Natural History subjects.

CLASS VI.—Lantern slides in colour (not hand-coloured).

CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{4} \times 3\frac{1}{4}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards ; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful ; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return ; neither can slides be returned which are not *accompanied* by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Saturday, October 31st. The slides must be well packed and addressed, " Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

Seen and not Seen

Everyone who looks at a Mezzotone print, in album, portfolio, or on Exhibition walls, can *see* its rich warmth and quality. But only the photographer who has enlarged it can appreciate the unique combination of working speed with those qualities.

THIRD EDITION —*Revised throughout*

PHOTOGRAPHY MADE EASY

By R. CHILD BAYLEY

By careful study of this book the novice with a camera will be able to get a greater proportion of successful photographs than would usually be the case. It should form as much a part of the outfit as the camera itself.

To-day...

. . . will soon be lost in a multitude of yesterdays, and the happy days of childhood will have gone by. Just as the sun appears momentarily from behind a cloud, so also the laughter of children is fleeting and impermanent.

A camera that is to record such happy occasions must be one which is ready for action almost instantly.

No camera compares in rapidity with the Contax II, with its one eyepiece for viewfinder and distance meter, and its highest shutter speed of 1/1,250th second. It is the true instrument for capturing fleeting moments of happiness. And if you also wish to be included in the picture, the delayed-action shutter release is at your service.

CONTAX II

Ask for a copy of the new publication, "Unfettered Photography," describing all Zeiss Ikon miniature cameras.

Most high-class dealers stock the Contax and will be pleased to demonstrate it without obligation.

Name of nearest stockist on request.

ZEISS IKON

For pictures in the home, in the theatre, at the races, or on the sports ground, and for landscapes, architecture and scientific work, the Contax is the ideal miniature.

ZEISS IKON LTD.

TOPICS of the Week

LAST year, when we held a special Competition for Novices with a novel series of prizes (consisting of free roll films every week for varying periods) the great number of entries exceeded our wildest expectations. This year we repeated the competition with similar prizes, and the entries are literally overwhelming. It may take several weeks before a decision can be arrived at, but all those thousands of readers who sent in prints are assured that every entry will be carefully examined and judged on its merits. Another special "A.P." Competition—devoted to the subject "Can the Camera Lie?" has also just closed, and here again an enormous number of prints have been sent in. We did not know that our readers were such experts in producing pictorial inexactitudes. The result in this competition will likewise be announced as soon as possible. In the meantime all those readers interested in Lantern Slide making are reminded of our Annual Lantern Slide Competition and that all entries must be sent in not later than Saturday, October 31st.

Accessories.

An exhibition of alpine photography at Geneva has had, as an accessory, an exhibition of climbing apparatus. Thus, in one's keenness to see a picture of a glacier, one trips over an alpenstock lying on the floor, or a study of a snow-bound chalet has below it some examples of first-aid apparatus. The idea is capable of indefinite extension. An exhibition print of a river or stream might be accompanied by so-and-so's celebrated fishing tackle, travel pictures might be accompanied by literature from the tourist agencies, and, better still, an exhibition of child portraiture might have a stall for bottles and comforters and infant foods. We commend the idea to secretaries of exhibitions as a means of making exhibitions pay. They might possibly think the commercial edge worth while, but, seriously, if anything of the kind is attempted we hope it will be restricted within certain limits. It would be ruinous to the purpose of a serious pictorial exhibition to have it accompanied by a miscellaneous and trivial bazaar.

THE END OF THE SEASON.

A topical autumn snapshot in the park, embodying a novel and effective composition.

Colour Schemes.

That colours represent emotions we all know—red for anger, green for jealousy, and so on. But the idea seems to be worked out very thoroughly in the new Tauchnitz editions on sale in Continental towns, where the book covers are in colours corresponding to the nature of the book. Thus a red cover indicates a story of adventure or crime; blue, a love story; green, travel; purple, biographies and history; yellow, psychology; grey, poetry; and orange, humour and satire. Some of these strike us as well chosen. Orange is certainly a humorous colour, and crime, of course, ought to be red or black. But love stories are surely not to be associated with the blues, and poetry should have a livelier colour than grey.

Photographing at Geneva.

A correspondent who is attending the League of Nations Assembly at Geneva writes that the palatial new buildings of the League—probably the most magnificent parliament house in the world—offer wonderful opportunities for photography. Innumerable corners of this finely impressive architecture

appeal to the eye, and at night the building is floodlit, its white façades showing to great advantage amid the surrounding green. The whole of the interior decoration is in a light key, walls, ceilings, and floors of assembly rooms, offices and corridors all being white or yellow-white. The members of the League staff who carry unobtrusive cameras have unrivalled opportunities for indoor undress pictures of international celebrities. The British Foreign Minister is always a handsome target, though no one can more successfully evade the camera if he wishes. But in addition there are Asiatic potentates and dusky sons of the equator, as well as men whose names are known in all the capitals of Europe, and the camera has been more hard-worked at Geneva than ever before. In the Assembly Hall, also, every speaker, if he is of any distinction, is likely at a warm passage in his speech to have five arc lamps above his head burst into blinding brilliance, while the low whirr of the cinematograph accompanies his peroration.

The Film the Best Commercial Traveller.

After reading Ludwell Denny's book "America conquers Britain," we feel that what the British Government ought to do forthwith is to subsidise the film industry, not merely protect it. This author assures us that the rapid Americanisation of the world's markets is due mostly to the indirect advertising value of Hollywood films. A taste and demand is created among foreign audiences for the kind of motor car used by the motion picture artist, for the style of shoes he or she wears, and for the domestic fixtures displayed. Women emulate the make-up and hairdressing styles of the film heroine, and young men affect the tailoring cut of the hero. Shop windows advertise the soap and other cosmetics which feature in the film. The film even introduces American typewriters into business offices and American gramophones into British homes. The film is by no means an unreal, fantastic thing which is wondered at and forgotten; it has its repercussions on the dressing-table, in the wardrobe, in the bathroom, on the office desk, and in the garage.

Lighting at the R.P.S. and Salon.

Possibly the outstanding difference when a comparison was made of the shows at the R.P.S. and at the Salon was the effect of the available lighting on the tone qualities of the prints on view. The gallery of the R.W.S., which houses the Salon, has a lofty skylight roof, and pictures have to be of supreme quality, strong, and with a good range of tones, to stand up to the penetrating lighting. For this reason a print of poor quality has no place in the Salon. At the Royal Photographic Society no daylight is admitted to the main exhibition room on the first floor, and the artificial lighting is not ideal. Lighter toned prints in consequence gain enormously, while strong prints look heavy and overdone; in fact, the lighting cannot do justice to a heavy, full-toned print. Exhibitors should bear this in mind for the future if they are making prints specially for the shows.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Harsh Contrasts.

I send an enlargement which is the best I can get on a fairly "soft" paper. The negative is so contrasty that there is little detail in the white dress; if I expose for the dress the face and other parts are too dark. What do you advise? H. N. (Sutton.)

If the print you send is the best you can get on a soft bromide paper the negative is certainly much too contrasty, doubtless due to over-development.

There are several methods you can adopt. You can reduce the density of the negative with ammonium persulphate, with the potassium permanganate reducer we recently described, or by bleaching and only partial redevelopment. All these involve risk to the negative, and are best avoided if you attach value to it.

As an alternative you could make a new negative. This involves some trouble and skill, but we have explained several times how a new negative can be made having either greater or less contrast than the original. In your case you require less contrast. To secure this you should expose a plate of medium speed in contact with the negative, just as you would make a bromide print, although less exposure will be required.

By increasing exposure and shortening development you can soften the result to any extent, but of course you must not overdo it. The necessary tone and detail in the white dress must be secured.

When a satisfactory transparency has been secured it is dried, and then a negative made from it by the same routine. Over the contrast of this negative you have the same control, and with a little care should be able to produce one of suitable gradation to produce an enlargement with natural and harmonious tones.

Lastly, you can enlarge from your present negative and give special treatment to the print. This may be the Sterry process recently described in detail, or you might try another method—little known but quite effective.

As in the Sterry process, you find by experiment the exposure required to bring out the high-light detail, and then give this exposure, regardless of the over-exposure of the rest. Using either amidol or M.Q., add to 10 oz. of the developer three or four drops of a 10 per cent solution of potassium iodide. This slows development, and you must judge its completion by looking through the print against the yellow light. Rinse and fix as usual.

If the contrasts are still too great, add one or two more drops of iodide, but the least excess will give a flat print with a bluish colour.

Hyperfocal Distance.

I have been told that in a non-focussing camera the lens should not be set for infinity, but for the hyperfocal distance. What does this mean? J. K. (Exmouth.)

The hyperfocal distance indicates the plane on which to focus the lens in order to secure the greatest possible range of definition of the standard decided upon. The distance depends on the focal length of the lens, the stop used, and the standard of definition chosen. Let F be the focal length of the lens, f the stop, and D the standard of definition. Then the hyperfocal distance is

$$(F \times F \times D) \div f$$

When the lens is focussed on the distance so found the definition will be up to standard from half the distance onwards. If it is considered that a minute point may be rendered as 1/200th of an inch in diameter then D would be 200, but a higher or lower standard may be adopted.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Advantages of Photographic Society Membership

The following article is opportune at the beginning of the photographic societies' winter session. It shows the various advantages of club membership, and how to secure the best from it.

THE best advice that can be given to the beginner, or in fact any photographer who wishes to progress, is that he should join a photographic society. In support of this practically every one of those photographers who have contributed to the series "How I make my Exhibition Pictures" in the pages of "The A.P." have stated that they are members of photographic societies, and they admit that their progress has in no small measure been due to membership.

A well-organised photographic society provides for the needs of all grades of amateur photographers, and, contrary to the idea sometimes expressed, beginners are always made welcome. It is fully realised that the beginners of to-day are the leaders of the not distant to-morrow, and the older members will be found quite willing to devote their time freely towards assisting the inexperienced, and to the solution of their difficulties and problems.

Except in a very few instances, where the society has been formed for the furtherance of a special object, or a definite line of work as indicated by its title, photographic societies cater for every photographic interest. While most of the members are interested in pictorial work, there are others, experts in other branches, such as colour work, stereoscopic photography, nature work, etc. These workers, by association and discussion in informal groups, afford mutual assistance.

How Clubs Help.

A glance through the "Week's Meetings" as announced in "The A.P." indicates how the individual worker is helped. Demonstrations of up-to-date photographic methods and processes, and lectures on photographic technique, while they do not figure in the syllabus as they did thirty years ago, still have their place, and much information is given in this way.

The lectures of the "popular" type, given by well-known photographers, are also helpful, apart from the subject matter, because they indicate possible subjects, and in many cases are an introduction to the possibilities of the lantern slide.

There are also competitions arranged for members of different degrees of proficiency, followed by the helpful constructive criticisms and advice from the experienced members who act as judges, which can be of the greatest value to the beginner as well as to the more advanced photographer.

Added to this there is the assistance that the older photographers are always ready to give with regard to the failures, difficulties and problems that all photographers experience from time to time.

In many cases the society offers dark-room accommodation, with the use of enlarging apparatus, lamps for portraiture, and other equipment. The photographer resident in apartments where accommodation is limited will find this of the greatest assistance.

After Joining.

The newly-elected member should attend the first available meeting of the society, and, if not already acquainted, he should make himself known to the secretary. The latter will effect introductions to the other members, and in a very short time the new amateur will find himself at home in the friendly atmosphere which is a feature of every well-organised photographic society.

The Members' Part.

It is true to say that the success of any photographic society depends upon the efforts of individual members. Every member should give loyal support to the efforts made by the officers, by regular attendance at meetings, by entering work in competitions, and subscriptions should be paid immediately they become due.

With regard to regular attendance at the meetings, it may be pointed out that if the society is able to secure the services of a lecturer, who may undertake a journey of many miles and possibly return the same night, every member should support the officials by attendance. It is embarrassing for all concerned for excuses to be made for poor attendance, the weather, sickness, and so forth, and the circumstances that call for them should be avoided.

Postal Clubs.

So far we have dealt with photographic societies which are situated in the larger centres. There are many photographers who are placed in remote situations, far from the nearest organisation. They are afforded a means of contact with their fellows by means of the postal clubs. There are numbers of these organisations, which are devoted to the various branches of photography, the members being linked up by means of circulating portfolios. Each member contributes a print as the portfolio reaches him, and there is the opportunity for comment, or criticism, that is helpful to the photographer who wishes to progress. There are also clubs devoted to specialised subjects which appeal to those interested in them. Much help has been given, and many pleasant associations formed, amongst members of these clubs who have never had the opportunity for personal meeting.

But even if a photographer joins either a local photographic society or a postal club, or both, he must not conclude that he has done all that is necessary, and that without further effort he will automatically blossom forth as a first-rate photographer and exhibitor. He must work, and work hard. The society membership is only an aid and an incentive. It is a means to an end, and not the end itself.

The harder he works, and the more progress he makes, the greater will be the interest taken in him by his fellow-members, and the more capable he will be of doing credit to his society. Further, he will soon be able to lend a hand himself in helping novices to overcome the difficulties he has now surmounted.

A list of photographic societies, including postal clubs, will be found in *Photograms of the Year*, or the Editor of "The A.P." will supply the particulars if any reader desirous of joining a society writes for the information.

FUNGI—a Fascinating Autumn Subject

By F. J. WRIGHT.

IN autumn the amateur photographer makes for the woods; because he knows that there are to be found tempting pictures of sunlit avenues bathed in rich colours and carpeted with a soft layer of leaves, and he knows that he can capture some of this beauty with reasonable care and the aid of the panchromatic films now available.

If he is successful, he gets photographs which are veritable glimpses into Fairyland. But these are, as it were, landscapes of Fairyland; if he penetrates deeper into the recesses of the woods he may hope to obtain even more intimate glimpses—pictures which may be called close-ups of Fairyland.

These are provided by the fungi which abound in the woods in autumn. Not only are fungi of many and varied shapes, and found in all kinds of positions, but they are often of hues so startling, and stand out against their background with such effectiveness, that some, at least, of the mystery can be captured on the film or plate.

It is true that fungi (pronounced, by the way, *fún-jee*) are fond of dark places, but it is often possible to direct the slanting rays of the autumn sun on them by moving aside branches which intercept the light, and, because the lens of the camera is directed somewhat downwards, it is possible to make use of light rays which come from above and directly in front.

A dark background is the most effective, and this is provided by the surrounding undergrowth. Fungi are often found at the base of trees, and the trunk, out of focus so as not to distract the eye from the main object, will serve admirably.

Fly Agaric—a poisonous fungus.

In order to get the stalks, where these occur, the camera should be placed near the ground level and supported by a stone or other object. A portrait attachment will often be necessary for the smaller subjects, and in this case care should be taken that there are no leaves or twigs, unnoticed by the eye but certainly not forgotten by the camera, in front of the lens.

The amount of exposure will vary with the light, the film used, and the stop; a small stop and a long exposure will bring out detail which is the charm of fungi to the photographer.

The most prominent order of fungi is comprised by the agarics, which include the common mushroom; there are one thousand distinct species of this order in Great Britain. Perhaps the best known of the "toadstools"—which more or less approximate to the genus *Agaricus*—is the Fly Agaric, common in birch and fir plantations. It is very poisonous, but extremely decorative, the cap being bright scarlet or reddish umber, studded with dirty white or yellowish warts.

Another fascinating fungus is the Giant Puffball, which, if undisturbed in some neglected corner, will often grow as big as a football. The Earth-star, a beautiful fungus, prefers shady spots on a sandy soil, while for inky-caps we need search no farther than the edge of the garden lawn.

An account of the features and habits of fungi cannot be given in a short article. The photographer is primarily interested in his picture, and when he gets his photograph of a startling, wrinkled object attached to the bark of a tree, or of little tables seemingly expressly designed for elves gleaming in the depths of a wood, it is easy for him to look up a reference book and name the species.

Some museums have collections of models of fungi which render identification easy, while some, again, have those beautiful coloured photographs illuminated from behind which are at once a joy and an inspiration to the photographer.

Only one word of warning is necessary. Such an unpromising subject as fungi-hunting may prove so intensely interesting that one may find that a good deal of one's time—and money—is spent in obtaining a series. Nature photographers know all about the madness that comes on when a whole gallery of potential pictures dawns on the understanding. And fungi will certainly provide weeks of active, interesting work to the amateur photographer in the autumn. They provide excellent training in technique, which will help the photographer in dealing with other subjects.

MINIATURE CAMERAS, NEW AND SECOND-HAND

When buying, exchanging or selling one's miniature camera it is undoubtedly preferable to go to the specialist about it. The staff at our shop in High Holborn are, to a man, experienced miniature photographers. They have had the opportunity to work themselves with every camera, and may be relied upon to use their experience to help our customers in every possible way.

That this fact is now generally realised is shown by the following list, which represents just a few of the miniatures we have taken in part-exchange during the last week or two for such cameras as the CONTAX II and III, the LEICA IIIa, the new ZEISS NETTAX, and the EXAKTA MODEL C (all best sellers).

When considering the purchase of a second-hand miniature camera, it is well to remember that although the prices of the cameras described in this list are fixed by us, at, in many cases, as much as £5 or £6 below that of similar apparatus offered elsewhere, a second-hand miniature camera may be purchased from us with precisely the same degree of confidence one usually associates with the purchase of new apparatus. In nine cases out of ten our second-hand cameras are in no way distinguishable from new. But whatever the external appearance, each camera, before resale, goes down to our testing department to receive the most careful checking up, and, where necessary, adjustment. This enables us to offer with each camera a guarantee of optical and mechanical perfection. OUR CAMERAS ARE CHEAPER BECAUSE WE DO BY FAR THE BIGGEST BUSINESS IN MINIATURE CAMERAS OF ANY FIRM IN GREAT BRITAIN. WITH A QUICK TURNOVER AND A SMALL, UNCOMPLICATED ORGANISATION, WE CAN AFFORD TO WORK ON A LOW PROFIT MARGIN.

LEICAS :

Leica Model IIIa, chromium, f/2 Summar lens, ever-ready case. As new.....£34 10 0
Leica Model III, chromium, f/1.9 Dallmeyer Super-Six, ever-ready case. As new.....£27 0 0
Leica Model III, chromium, f/2 Summar lens, ever-ready case. As new.....£31 10 0
Leica Model III, chromium, f/3.5 Elmar lens, ever-ready case. As new.....£24 15 0
Leica Model III, black, rigid f/2 Summar lens, ever-ready case. Practically as new.....£27 10 0
Leica Model III, black, f/3.5 Elmar lens, ever-ready case. As new.....£23 15 0
Leica Model II, black, f/2 rigid Summar lens, ever-ready case. Practically as new.....£24 15 0
Leica Model II, black, f/2.5 Hektor lens, ever-ready case. Practically as new.....£21 10 0
Leica Model II, black, f/3.5 Elmar lens, ever-ready case. As new.....£19 10 0
Leica Model I, non-interchangeable, f/2.5 Hektor lens. Very good condition £10 10 0
Leica Model I, non-interchangeable, f/3.5 Elmar. Good condition £8 8 0
15-cm. f/2.3 Astro Identoscop Special Telephoto for Leica. Cost £95. Shop-soiled only..£55 0 0
Leitz Thambar 9-cm. f/2.2, with special pigskin case. Cost £22 19s. As new.....£17 5 0
Leitz 13.5-cm. Elmar f/4.5 Lens, coupled. Excellent condition.....£11 10 0
Leitz 13.5-cm. Elmar f/4.5 Lens, uncoupled. Excellent condition £7 5 0
Leitz 13.5-cm. Hektor f/4.5 Lens, coupled. As new £13 18 6
Leitz 9-cm. f/4 Elmar, coupled, chromium. As new £8 15 0
18-cm. f/5.5 Tele-Megor, coupled for Leica. As new £17 10 0
Leitz 5-cm. f/3.5 Elmar, coupled. Excellent condition £6 0 0
Megoflex Attachment for Leica Model I....£2 5 0
4-in. f/5.6 Dallon Tele-anastigmat for Leica I..£2 10 0
Stereo Viewer for Leica. As new.....£4 18 6

CONTAXES :

Contax Model II, f/2.8 Tessar lens, ever-ready case. As new £34 10 0
Contax Model II, f/2 Sonnar lens, ever-ready case. As new £39 10 0
Contax Model I, a very special camera with latest wedge-type range-finder, f/2 Sonnar lens, lens hood, 2 filters, ever-ready case. As new.....£32 10 0
Contax Model I, latest range-finder, f/2.8 Tessar lens, ever-ready case. As new.....£23 10 0
Contax Model I, earlier range-finder, but latest shutter, f/2.8 Tessar lens, ever-ready case. As new £21 0 0
Contax Model I, as above, but fitted f/3.5 Tessar lens £18 10 0
Zeiss 13.5-cm. f/4 Sonnar Lens, for Contax. As new £16 15 0
Zeiss 12-in. f/8 Tele-Tessar, with special filter and case. Cost £48. As new £27 10 0
Plate Back for Model I Contax, £2 10s.; extra Slides, 5s. 6d. each; Copying Arm for use with Magniphot Enlarger, £2 15s.

OTHER MINIATURE CAMERAS FITTED WITH COUPLED RANGE-FINDERS.

Super Ikonta, 530/16, f/2.8 Tessar, 2 filters, ever-ready case. As new.....£22 15 0
Super Ikonta, 530/16, f/3.5 Tessar lens, ever-ready case. As new £19 15 0
Super Ikonta, 530/2, f/3.8 Tessar lens, Compur Rapid, ever-ready case. As new.....£18 17 6
Super Ikonta, 530/2, f/4.5 Tessar lens, Rapid Compur, case. As new.....£14 17 6

OTHER MINIATURE CAMERAS FITTED WITH COUPLED RANGE-FINDERS—contd.

Super Ikonta, 530/2, f/4.5 Tessar lens, Normal Compur, ever-ready case. As new.....£13 15 0
Super Nettel, f/2.8 Tessar lens, ever-ready case. As new.....£17 15 0
Super Nettel, f/3.5 Triotar lens, ever-ready case. As new.....£12 17 6
Ensign Autorange, f/4.5 Tessar, Compur, fitted especially to take plates, with three slides and focussing screen. Cost over £16. As new.....£10 10 0

CAMERAS TAKING 16 EXPOSURES ON 3¼×2¼ FILM :

Dolly Super Sport, for films and plates, f/2.8 Tessar, Rapid Compur, set of P.O. filters, F.P. adapter, 3 slides, focussing screen, extension tube, case. Cost £22 6s. As new.....£13 10 0

OUR MINIATURE PROCESSING SERVICE.

For miniature negatives, specialist processing is absolutely essential. We are the only firm in the country exclusively undertaking this kind of work, and years of experience in miniature technique enable us to produce flawless and virtually grainless negatives. We undertake two services: standard fine-grain development, for which the ordinary charge of 1s. 6d. per spool is made, and paraphenylene-diamine development, for which we charge 5s. 6d. per Leica spool. The latter service is positively the finest that at the present stage of miniature photographic technique it is possible to obtain. Extreme precautions are taken to produce superlative results, and each film is finally treated in TEITEL SCRATCH-PROOF SOLUTION, rendering it practically impervious to subsequent damage. Write to us for full particulars.

MINIATURE CAMERA REPAIR SERVICE.

We are now able to place at the disposal of miniature camera users a well-equipped repairs department. Repairs to miniature apparatus call for a high degree of technical skill, long experience and many special tools. Previously the repair of expensive miniature cameras usually meant waiting weeks—often months—while they were returned to Germany. We can now undertake practically any repair and return the apparatus within a few days. Repairs to miniature cameras only can be undertaken.

520 Zeiss Ikonta, f/4.5 Tessar, Compur. As new £7 7 6
520 Zeiss Ikonta, f/3.5 Tessar, Compur. As new £8 2 6
520 Zeiss Ikonta, f/3.5 Novar, Compur. As new £5 15 0

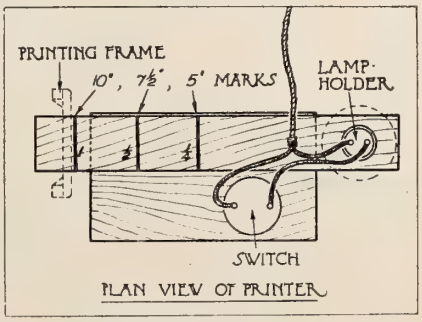
Readers' Hints, Tips and Gadgets

BETTER GASLIGHT PRINTS.

MANY people are dissatisfied with the results they obtain from gaslight printing because they will neglect the essential factor: a constant distance from the light means

better results and less waste. It is surprising how the placing of the printing frame at a different distance from the light each time can prevent a correct estimation of the exposure required.



An easily constructed piece of apparatus, which allows this essential factor to be easily observed, can be made for a modest sum.

Upon a wooden base 10×5 in. is fastened a piece 12×2 in. and at one end of the latter is placed a batten lampholder connected to a switch upon the base. Easily visible lines are marked at distances 5, 7½ and 10 in. from the lampholder. When using a quarter-plate, or smaller printing frame, I find it advisable to raise the level of the frame by an extra thickness of the 12×2 in. wood, to keep it approximately central with the bulb in the lampholder. Mark also this piece as above.

The normal exposure position of the printing frame is at the 10-in. mark.

If time is limited or the negatives somewhat dense you can speed up by using the 7½ or 5 in. mark, so requiring only half or quarter of the original exposure, yet keeping the printing distance constant. The advantage of this is particularly noticeable when printing several copies from one negative.

Another advantage of this apparatus, over the printing-box particularly, is that when printing negatives that have normal foregrounds but skies slightly too dense, or rather thin foregrounds with

normal skies, one can tilt the frame at an angle toward or from the light and so get an evenly graded and better result more easily than by card shading.

S. NICHOLSON.

A BACK-CLOTH FOR HOME PORTRAITURE.

AN inexpensive but effective back-cloth for home portraiture can be easily made from a cheap, unbleached bed-sheet, obtainable for about half-a-crown.

The sheet should be tacked to battens at top and bottom and stretched out on the floor with newspapers underneath. It is first treated with the priming used by scenery painters—a mixture of whiting and size in the proportion of 7 lb. of whiting to ¼ lb. of size. Dissolve the size in hot water and add the whiting, stirring to a smooth paste of the consistency of thick cream. This is applied fairly liberally with a whitewash brush and worked in.

When dry, the sheet is ready to be painted as desired, using water-colour powders and size in the above proportions. The simplest method is to buy a packet of grey distemper powder, add size, and paint over one side of the sheet with this. Then, while still wet, sprinkle on black water-colour powder in irregular patches and work in with the brush. The result will be a nondescript cloudy pattern well suited for your purpose—particularly if you are using a small room and your sitter has to be placed close to the wall. If the correct amount of size has been added, the colours will not rub off.

The other side of the sheet should be painted in much darker tones, thus giving you the choice of light or dark backgrounds.

When the paint is dry, fasten the top of the sheet to a batten and the bottom to a blind roller.

H. BARLOW.

A NOVEL RUBBER STOPPER.

MANY readers of "The A.P." may not know of the stoppers illustrated in the accompanying photographs. Cork is not always satisfactory for various chemicals, glass stoppers sometimes stick, and both may easily be mislaid in a dark-room.

The stopper illustrated consists of a solid rubber ball, attached by two rubber straps to a stout rubber band, which is stretched over the top of the bottle neck. It will fit any size.

To open the bottle the ball is merely pushed off its seating and pushed back after use. It seals the bottle effectively, making an airtight joint. It is easy to keep clean, wears well, cannot be mislaid, and is cheap. I found them in France about eighteen months ago, and have recently discovered that they are now obtainable in England at some of the leading stores. They are well worth the attention of the photographic dealer and chemist.

CECIL E. BANBURY.

FIGURE

The Farmyard Gate. Taken with delayed-action shutter. Note the useful foreground shadow cast by the low autumn sun.

Where figures are to be rendered on a relatively large scale the difficulty is to get them perfectly natural. Take the attitude of the old man in "The Curio Hunter." Supremely unaware of the camera (he just toddled along when we had actually set the camera to take the village street with its creeper-clad houses), he turns a good setting into a good picture. Also note "The Caller," where the figure, though actually arranged, fits equally well into a dark corner of an otherwise good subject, and lifts it from a record type of subject into the realms of pictorialism.

The Caller. The placing of the light-toned figure in the dark doorway "pulls together" what would otherwise be a scattered composition.

THE rules of composition will have taught the photographer that a "good" picture should contain but one chief interest which, when suitably placed in the picture area, draws the attention of the beholder and gives the eye and senses a feeling of serenity and satisfaction. The trained mind feels at once when confronted with a print containing several equally strong points of attraction a feeling of discord, and at all costs must this be avoided if one's efforts are to be successful.

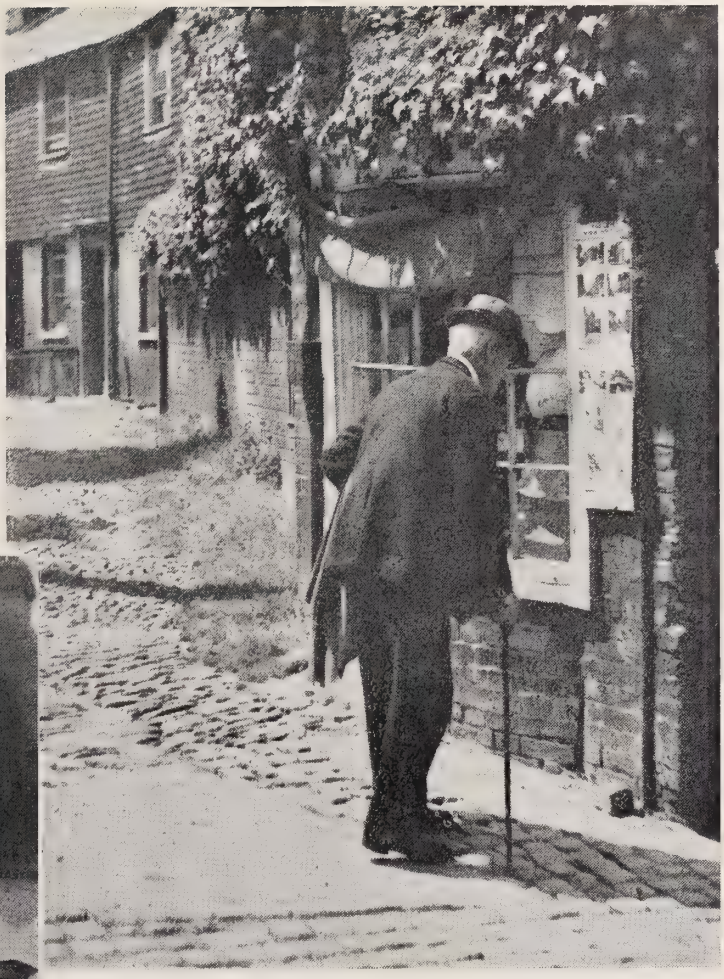
One of the most useful ways of securing this main centre of interest is by the use of a figure.

Though it is usually easy (too easy) to get a figure into your picture, the addition needs careful thought. It must always be remembered that the pull of the human interest is usually so strong that whatever else is contained in the picture becomes secondary, and also usually interdependent on what the figure is doing. The figure will dominate the scene, and unless both are in accord there will be a state of disunity in the print which will defeat the end in view. If the figure is not to be the chief interest one should see that it is only rendered on a small scale.

The figures here make a point of emphasis for the picture.

Another point one must beware of is to arrange (or secure) the figure so that it keeps the interest in the picture space. The kiddies in "Going to Post" were irresistible, but there was not time to get them coming towards the camera, so they were snapped as shown; but they hardly satisfy completely as they lead the eye and mind right out of the picture. Similarly, if you arrange your figure coming towards the camera full on it will

WORK



By F. READ.

A Phase of Outdoor Picture-making with the Camera for Sunny Autumn Days.

usually be too assertive and dominate everything else.

Whenever possible, place your figure correctly according to the accepted standards. The rule of thirds can invariably be employed, and nothing is more satisfying to the æsthetic sense than to see a suitable figure welded into the picture as the laws of art direct. The owner of one of the new shutters fitted with a delayed-action device has a means of often including himself, if necessary, in his proposed picture.

The present time of year is ideal for figure work in the open. On a sunny autumn day not only is the lighting soft but the shadows are long and generally

The Curio Hunter.
Here the figure is the principal object in the picture.

Going to Post.

can be turned to good account for picture-making. With fast panchromatic films or plates snapshot exposures for these subjects can be given.

Technique for figure work as is outlined in this note is not any different from that accorded to ordinary landscape. One important point is that the figure must be the sharpest point of the composition. Any camera will do, and the exposure for possible movement must be taken into consideration. A twenty-fifth of a second is the maximum that can be given for a walking figure, while a fiftieth is often better to make sure of perfect sharpness. With walking figures the legs should also be watched. Make the exposure when the pace is full out, as otherwise the figure may come out looking as if balanced on one leg. It will be noticed that we are considering only incidental figures, and not portraiture in the open.

At a Street Corner.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Messrs. Sands Hunter (37, Bedford Street, W.C.2) have sent for review and test one of the new "K.W." reflex cameras—the "Pilot 6." It at once gives a favourable impression, which is fully confirmed on closer examination. Outside dimensions are only $4 \times 3\frac{1}{2} \times 3$ in., and it takes 12 pictures $2\frac{1}{4}$-in. square on the 8-exposure $3\frac{1}{4} \times 2\frac{1}{4}$ spool, or 6 pictures on $2\frac{1}{4} \times 2\frac{1}{4}$ film. A lever movement brings the mirror into working position, and at the same time sets the shutter which makes the exposure as the mirror travels upwards. Speeds of 1/25th, 1/50th and 1/100th of a second, brief and time, are available. The lens focusses from 3 ft. to infinity, and the hooded screen at the top gives a full-size image, and has a magnifying lens to aid accurate focussing. A wire-frame finder is also fitted, but is out of sight when not required. The insertion and removal of the films is easily and rapidly accomplished. A wire release, sling strap and tripod bush are included. With an f/6.3 anastigmat the price is £3 13s. 6d.; with an f/4.5 it is £5 5s., and with an f/3.5 it is £7 10s. Suitable cases and filters are available as extras. For a very low-price miniature reflex the "Pilot 6" is well worth serious attention and favourable consideration. It is evidently the product of expert design and workmanship.

This year's volume of "The Year's Photography" is, in our opinion, fully up to the high standard of previous issues. It contains 68 photogravure reproductions of prints and slides shown at the 1936 R.P.S. Exhibition. Comments on the pictorial section are given by Mr. J. Dudley Johnston, and these are particularly valuable in those cases where the picture referred to is reproduced. Mr. D. C. Rowlett deals with the lantern slides, Mr. E. J. Bedford with natural history work, and Dr. E. E. Jelly with scientific exhibits and what he calls "The Chamber of Horrors." The book is published by the R.P.S., and is obtainable through booksellers and photographic dealers at 2s. 6d., or bound in cloth at 5s. Postage on the two editions is 6d. and 9d. respectively.

The Polytechnic Photographic Society, which is affiliated to the Royal Photographic Society, has now commenced its winter season with greatly increased facilities. These now consist of two enlarging dark-rooms with six enlargers, an ordinary dark-room, and also equipment for portraiture. Meetings are held every Friday evening in the School of Photography at the Polytechnic, Regent Street, W.1. Both beginners and advanced workers are welcome, and application for membership should be made to the Hon. Secretary, Mr. Desmond A. Feldman, 30, Ashworth Road, W.9.

The latest winner of the Wallace Heaton Weekly Competition was Mr. S. Cassetto, of 16, Av. Eng. Weinolder, Schaerbech, Brussels, to whom an award of 21s. has been made. Full particulars of this competition are published each week in our advertisement pages.

An exhibition of the photographic work of the late Herbert Lambert of Bath, and managing director of Messrs. Elliott & Fry, Ltd., is now open at the Camera Club, 17, John Street, Adelphi, London, W.C., and remains open until Saturday, 24th October, 1936. The exhibition will be open to the public daily, from 11 a.m. to 6.30 p.m., except Sundays. Admission is free.

The annual ciné film competition of the Scottish Photographic Federation was adjudicated by Mr. Allan J. Harper, of Leith, and from a large entry Mr. Harper awarded the Brewster Trophy to Mr. James Baxter, of Wishaw, who is a member of the Motherwell Y.M.C.A. Camera Club, for his film, entitled "The Road to the Isles."

"Alpine Wonderland" is an impressive volume just published at 18s. by Messrs. Chapman & Hall. It contains some 250 reproductions of photographs selected by Dr. J. J. Schätz, the printing of the plates being done in Germany. It is not perhaps surprising, therefore, that no work of British Alpine photographers is included. The book deals very adequately with the whole series of Alpine ranges from Yugoslavia to Savoy and Dauphiny. An interesting and informative introduction is from the pen of Sir Claud Schuster.

Lost, on a Worthing train on October 4th, a Rolleiflex Camera, No. 134822. A reward for its recovery is offered by Mr. Posgate, 72, Mansfield Road, Luton.

MINIATURE ENLARGERS

For the miniature photographer a correctly designed enlarger is essential, as enlarging from miniature negatives, like all other branches of miniature photography, calls for the application of its own special technique if perfect results are to be obtained. The purchase of an enlarger from R. G. Lewis is in itself a guarantee of satisfaction. As miniature camera specialists we exercise as much concern in the selection of the miniature enlargers we stock as we do about the cameras themselves. In all we keep some twenty different kinds of miniature enlargers, and shall be very pleased to advise at any time on the choice of a suitable one.

The accompanying illustrations show the Focomat and Valoy enlargers, both of which take the lens from the Leica camera.

Of the Focomat we cannot think of any more conclusive argument in its favour than to say that we use this enlarger exclusively for enlargements from all Leica size negatives in our special processing service. The Focomat Enlarger is fully automatic, giving a maximum magnification of ten diameters with the short upright, or about twenty diameters with the special 40-in. column which is available at an extra charge. The most outstanding feature in its design is that it takes Leica negatives in strip form without employing the usual glass plate type of negative holder. This obviates the necessity of keeping four glass surfaces scrupulously clean—a bugbear with most enlargers. A single condenser is employed, providing a soft but absolutely even illumination. This method also suppresses grain as far as is possible and eliminates very fine scratches on the negative. The enlarger may be instantly converted for power lighting by the addition of a special frosted condenser (price £1) and the use of a special projection lamp (12s. 6d.). In general principle the Valoy corresponds exactly to the Focomat, differing only in that it is non-automatic.

PRICES: (without lens)
FOCOMAT..£16 6 6
VALOY.....£9 11 6

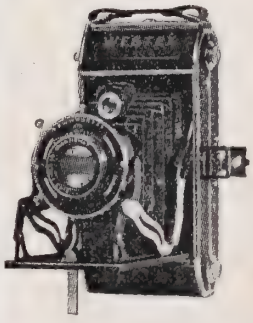
Continued Pre-eminence:

In its service and facilities for camera-buyers, "the Westminster" has achieved a reputation all its own. The same distinguishing qualities will be found in connection with amateur ciné apparatus. At the Westminster the most modern ciné cameras, projectors and the various etceteras are always there awaiting your inspection—together with EXCHANGE and OUT-OF-INCOME arrangements that offer you special and exclusive advantages.

FOTH-FLEX—with f/2.5 lens

Marvellous Value
Splendid Offer

Twin-lens reflex taking 12 pictures 2¼ × 2¼ on normal 2¼ × 3¼ film. With f/2.5 Foth anastigmat, automatic film counter, focussing magnifier, focal-plane shutter, giving exposures 1 to 1/500th sec. and Time, with delayed-action movement.



Price only .. **£13:10:0**

Nine monthly payments of 29/4.

Also with f/3.5 Foth anastigmat, as above, at.... **£10:7:6**

'WESTEX' Roll Film Cameras

Quite Unbeatable

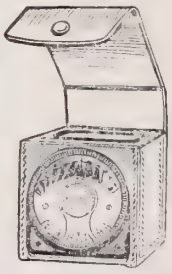
"WESTEX Four-Five"

Takes 8 or 16 on normal 3¼ × 2¼ film. Very highest quality in every detail. Superb f/4.5 anastigmat, giving exceptionally fine definition, in focussing mount, delayed-action Prontor II shutter, 1 to 1/150th sec., T. and B. Sturdy all-metal body, plated edges, best leather covering and bellows. Quick self-erecting front. Optical direct-vision and brilliant waist-level finders. Hinged easy-loading back, panchromatic safety windows. Easy and delightful to handle, yet suitable for the most advanced work anywhere. By far the best all-round value offered. Obtainable only at the Westminster.

£4:8:9

Nine monthly payments of 10/5.

Velvet-lined Leather Case, 6/9 extra.



"WESTEX Junior"

8 pictures 3¼ × 2¼ on standard film. Fine f/6.3 anastigmat in focussing mount. Self-erecting front, ready at a touch, direct-vision and brilliant finders. Quite unparalleled at its price.

42/6

Nine monthly payments of 5/3.

'PICOSCOP'

New Electric Cell Exposure Meter

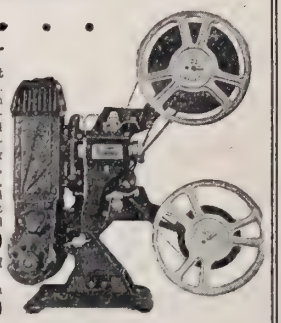
Direct and immediate readings from 1/4,000th sec. to 2 mins. Instant adaptation to any plate/film speed and lens stop. Compact, light, simple and most accurate. In ever-ready case.

Only 59s. 6d.

Nine monthly payments of 7/-.

NEW PATHÉSCOPE 9.5-mm. Motocamera

Model "H"



Remarkably compact and simple to load, and loaded in a few seconds. Size 4¾ in. square by 2¼ in. thick, weighs only 2¼ lb. Taylor, Taylor and Hobson f/2.5 lens. Extra smooth-running silent mechanism, single pictures at will.

£6:6:0

Nine monthly payments of 14/9.

PATHÉSCOPE 200-B

9.5-mm. Projector

Highly efficient 200-watt direct lighting system, giving a brilliant screen picture 10 ft. wide. Flickerless projection. Fan-cooled and asbestos-lined lamphouse. Universal tilting movement. Motor rewind, A.C. or D.C. supply, complete with lamp and motor drive for 100-volt circuit, 300-ft. empty reel and flex. **£15:0:0**

Nine monthly payments of 35/-.

Resistance for use on voltages 200 to 250, extra **£1:15:0**

'FILMAREX' & 'FAM' (Automatic) Vertical Enlargers

F/4.5 anastigmat, one-hand lever rise and fall, with automatic locking, in three models for negatives up to 4×4 cm., 6×6 cm. and 3¼ × 2¼.

Model 1, 4×4 cm., enlarges 2 to 10 times linear. Complete with condenser..... **£9:13:6**

Nine monthly payments of 22/7.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

how I make my EXHIBITION PICTURES

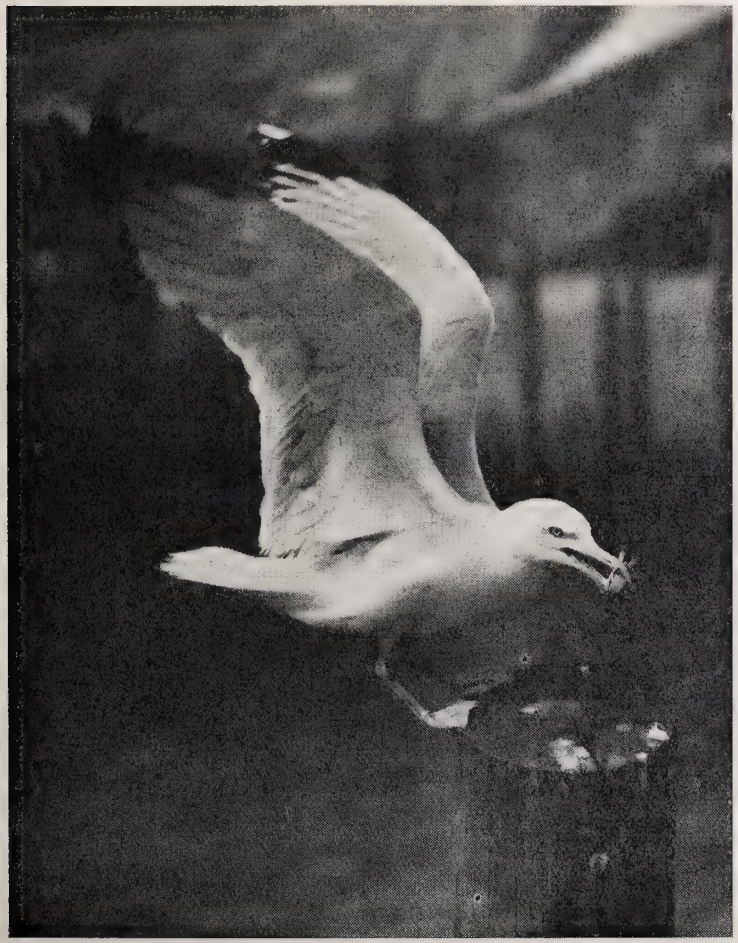
Methods and Ideals of well-known Pictorial Workers.

No. CCCLV.

Mr. A. H. DURRANT.

From information communicated to our Special Representative.

"IT may be said that I follow in the footsteps of my father, who was a keen photographer over thirty years ago. Suffice it to say that from his old negatives I learned to make my first prints on home-made blue paper. Nowadays I use a quarter-plate T.-P. reflex for studio work and also for outdoor work where possible. For holidays my favourite is a 6×6 Rolleicord which yields excellent results whilst not being cumbersome to carry. Panchromatic material, exposed through an 'Alpha' filter when necessary, is invariably used—Ilford Soft Gradation plates for the T.-P. reflex and Panatomic film for the Rolleicord.



"I do not specialise in any one branch of work, but seek subjects from any material or ideas which appeal to me. Portrait subjects are carefully studied and lighted with the object of suggesting character, whilst I sometimes add a suitable background to help the composition. To me portraiture is fascinating work, as one has the lighting and modelling under complete control.

"The viewpoints of landscapes and seascapes are carefully selected to obtain the maximum pictorial effect under the prevailing lighting conditions. Skies play an important part in many of my pictures, and I often wait for suitable cloud formations before exposing. The sensitive materials I use are so good, and I know them so well, that I find it easy to give correct exposures without the aid of a meter. I may say that I always give a full exposure.
